

Small-Scale Initiative in Machine Learning

Advancing research through Machine-Learning: an applied workshop and consulting program

Are **you** a researcher in the Netherlands and do you have a challenging research question that would benefit from machine learning or deep learning? Do you already have scientific data from which you want to gain insights and would now like to collaborate with experts in machine learning? If so, this workshop and consultancy program is for you.

Tell us about your idea and your team (3-5 people). From the submitted proposals we will invite up to 13 teams to first spend a week on machine learning training, given by our machine learning experts.

Following the workshop, you will brainstorm with the eScience Center's research engineers about how to best address your research problems using machine learning technologies. The **eScience Center** will offer you advice and support during the agreed duration of the project to achieve the desired results. Together we will share knowledge, develop and explore new ideas, and boost your understanding of current machine learning techniques.

Time and duration

Workshop: 17 May - 21 May 2021

Consultancy period: May - December 2021

Submission deadline: 1 March, 2021, 12:00:00 (CET)
