

**Figure S1.** Western blot analysis of effectors in cell-associated and supernatant proteins of ORS3257 WT and  $\Delta$ T3SS strains. (a) Western blots were performed with an anti-His<sub>6</sub> antibody. The gene accession number corresponding to the tagged protein for each strain is indicated on the right and the size of the band on the left. (b) Western blot with anti-GFP antibody of cells and supernatant (sup) proteins of ORS3257 WT and strains producing His<sub>6</sub> tagged proteins. The gene number corresponding to the tagged protein for each strain is indicated.
