In what ways do you feel the EOSC COULD benefit you?

Ease researchers to do their research and find all their relevant data, software, tools, services and resources!

as data repository

Providing me the services to better do my work...

as a databank for materials for scientific language reasearch (sorry, I am a linguist, teaching English for scientific communication)

discoverability of our research; outreach to other audiences; community approach; sharing access to relevant tools

Foster communities of expertise (while preserving a reliable infrastructure)

6

What do you think the EOSC is primarily about?

federation of different services and infrastructures

Storing research data

Federating OS infrastructure

Providing a steady infrastructure of reusable services to European researchers/Research Centres.

sharing data and knowledge

Allow for cross-domain research

Sharing Data re-use collaboration

EOSC is about creating single entry points to a federated infrastructure, hiding the complexities for researchers.

Sharing standards, best practices and technology to create an ecosystem of FAIR data and services

13

What do you think the EOSC is primarily about?

It aims to organize key areas and questions respecting the implementation of Open Science in Europe.

What makes the connection between open science and open innovation possible

3

13

In what ways do you feel the EOSC SHOULD benefit you?

To ease the onboarding of new actors as service providers (in the EOSC Marketplace)

Providing me OS data and tools by default (so I don't have to think about it :-))

provide a multilingual corpora and videos on any sort of "data" exchange.

The EOSC providers should onboard, federate, integrate all their resources, data, services and other artefacts in EOSC and its marketplace(s), so that the researchers can do their work, within and across disciplines

by providing a space to find support when doing research; making it easier to find relevant data that I might not be familiar with
