M.M. Gryshko National Botanical Garden is located in the northern part of Ukraine in Kyiv. The entire area is 130 hectares and altitudes vary from 100 to 190 m above sea level. The Botanical Garden lies on the right bank of the river Dnipro. High hills are cut with many valleys and provide suitable conditions for many introduced plants. The climate of Kyiv is temperate continental. Average yearly temperature is +7.4° C. Mean temperatures in Kyiv are +20.5° C for the hottest month (July) and -3.5° C for the coldest month (January). The highest recorded temperature was +39.9° C and the lowest was -32.2° C. The yearly precipitation is about 550-650 mm and average total solar radiation – 97-100 kcal/cm<sup>2</sup> per year. The collections of plants from all the continents consist of more than 16 000 taxa.
