LiLa Knowledge Base Approach: Linked Data paradigm

ERC Consolidator Grant 2018-2023

A collection of multifarious, interoperable linguistic resources described with the same vocabulary for knowledge description (by using common data categories and ontologies)

Interlinking as a Form of Interaction

Infrastructure

Interoperability

The Linked Data Principles

Use URIs for things (e.g. an entry in a lexicon, a token in a corpus)

- Use URIs for things (e.g. an entry in a lexicon, a token in a corpus)
- Use HTTP URIs to allow people (and machines) to look up things

- Use URIs for things (e.g. an entry in a lexicon, a token in a corpus)
- Use HTTP URIs to allow people (and machines) to look up things
- Use web standards to represent/query (meta)data, such as RDF and SPARQL

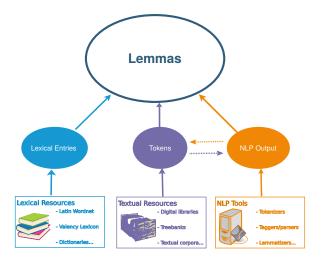

- Use URIs for things (e.g. an entry in a lexicon, a token in a corpus)
- Use HTTP URIs to allow people (and machines) to look up things
- Use web standards to represent/query (meta)data, such as RDF and SPARQL
- Include links to other URIs

LiLa Knowledge Base

Lexically-based architecture and (meta)data sources

LiLa reflects the annotation granularity of the resources it connects

No data enrichment or further analysis is performed ...but we can help you to enrich your (meta)data

eiusdem autem est unum contrariorum prosequi et aliud refutare sicut **medicina**, quae sanitatem operatur, aegritudinem excludit. (IT-TB: SCG, lib. 1, cap. 1, n. 6)

Now it belongs to the same thing to pursue one contrary and to remove the other: thus **medicine**, which effects health, removes sickness. (Trans. Laurence Shapcote)
