OpenAIRE PROVIDE – recent news & reminders

Broker service

New API to access the metadata enrichments.

(check beta.develop.openaire.eu)

New OpenAIRE Factsheets

For Content Providers managers

Multi user access

New developments on beta.

Will be released on production in coming weeks (March).

Usage Counts

Graphs updated on beta.

To be released in production in coming days.

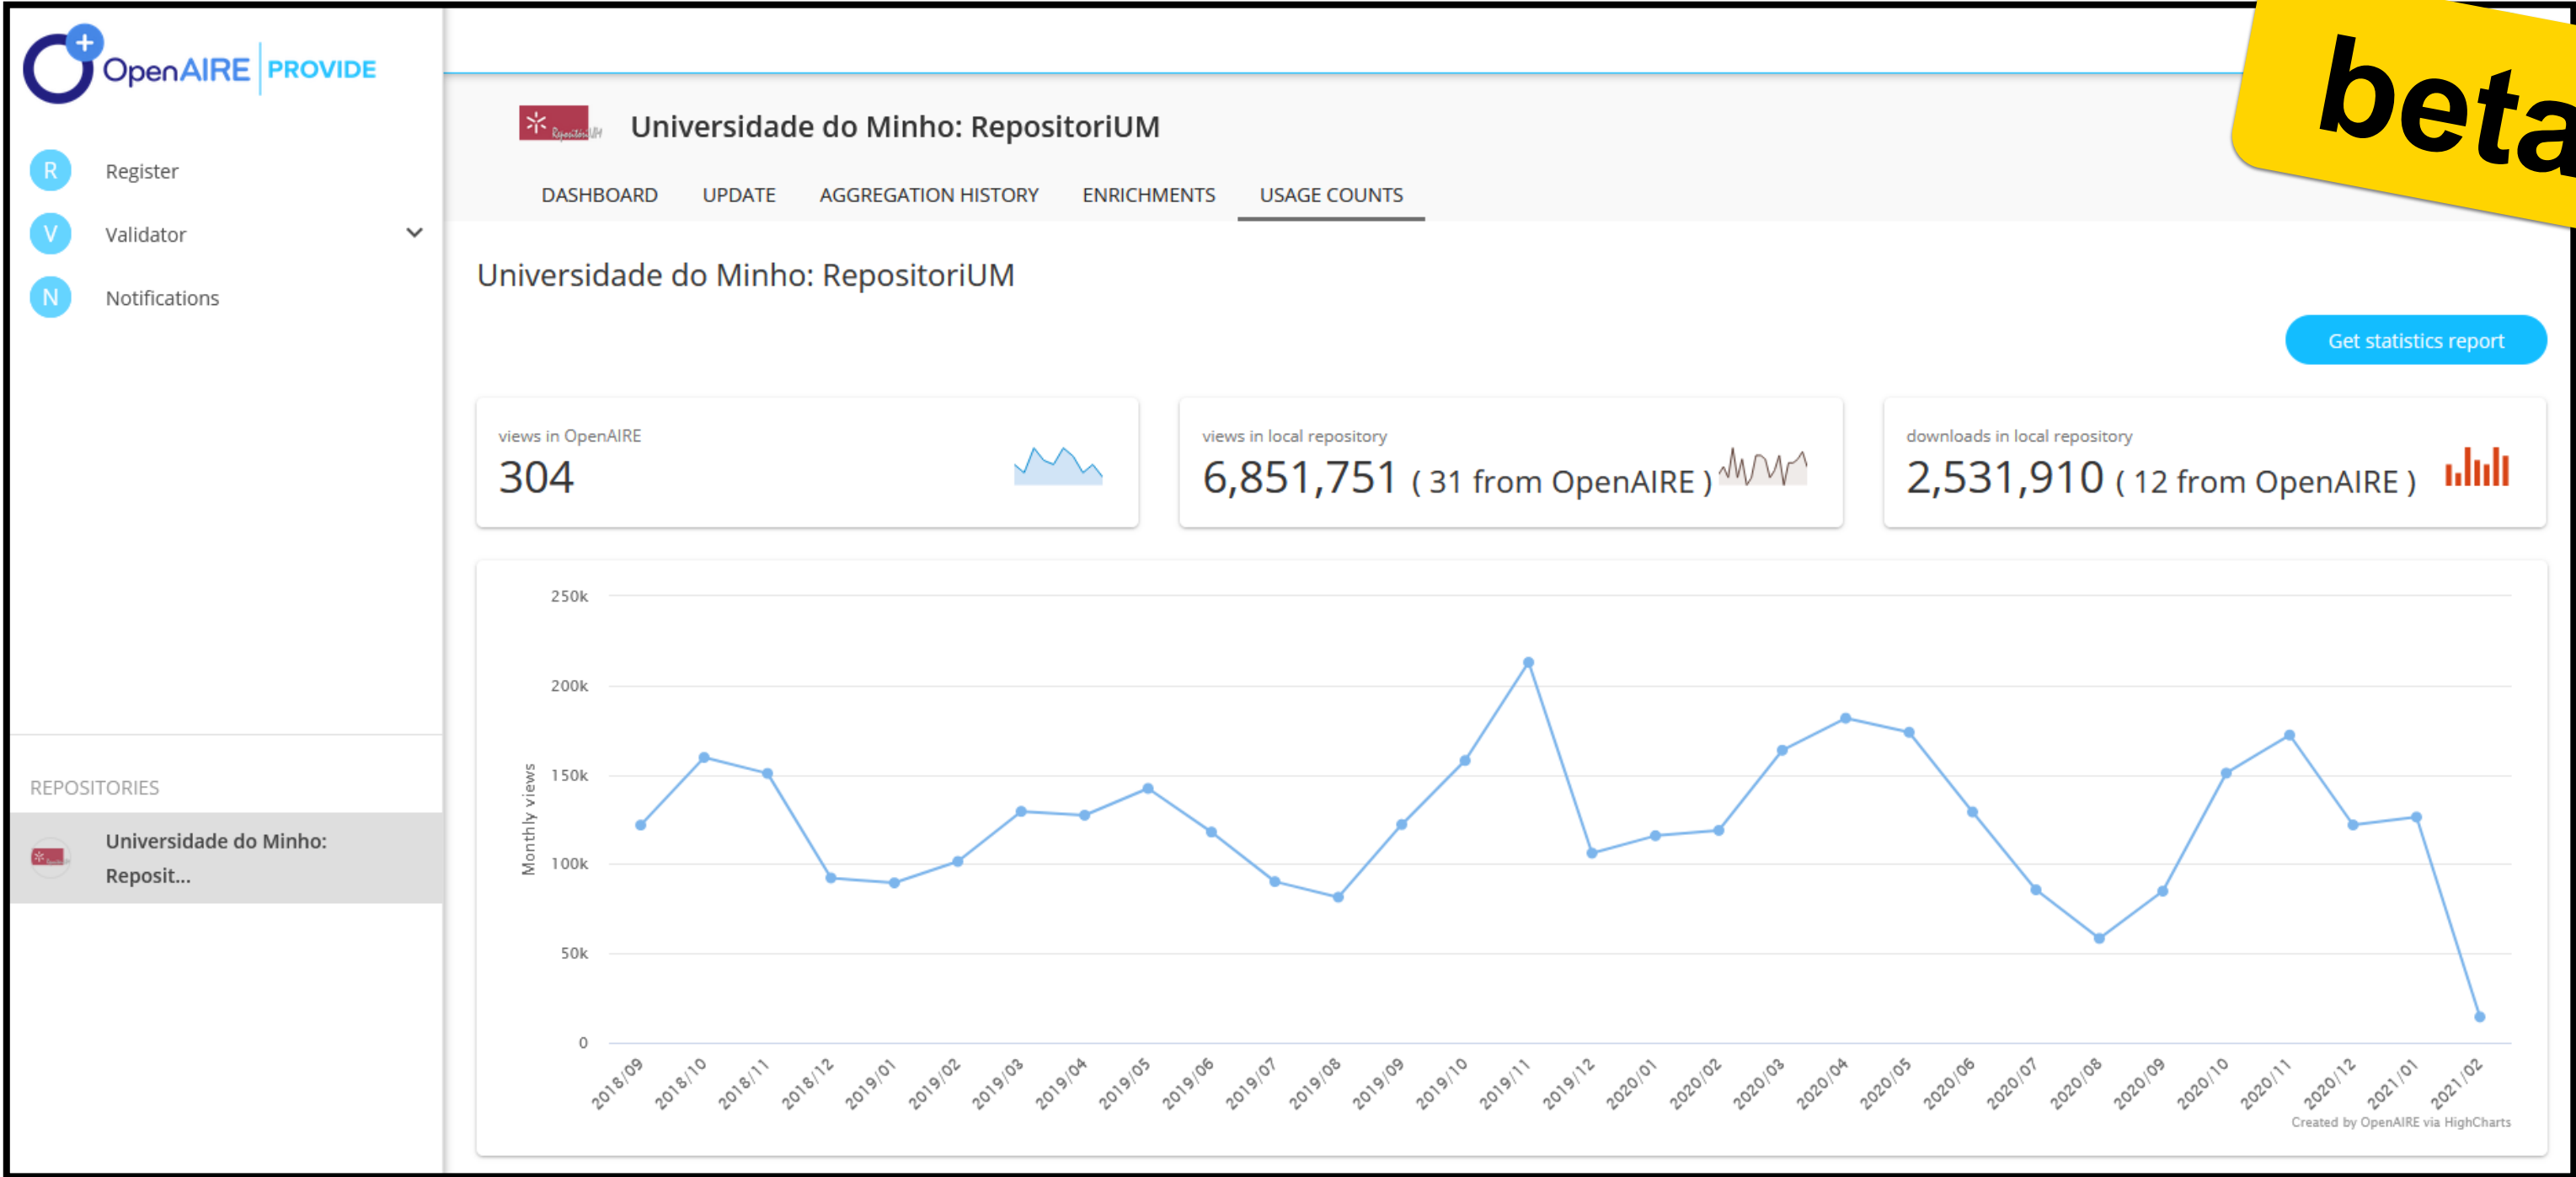

MULTI USER ACCESS

beta

The screenshot shows the OpenAIRE PROVIDE interface for the 'Universidade do Minho: RepositoriUM' repository. The left sidebar contains navigation options: Register, Validator, and Notifications. The main content area is titled 'UPDATE ADMINS' and includes a message: 'This is a mock representation of the update admins functionality coming soon..'. Below this message, there is a list of admin emails: 'admin1@gmail.com' and 'admin2@gmail.com'. Each email has a 'Remove' button next to it. A blue 'Invite admin' button is also visible.

USAGE COUNTS: GRAPHS UPDATED

Factsheets for Content Providers managers

OpenAIRE Factsheets | www.openaire.eu

Open Access and Open Data in Horizon 2020 How can OpenAIRE help?

Factsheet for Repository Managers

Why should you and your repository care about EC's Open Access Mandate?

The OpenAIRE infrastructure collects all Open Access (OA) content, Europe-wide. It also supports the EC's H2020 OA mandate. Are you a repository manager with OA content, or EC-funded projects at your institution? Read on for how to join the OpenAIRE network to make your content more visible and/or adhere to the OA mandate.

The OpenAIRE network is **growing** with currently over **1000** repositories.
Join up!

Instructions for: Literature repository managers

1. Create an account in OpenAIRE PROVIDE
<https://provide.openaire.eu>
2. Make sure your repository is registered in OpenDOAR
<http://www.opendoar.org>
3. Run a compatibility test via the Validator and check if your repository is compliant with the OpenAIRE Guidelines for literature repositories.
4. If validation succeeds, register your repository for regular aggregation and indexing in OpenAIRE.

That's it! 

And for Research Data repository managers

1. Create an account in OpenAIRE PROVIDE
<https://provide.openaire.eu>
2. Make sure your repository is registered in re3data
<https://re3data.org>
3. Run a compatibility test via the Validator and check if your repository is compliant with the OpenAIRE Guidelines for data repositories.
4. If validation succeeds, register your repository for regular aggregation and indexing in OpenAIRE.

That's it! 

OpenAIRE Guidelines: what are they?

<https://guidelines.openaire.eu>

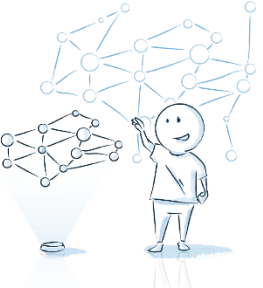

OpenAIRE Guidelines provide recommendations to repository and other scientific information data managers for the encoding of bibliographic metadata. There are three categories of Guidelines, which have adopted established and existing practices for different classes of data providers:

- i) Literature Repositories using Dublin Core,
- ii) Data Repositories using Datacite Schema,
- iii) CRIS systems based on CERIF-XML.

The OpenAIRE Guidelines require that your repository adheres to low-barrier metadata requirements and exposes:

- Funding information bodies & project grant IDs;
- Rights information and access mode;
- Embargo end date if applicable;
- Persistent identifiers for publications & datasets.

The guidelines are backwardly compatible with previous versions, but we encourage you to upgrade in order to meet the H2020 mandate requirements.

OpenAIRE | PROVIDE

Content Provider Dashboard

a one-stop-service where content providers interact with OpenAIRE and become a building block of a global Open Research community

FACTSHEET FOR REPOSITORY MANAGERS AND CONTENT PROVIDERS

What is Content Provider Dashboard?

The OpenAIRE Content Provider Dashboard - CPD <https://provide.openaire.eu> is a one-stop-shop web service where content providers (repository, data archive, journal, aggregator, CRIS system) interact with OpenAIRE. It provides the front-end access to many of OpenAIRE's backend services.

What is for?

-  **Register - Validate** data source against OpenAIRE guidelines (via the **OpenAIRE Validator**); register in OpenAIRE; provide links to content for text and data mining; view history of validations, status of harvesting.
-  **Enrich** - subscribe and view/receive notifications to enrich the metadata or the content of the data source (via the **OpenAIRE Broker**).
-  **Assess** - subscribe to the **OpenAIRE Usage Counts service**; view aggregated, cleaned usage stats for repository access (COUNTER rules, latest robots.txt).

Benefits for repositories

- ▶ **Extending repository metadata models to Open Science practices**
Promoting addition of links from/to products of any kind.
- ▶ **Keeping their collection up-to-date: alerts, enrichments, additions**
"Almost real-time" exchange of information: notifications about links to other products, missing properties, missing products, and possible errors in the metadata.
- ▶ **Fostering notification-based and federated dissemination of knowledge**
Promoting repositories as pro-active and interactive elements of the scholarly communication Infrastructure.

PROVIDE Dashboard

Integrated interface services for Repository Managers
Make your content visible, richer

OpenAIRE Open Innovation Programme

CONTENT PROVIDERS Community Calls

3rd March 2021

Project goals

The project implements **two services for DSpace/DSpace-CRIS** to enhance local data with information in the OpenAIRE Research Graph.

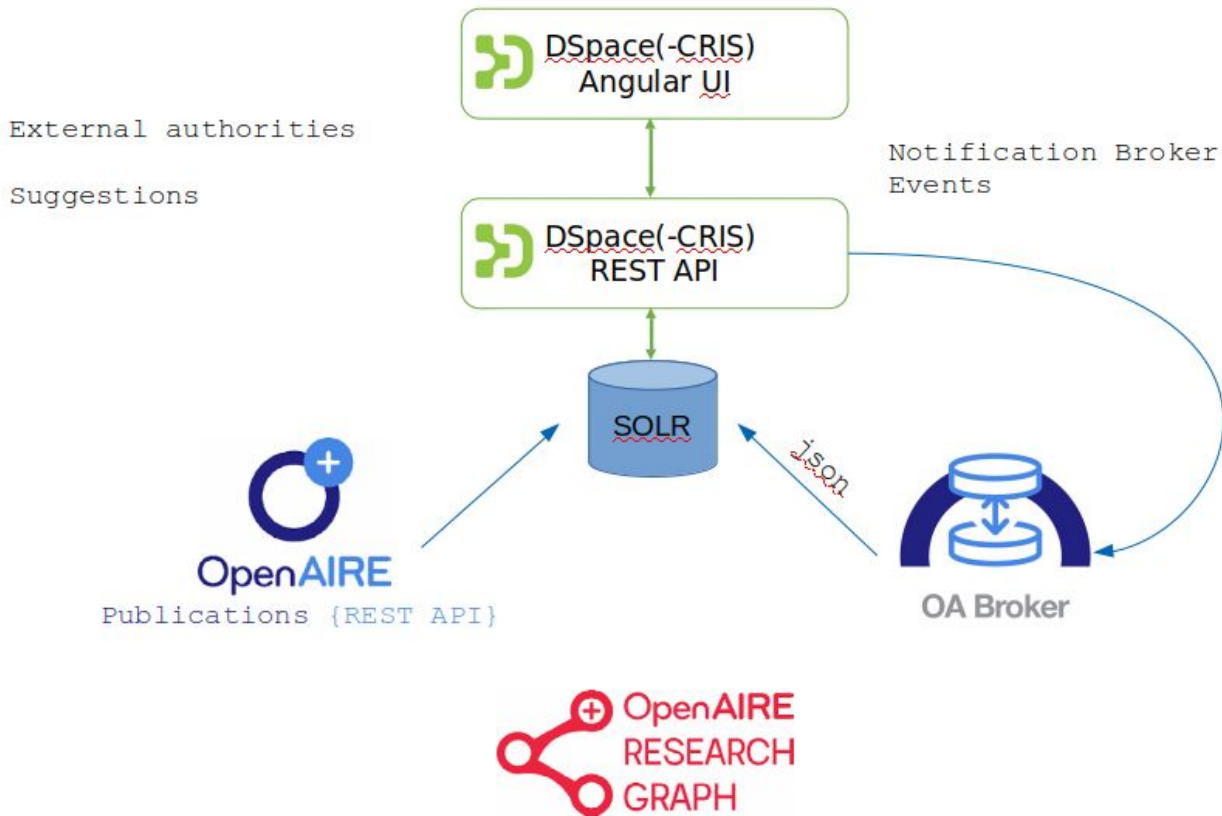

More specifically, one service, the **Data Correction**, aims to improve existing data in the repository using feedback that OpenAIRE makes available via the Notification Broker Service, such as missing or additional metadata (abstract, subjects, PIDs, projects).

The other service, **Publication claim**, is focussed on identifying publications that are missing in the repository.

Results

- ✓ The 2 product features have been implemented
- ✓ The [documentation website](#) is available and updated
- ✓ The source code is on GitHub ([REST](#), [Angular](#), [REST Contract](#))
- ✓ Automatic tests are in place for both the [backend](#) and the [frontend](#)
- ✓ A pilot installation has been performed with data from a [real repository](#) involving the owner Institution (University of Trieste)
- ✓ Acceptance Test Plan is available and verified also on the pilot instance

Product architecture

Data Correction

Scenario 1: The manager of a repository indexed in OpenAIRE can subscribe the events for Missed/More PIDs and Project links in the Content Provider Dashboard, using “a repository callback” as notification mechanism instead of the current email alert. They login in the repository and see the list of events received, among others one publication that has a PMID that was unknown to the repository and a link to a project. They click on the “accept the suggestion” button and the new information is stored in the local record. OpenAIRE could “flag” the data as confirmed.

Publication Claim

Scenario 2: A new researcher joins the institution and logs in for the first time in the repository. The Publication Claim service finds most of their publications in the OpenAIRE network and prompts for import. The researcher reviews the list, confirms the authorship and imports the publications saving a significant amount of (often publicly payed) time. Moreover, the authorship confirmation will come back later to OpenAIRE offering useful information about data quality and potential enrichments. The same applies for publications authored by researchers in different institutes, having the data in multiple repositories makes the data more reliable and raises the chance to get more information and content from any of the authors.

Pilot feedback - Data Correction Service

“A great improvement for the BrokerService. Finally the Suggested data in the place where I need them: directly in my Repository. The great integration helps the Repository Manager to quickly decide and enrich Repository Data directly in the environment that is used to work and manage. It’s like an “all in one” solution.”

*Jordan Piščanc
Repository Manager of the University of Trieste*

Pilot feedback - Publication Claim Service

“The first real practical usage of the great potentiality of the OpenAIRE Research Graph that I see. The great thing that also this service is directly integrated in my Repository. This will be a real ‘time saver’ for the Researcher: when they login to the Repository the Publication Claim Service will ‘suggest’ them new publications found in Research Graph ready to be automatically imported.”

*Jordan Piščanc
Repository Manager of the University of Trieste*

repository

Suggestion for the OpenAIRE Tech team

Data Correction Service

1. The JSON files should be pushed directly to the repository or at least be available as a download option over the OpenAIRE content dashboard
2. The JSON should contain the same information used in the OpenAIRE content dashboard as for instance the Source of the event

Publication Claim

1. The REST API should work properly also with unicode characters
2. A REST endpoint to mimic the explore portal fuzzy search should be provided avoiding the need to guess or ask the user which index use (author, title, etc)

Authors:

Bollini, Andrea

Abstract:

This article shows the reengineering of the persistence tier of the open source software DSpace, to introduce a lower coupling in its software layers. The prototype was made using design patterns and standards from J2EE world: Domain Store, Session Façade, Application Service, JPA were also introduced for a technological upgrade of the platform. The research and development activity aimed at this goal was accomplished in a stage offered by CILEA to achieve a degree in Computer Science Engineering, an opportunity that CILEA offers on several innovative ICT themes, with the support of its experts.

API usage [by opendoar ID]

1. Users should request the generation of precompiled enrichment records to helpdesk@openaire.eu indicating the requested OpenDOAR ID.
2. A newline delimited JSON record file will be made available for the user to download. It will contain the enrichments relative to *all* the existing subscriptions for the given repository.

API usage [by subscription]

[beta.develop.openaire.eu/broker.html]

The following commands indicates how the broker API documented at api.openaire.eu/broker can be used to access the set of enrichments

1. get the list of subscriptions for a given subscriber, e.g.

```
curl -X GET --header 'Accept: application/json'  
'https://api.openaire.eu/broker/subscriptions?email=[subscriber_email]'
```

2. extract the subscription ID and use it to access the 1st page of enrichment notification records

```
curl -X GET --header 'Accept: application/json'  
'https://api.openaire.eu/broker/scroll/notifications/bySubscriptionId/[sub-1234]'
```

3. extract the scroll ID from the response to request subsequent pages

```
curl -X GET --header 'Accept: application/json'  
'https://api.openaire.eu/broker/scroll/notifications/[scroll_id]'
```

API usage [by subscription]

[beta.develop.openaire.eu/broker.html]

The following commands indicates how the broker API documented at api.openaire.eu/broker can be used to access the set of enrichments

API client @ github.com/openaire

1. get the list of subscriptions for a given subscriber, e.g.

```
curl -X GET --header 'Accept: application/json'  
'https://api.openaire.eu/broker/subscriptions?email=[subscriber_email]'
```

2. extract the subscription ID and use it to access the 1st page of enrichment notification records

```
curl -X GET --header 'Accept: application/json'  
'https://api.openaire.eu/broker/scroll/notifications/bySubscriptionId/[sub-1234]'
```

3. extract the scroll ID from the response to request subsequent pages

```
curl -X GET --header 'Accept: application/json'  
'https://api.openaire.eu/broker/scroll/notifications/[scroll_id]'
```

Thank you!

 Content Providers News no.14
03 March 2021

Join the 12th OpenAIRE Content Providers Community Call

Upcoming meeting: 3rd of March at 14h30 CET

OpenAIRE runs a series of regular online community calls for all OpenAIRE content provider managers. We welcome any feedback from users. The aim of the calls is to provide clear and accurate information on our infrastructure and service developments.

"OpenAIRE CONTENT PROVIDERS COMMUNITY CALLS"

Are you a content provider? Got questions? Come and learn more! OpenAIRE is running a series of regular online community calls targeting all OpenAIRE content providers managers.

Every month, on the first Wednesday 14h30 CET

Upcoming releases
Questions and comments
Recent developments

The main topic of the upcoming meeting will be on the results from the "Enrich Local Data via the OpenAIRE Graph" Project: Bring Innovation to DSpace. Specifically it will be about the integration of the Broker service in DSpace CRIS and DSpace7, developed by 4Science as a result of the Open Innovation Call promoted by OpenAIRE.

The Community calls are open to all OpenAIRE content provider managers and we welcome any feedback from users. This is an opportunity to present and discuss recent developments from OpenAIRE, upcoming releases from the Provide related services and other relevant topics.

Support materials on the usage of OpenAIRE services for content providers

[Check out the new and updated factsheets](#)

OpenAIRE Open Science helpdesk services offers a set of diversified materials, to support the community on the usage of OpenAIRE services and to adopt the best practices on Open Science. On the continuous process of updating and creating new materials, we published one new factsheet focused on the OpenAIRE Provide dashboard, and another one updated, focused on how repositories can join the OpenAIRE network and adopt the best practices to make their content more visible and/or adhere to the Open Access mandate.

And these materials, you can find a diversified set of support resources to help you on the usage of OpenAIRE services on the adoption of best practices on Open Science, such as use cases, FAQs, webinars and workshops presentations and recordings.
