

Figure S12. DIAPH2 immunolocalization studies in basal conditions. DIAPH2 localization was studied in HEK293 cells 48 hours after transfection with plasmids coding for HA-tagged isoforms of wild-type or mutant DIAPH2 proteins (DIAPH2-HA-WT, DIAPH2-HA-MUT). Images were acquired with Leica True Confocal Scanner (TCS) SP8. Single confocal sections are shown. DAPI: 4',6-diamidino-2-phenylindole. Scale bar: 10 μ m.
