1 The ISI-Trademark Data Collection (ISI-TM)

The ISI-Trademark Data Collection (ISI-TM) provides detailed information on trademarks filed at the EUIPO and at the USPTO. It includes information on all trademarks filed at the EUIPO since 1996 and at the USPTO since the early 19th century onwards. The data provided are the trademark number, as a unique identifier, applicant and representative information, several relevant dates (application, registration,...), trademark type (word, figurative, sound,...), the language of the trademark, information on opposition and information on relevant classifications. The trademark information is processed and set-up into an Oracle relational database system (RDBMS). The ISI-Trademark Data Collection (ISI-TM) offers using trademarks as a complementary and relatively "close to the market" indicator for new products and innovation activities, especially in the service sector. It offers the possibility to be linked to other datasets at the organizational level, within the RCF as well as externally.

2 The EUIPO Trademark Database Module

2.1 Basic Characteristics

The EUIPO Trademark database is created on the basis of all trademark filings at the European Union Intellectual Property Office (EUIPO). The EUIPO provides .xml data, which is processed and set-up into an Oracle relational database system (RDBMS). It includes information on all trademarks filed at the EUIPO since 1996. Overall, there are 1,887,238 million filings.

The basic information covered in the database is the following:

Bibliographic information

- Trademark number (ID) --> the application number of the trademark
- Applicant/owner, incl. address --> the name and address of the trademark applicant
- Representative, incl. address --> the name and address of the representative who filed the trademark
- Dates (application, registration,...) --> several dates, associated with the trademark
- Type (word, figurative, sound,...) --> the type of the trademark
- Language --> the language of the trademark
- Opposition --> information whether an opposition has been filed against the trademark

Classifications

- 45 NICE classes
- Vienna classes (figurative elements)

The database is updated periodically (annually) and new information from the EUIPO is added. The database is developed and maintained by Fraunhofer ISI. The database is located on the servers of Fraunhofer ISI in Karlsruhe, Germany.

2.2 Database content

2.2.1 Definition and description of observations

The observations included in the database are single trademarks, uniquely identified by an application number. In the most recent (October 2019) version, 1,887,238 million filings are included.

2.2.2 Data acquisition and processing

a) Data sources

EUIPO Open Dataset Download

<https://eipo.europa.eu/ohimportal/en/open-data>

- xml Datafile for each Trademark from 1996 - onwards (1738984 files October2019)
- xml Datafile for each Applicant (1028501 files October2019)
- xml Datafile for each Representative (90479 files October2019)

b) Data processing:

- extracting all relevant information using a `xml_to_csv` converter tool
- loading the data into the tables

2.2.3 Information on all variables/indicators

For a more detailed description of all indicators, please refer to section 3.2 below.

2.2.5 Quality and accuracy of data

Since the October 2019 version, the representative names, address information, web contact information are no longer available. That means all data are fully anonymized.

2.3 Technical Specifications

2.3.1 Information on the data base system

The database system used is based on the relational database management system (RDBMS) from Oracle. It allows for an intensive usage and can easily be accessed.

2.3.2 Technical variable definition

2.3.3 Description of the Entity Relationship Model

All tables can be related via unique identifiers, i.e. trademark application number, in the respective tables.

Database Tables

- **trd101_main:** main table of the database including information about the trademark status, relevant trademark dates (for example application, registration, expiry dates), trademark kind, trademark name and trademark feature
- **trd102_app_detail:** contains information about the trademark applicant, including organization name, applicant name, country codes and address information
- **trd102_rep_detail:** contains anonymized information about the representative and the country code of the representative
- **trd102_app_id:** includes all trademark application numbers combined with the corresponding ID of the applicant
- **trd102_rep_id:** includes all trademark application numbers combined with the corresponding ID of the representative
- **trd109_nice_class:** includes all trademark application numbers with their corresponding nice classes (classification of goods and services applied for the registration of marks) and additional goods and services description
- **trd109_vienna_class:** includes all trademark application numbers with their corresponding vienna classes (classification of the figurative elements of marks)

This project is funded by the European Union
under Horizon2020 Research and Innovation
Programme Grant Agreement n°824091

- **trd111_pub:** contains all trademark application numbers with information about the publication section the publication date
- **trd131_opposition_detail:** includes all trademark application numbers with existing information about the opposition date, opposition text and the opponent ID which is the ID of the applicant and the ID of the representative

3 The USPTO Trademark Database Module

3.1 Basic Characteristics

The USPTO Trademark database is created on the basis of all trademark filings at the United States Patent and Trademark Office (USPTO). The USPTO provides .csv data, which is processed and set-up into an Oracle relational database system (RDBMS). It includes information on all trademarks filed at the USPTO since the early 19th century, covering 8,508,501 filings.

The basic information covered in the database is the following:

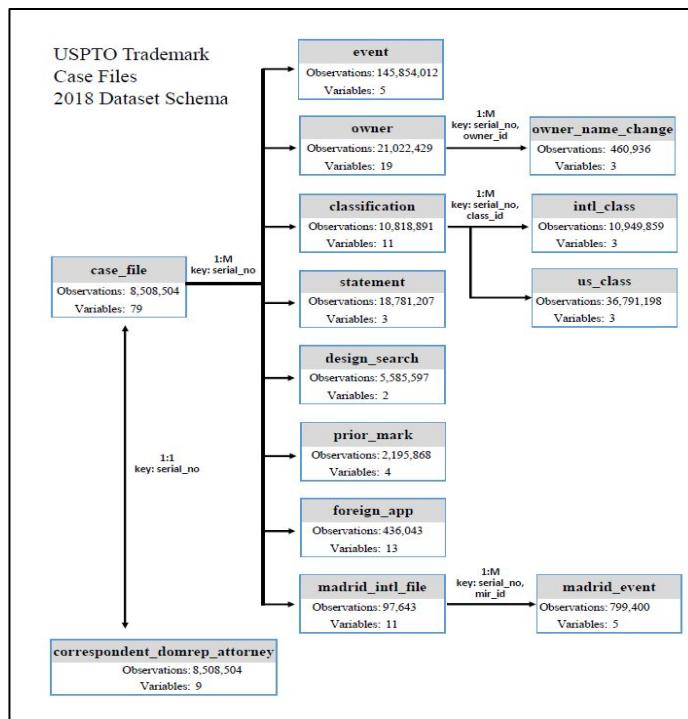

Bibliographic information

- Trademark number (ID) --> the application number of the trademark
- Applicant/owner, incl. address --> the name and address of the trademark applicant
- Dates (application, registration,...) --> several dates, associated with the trademark
- Attorney name
- Information on the legal status of a trademarks

Classifications

- Classification (45 NICE classes)
- U.S. trademark classification

Trademark Case Files Dataset organizational structure (source: USPTO)

The database will be updated periodically (annually) and new information from the USPTO is added. The database is developed and maintained by Fraunhofer ISI. The database is located on the servers of Fraunhofer ISI in Karlsruhe, Germany.

3.2 Database content

3.2.1 Definition and description of observations

The observations included in the database are single trademarks, uniquely identified by an application number. In the most recent (January 2019) version, 8,508,501 million filings are included.

3.2.2 Data acquisition and processing

a) Data sources

EUIPO Open Dataset Download

- USPTO Homepage
- Bulk Data Portal <https://bulkdata.uspto.gov>
- Trademark Case File Data for Academia and Researchers
- Currently contains detailed information on 8.5 million trademark applications filed with or registrations issued by the USPTO between 1870 and January 2018

b) Data processing:

- download and extract the file

3.2.5 Quality and accuracy of data

All the data in the USPTO trademark database directly come from the USPTO.

3.3 Technical Specifications

3.3.1 Information on the data base system

The database system used is based on the relational database management system (RDBMS) from Oracle. It allows for an intensive usage and can easily be accessed.

3.3.2 Technical variable definition

Information on all Variables and Datatypes

4 Scientific use cases and main references

In quantitative innovation research, trademarks are more and more extensively used for the measurement of innovation activities (deGrazia et al., 2020). This is particularly true at the micro level, where the relationship between trademarks and innovation has been well established (Flikkema et al., 2014; Greenhalgh and Rogers, 2006; Sandner and Block, 2011). Although trademarks can also be filed for products like technical equipment or technical procedures, services are eligible for protection within the system of trademark rights. Trademarks can thus be used as a complementary and relatively "close to the market" indicator for new products and innovation activities in the service sector (Gauch, 2007; Mendonca et al., 2004; Schmoch, 2014; Sandner and Block, 2011; Schmoch, 2014.). Especially in the case of knowledge-intensive business services trademarks have shown to be well applicable (Schmoch and Gauch, 2009). In the EUIPO and USPTO databases, we focus on trademarks filed for the European as well as the U.S. market.
