

Figure S2. Autophagy inhibitor bafilomycin A1 blocks proliferation of MEC-1 cells. MEC-1 cells (3×10^5 cells/mL) were labeled with CFSE and treated with vehicle control (0.1% DMSO; CTRL DMSO) or 10 nM and 100 nM bafilomycin A1 or for 72 h. Retention of CFSE was determined using flow cytometry. Data are means \pm SEM of 2 independent experiments.
