

# The Open Science Office of the University of Mannheim

## Supporting Researchers Beyond Open Access and Research Data Management

established  
February 2021

support, connect  
& promote

individual  
& institutional level

How can I make my research more open?

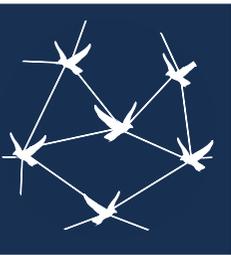

How and where to do preregistration?

Is my research well documented to be reproducible?

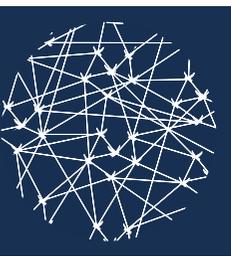

### Supporting and Training Researchers

The Open Science Office supports researchers at all career stages and from all disciplines. We offer *Open Science Checks* to examine each researchers' potential and support the implementation of Open Science techniques into their research. Via *training* in various formats as well as our upcoming *website*, information on Open Science can be obtained. *Funding* is provided for Open Science research projects (*Open Science Grants*) and can be applied for conference visits or research stays that focus on Open Science.

### Interconnecting Open Science Services at the University of Mannheim

Within the University of Mannheim, support in the Open Science core fields is provided for instance by the *Open Access Representative*, the *Research Data Center*, the *Research Support Unit* and other players. The Open Science Office interconnects these points of contact to support researchers. Furthermore, these various points of contact are bundled and integrated to achieve an institutionalized approach that includes an Open Science perspective on *research*, *teaching* and *citizen science*.

### Promoting an Institutionalized Perspective on Open Science

The Open Science Office is supported through the *organizational integration* and the *administrative substructure* of the University of Mannheim, which build a framework in which we operate. Through our national and international connections, we promote an institutionalized approach on Open Science.

Why does  
your institution  
not have an  
Open Science  
Office?
