

## SUPPLEMENTAL ANALYSES

### Fastv analysis

The number of kmer hits to SARS-CoV-2 and the Influenza A H7N9 HA gene identified using fastv for analysis of each SRA in PRJNA605983 are shown in Supp. Figs. 1 and 2 below. Note that for SRR11092062 and SRR11092063 Lanes 02 and 04 are plotted separately.

Supp. Fig. 1. SARS-CoV-2 Wuhan Hu-1 genome kmer hits identified in fastv analysis of SRA datasets in PRJNA605983.

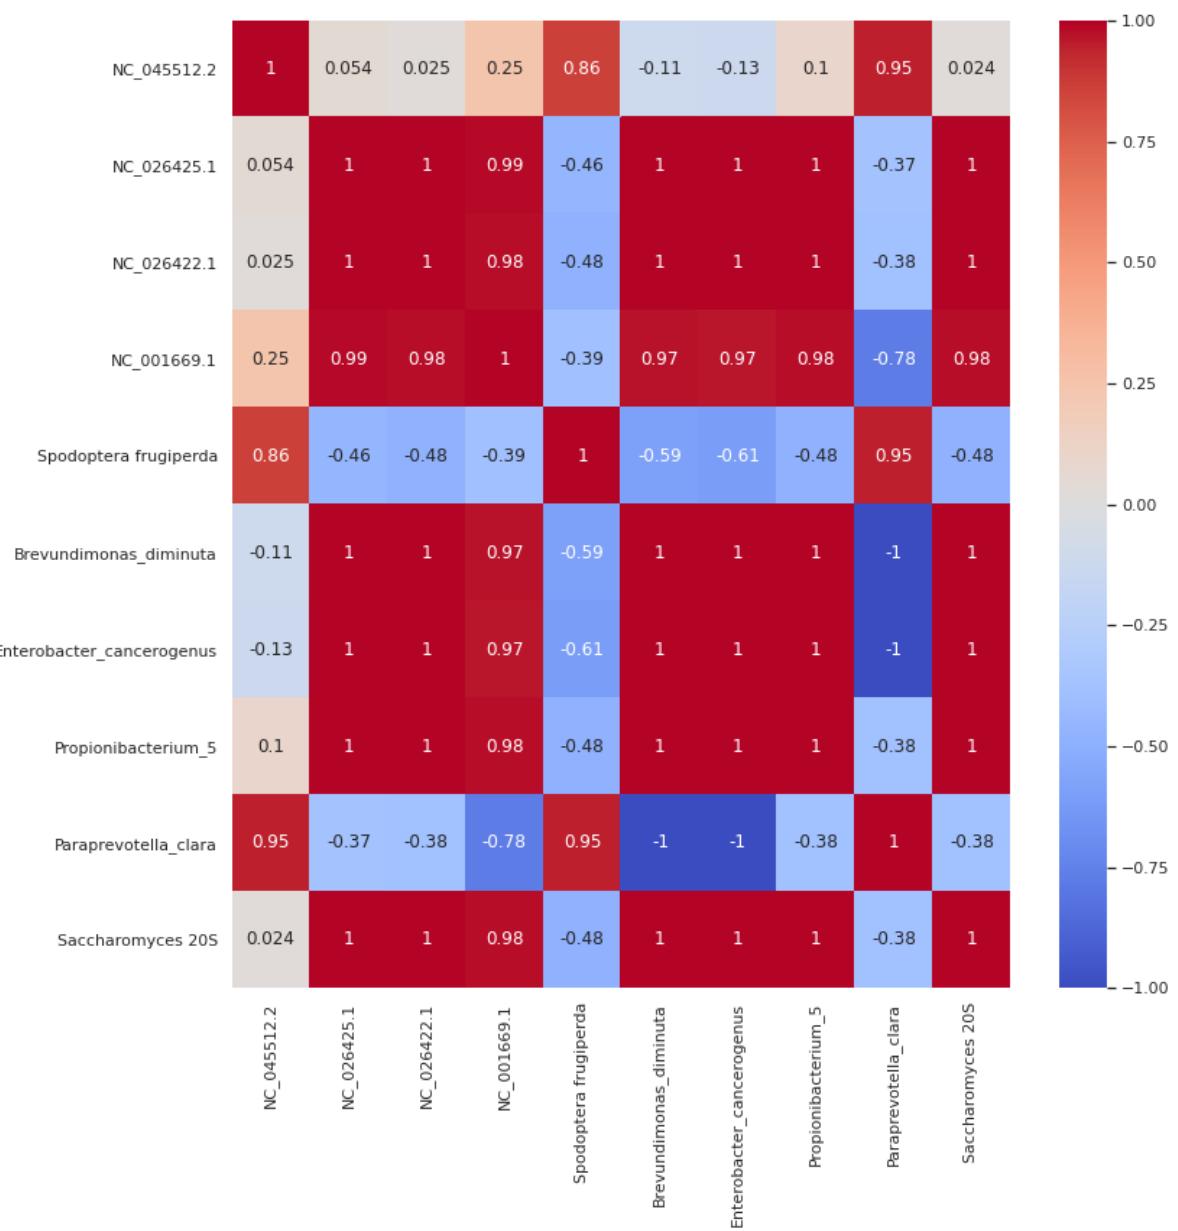

Supp. Fig. 2. Influenza A H7N9 HA gene K-mer hits identified in fastv analysis of SRA datasets in PRJNA605983 (log scale).

Key: as per Supp. Fig. 4.

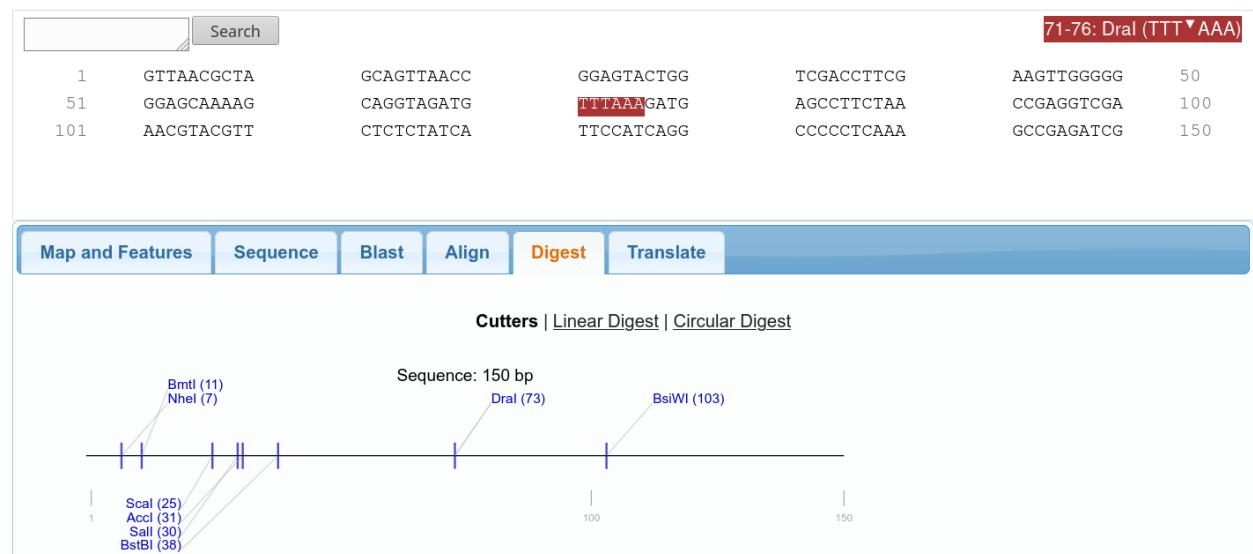

## H7N9 M gene

Raw reads from SRR11092059 were aligned to NC\_026427.1 (H7N9 M gene) using bwa mem with default parameters. As shown in the figure below, several reads extend upstream of the 3' end of the Influenza A H7N9 M gene (NC\_026427.1).

Supp. Fig. 6. 3' most end of SRR11092059 reads aligned to NC\_026427.1, plotted in IGV. The M gene sequence starts at 0bp. Mismatched bases only are plotted with letters.

Read v300043428L4C001R0371251734/2 (top read in figure above) was then plotted in Addgene sequence analyzer (<https://www.addgene.org/analyze-sequence/>). A HinclI restriction enzyme site at the 3' end (GTTAAC) and a DraI restriction enzyme site (TTTAAA) was identified at positions -7 to -2bp relative to the 3' end of the M gene (Supp. Fig. 7). The entire 77nt sequence upstream of the M gene was then analysed using NCBI BLASTN against the nt database and was found to exhibit a high similarityhomology to H5N1 segment 8 with one nt insertion and one substitution (Supp. Figs 8 and 9)

Supp. Fig. 7. Read v300043428L4C001R0371251734/2 plotted in addene. The DraI site at the intersection of the H5N1 sement8 section and H7N9 M gene highlighted in red.

# pVAX1

A complete pVAX1 plasmid sequence was identified from WIV07-2 SRA dataset SRR11092059 as a single contig (Supp. Fig. 10), and was also identified in WIV04-4 (SRR11092062) and WIV02-2 (SRR11092063).

Supp. Fig. 10. pVAX1 plasmid containing Influenza A H7N9 HA gene from de novo assembly of SRR11092059 and plotted in addgene.

The ORF 2 region (274-1956bp) was analyzed using NCBI BLASTN for alignment to the nt database and 100% homology was found to Influenza A virus (A/Shanghai/02/2013(H7N9)) segment 4 hemagglutinin (HA) gene, complete cds KF021597.1 and Influenza A virus (A/chicken/Guangdong/G2/2013(H7N9)) segment 4 hemagglutinin (HA) gene, complete cds KJ395948.1 and synthetic constructs (Supp. Fig. 11).

Supp. Fig. 11. NCBI BLASTN analysis on ORF 2 region of the pVax1 plasmid identified in contigs from de novo assembly of SRR11092059.

Reads from SRR11092059 were then aligned to the pVax1 plasmid (de novo assembled contig k141\_31) to assess coverage and depth. 62,599 reads were found to be mapped to the pVax1 plasmid sequence as shown in Supp Fig. 12.

Supp. Fig. 12. 65299 reads from SRR11092059 were mapped to a pVax1 plasmid sequence identified from de novo assembly of SRR11092059 (contig k141\_31), plotted in IGV.

## Addendum

De novo assembled pVax1 vector sequence has been saved as pvax1\_4765.fa in Supplementary Data

>pVax1 SRR11092059 k141\_31
