- ▶ Validation results
- ▶ Future Plan

# Summary

---

- ▶ Himawari-8 has been operational since 7 July 2015.
- ▶ We developed an SST algorithm for Himawari-8. Skin SST is calculated from two or more than two IR data.
- ▶ Bayesian method was introduced to detect cloud.
- ▶ We experimentally retrieved SSTs from Himawari-8 data and compared them with BUOY data. Validation result shows bias between -0.3 and 0.1 K and STD between 0.4 and 0.7 K.
- ▶ Himawari-8 SST will be available at JAXA's FTP server, and it will be monitored and validated at SQUAM by NOAA/NESDIS.
- ▶ GCOM-C SST will be retrieved using the same algorithm with the Himawari-8 algorithm for synergy.

# Himawari-8

---

- ▶ Himawari-8, JMA's new geostationally meteorological satellite, was launched via H-IIA by JAXA on 7 October 2014 and it replaced MTSAT-2 on 7 July 2015.
- ▶ Himawari-8 stays at ~36,000 km above 140E and observes east to south-east Asia, western Pacific and around Australia every 10 minutes.
- ▶ Advanced Himawari Imager (AHI) is a visible-infrared radiometer on board Himawari-8. Function of observation has been improved with AHI.

# Enhancement of the observation function of Himawari-8/9 as compared to that of MTSAT-IR/2

## Higher spatial resolutions

## More frequent observations

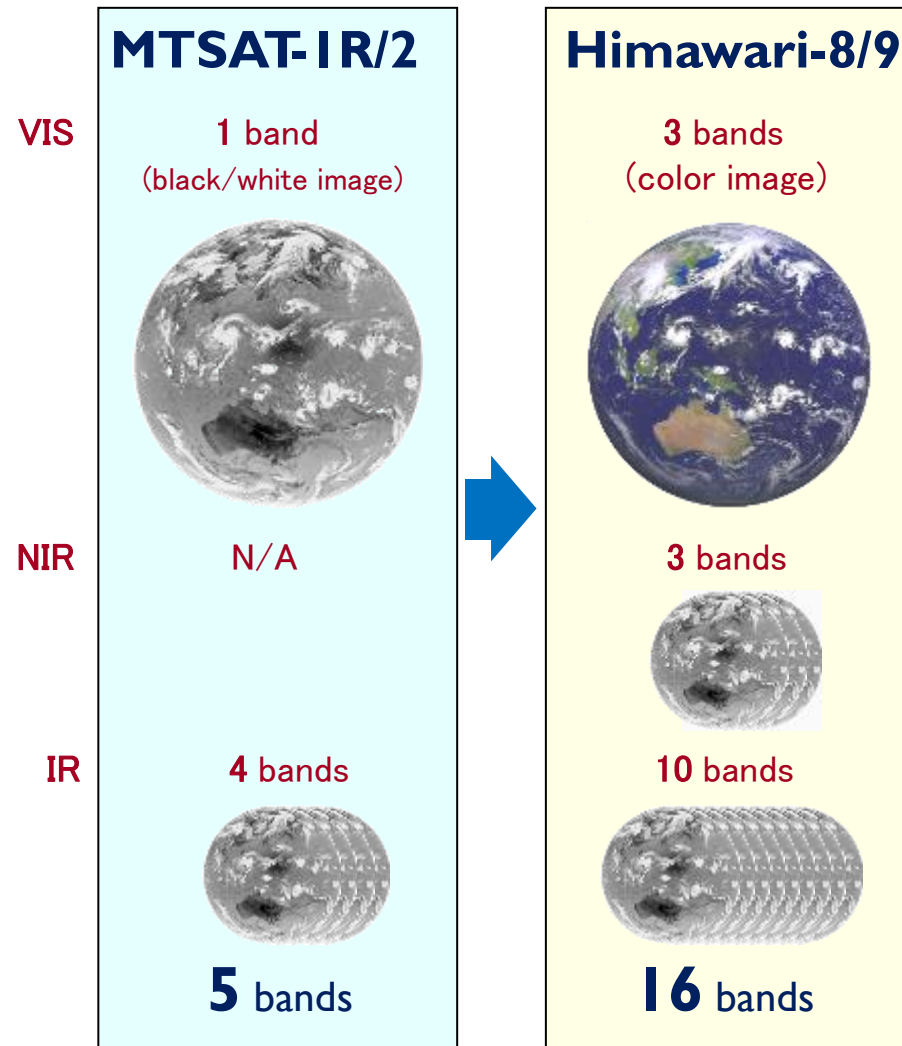

Full disk observation with 10-minute intervals

Small-sector observation

## More spectral bands

# Specification of “Himawari-8/9” Imager (AHI)

\*Himawari-9 will be launched in 2016

## HIMAWARI-8/9

	Band	Central Wavelength [μm]	Spatial Resolution	
VIS	1	0.43 - 0.48	1Km	RGB Composited Full Color Image
	2	0.50 - 0.52	1Km	
	3	0.63 - 0.66	0.5Km	
NIR	4	0.85 - 0.87	1Km	Aerosol
	5	1.60 - 1.62	2Km	
	6	2.25 - 2.27	2Km	
	7	3.74 - 3.96	2Km	
IR	8	6.06 - 6.43	2Km	Water Vapour
	9	6.89 - 7.01	2Km	
	10	7.26 - 7.43	2Km	
	11	8.44 - 8.76	2Km	SO <sub>2</sub>
	12	9.54 - 9.72	2Km	
	13	10.3 - 10.6	2Km	O <sub>3</sub>
	14	11.1- 11.3	2Km	
	15	12.2 - 12.5	2Km	
		16	13.2 - 13.4	2Km

# Spectral Response Functions of IR bands

SRFs of Himawari-8/AHI Infrared Bands (September 2013)

# Topics

- ▶ Validation results
- ▶ Future Plan

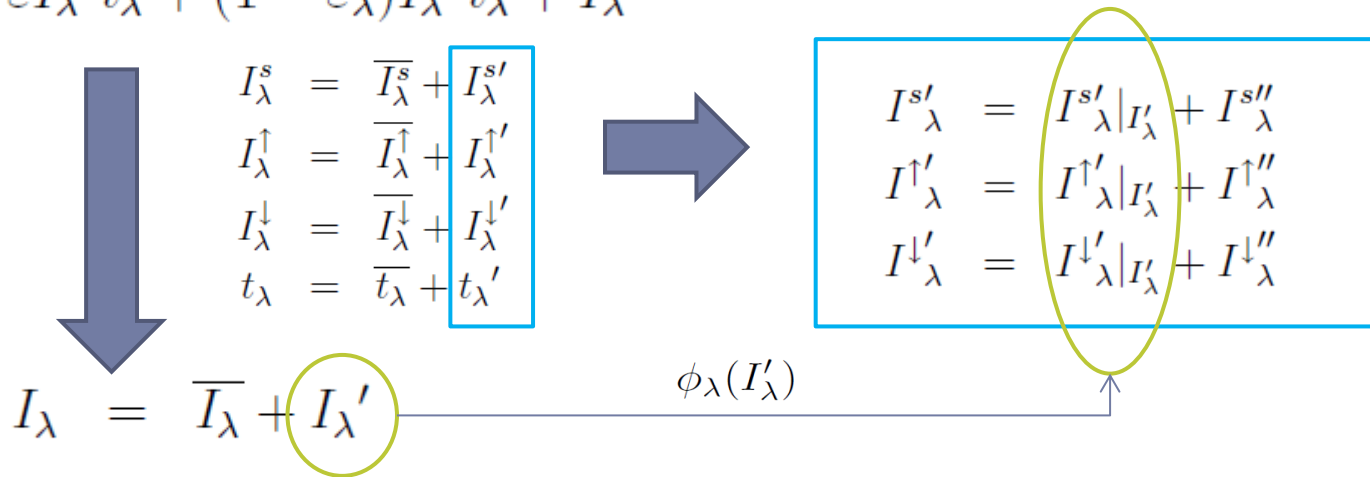

# SST Algorithm

---

- ▶ It calculates Skin SST from a combination of two or more than two IR data.
- ▶ We currently uses 10.4 and 11.2 micron bands as the key bands, and 12.4, 8.6 and 3.9 micron bands as optional bands.
- ▶ Coefficients and parameters used in retrieval were calculated from NWP data with RTTOV in advance.

# SST calculation

$$I_\lambda = \varepsilon I_\lambda^s t_\lambda + (1 - \varepsilon_\lambda) I_\lambda^\downarrow t_\lambda + I_\lambda^\uparrow$$

Introduced two empirical functions:

$$\begin{aligned} \phi_\lambda(I_\lambda') &: I_\lambda' \longrightarrow I_\lambda^{s'|I_\lambda'} \\ \psi_{\lambda_0, \lambda}(I_\lambda^{s''}, t'_{\lambda_0}) &: (I_\lambda^{s''}, t'_{\lambda_0}) \xrightarrow{\approx} I_\lambda^{s''} \end{aligned}$$

# SST calculation

$$I_\lambda = \varepsilon I_\lambda^s t_\lambda + (1 - \varepsilon_\lambda) I_\lambda^\downarrow t_\lambda + I_\lambda^\uparrow$$

Introduced two empirical functions:

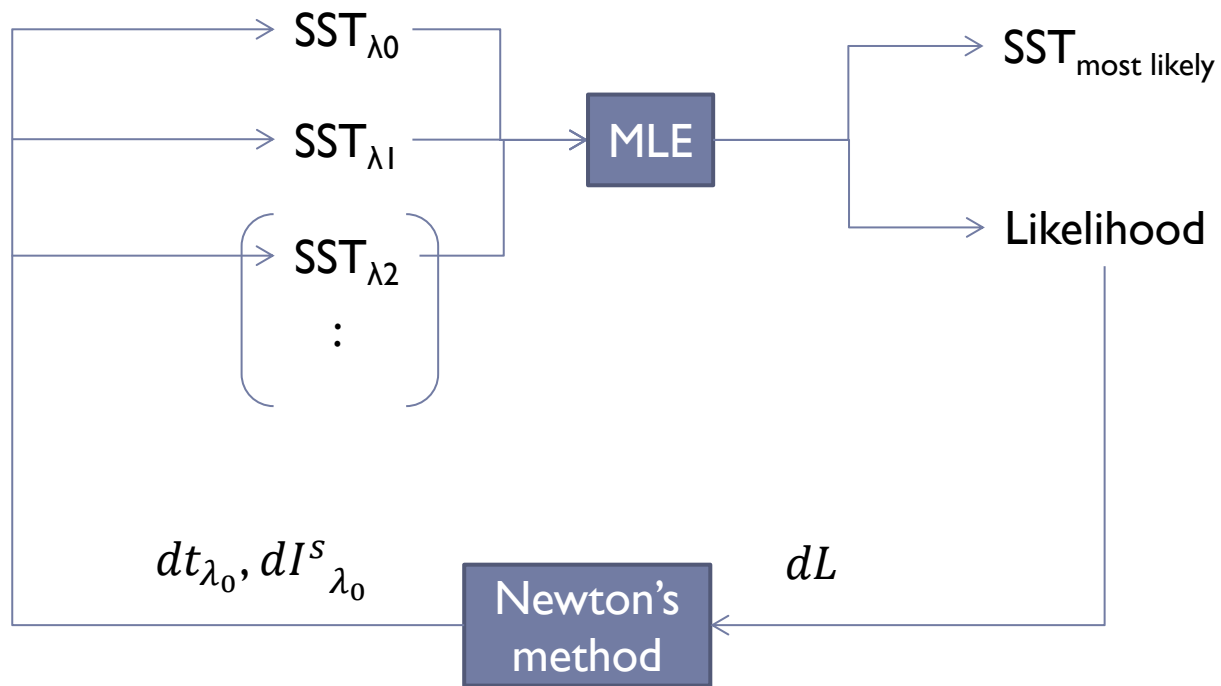

$$\phi_\lambda(I_\lambda') : I_\lambda' \longrightarrow I_\lambda^{s'|I_\lambda'}$$

$$\psi_{\lambda_0, \lambda}(I_{\lambda_0}^{s''}, t'_{\lambda_0}) : (I_{\lambda_0}^{s''}, t'_{\lambda_0}) \xrightarrow{\approx} I_\lambda^{s''}$$

SSTs can be calculated at each IR bands from  $I_{\lambda_0}^{s''}$  and  $t'_{\lambda_0}$ .

$SST_{\lambda_0}, SST_{\lambda_1}, (, SST_{\lambda_2}, ...)$

# Iteration of retrieval

$$\mathbf{x}_{n+1} = \mathbf{x}_n + (\mathbf{S}_x^{-1} + \mathbf{K}^T \mathbf{S}_r^{-1} \mathbf{K})^{-1} \mathbf{K}^T \mathbf{S}_r^{-1} \mathbf{r}(\mathbf{x}_n)$$

$$\mathbf{r}(\mathbf{x}) \equiv (T_{s, \lambda_i} - T_s(\mathbf{x}))$$

$$J(\mathbf{x}) \equiv \mathbf{r}(\mathbf{x})^T \mathbf{S}_r^{-1} \mathbf{r}(\mathbf{x})$$

# Algorithm Validation

---

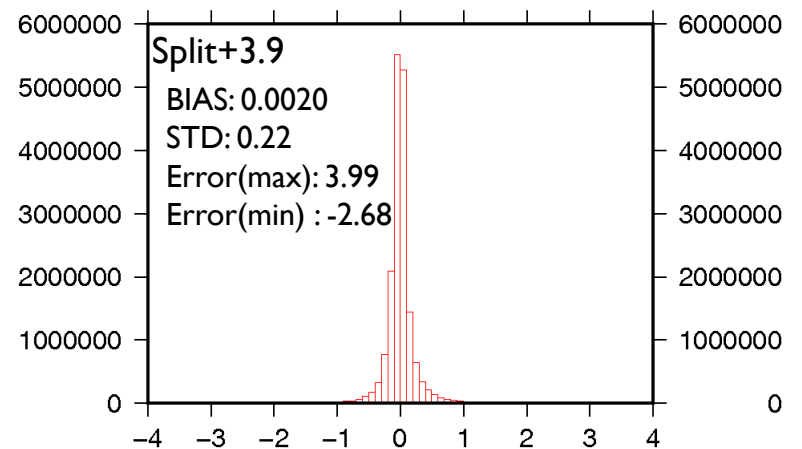

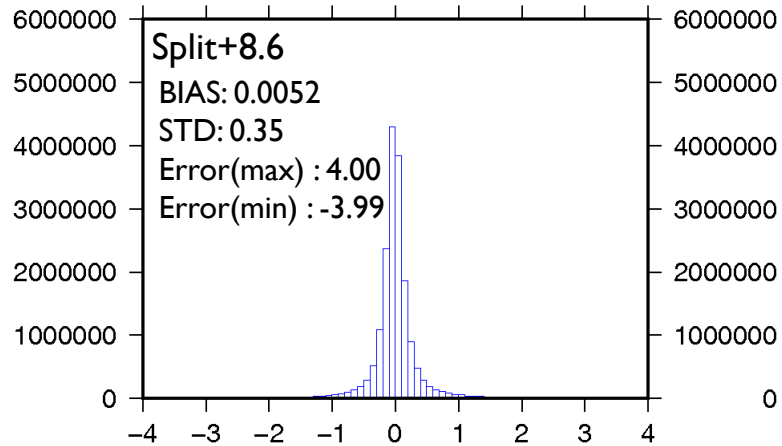

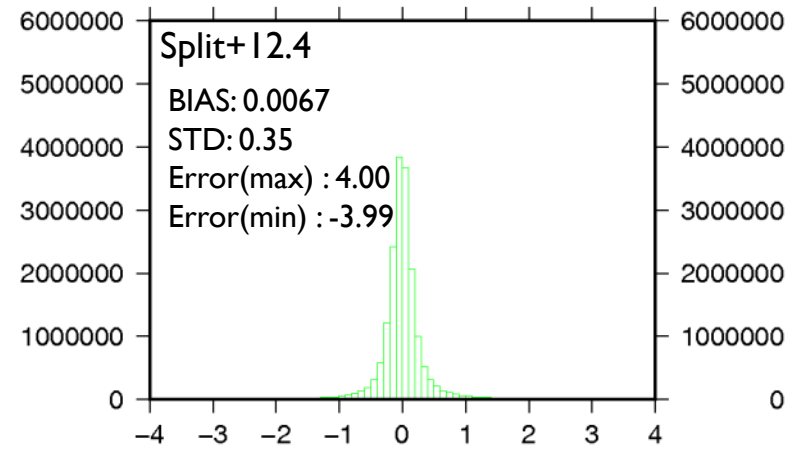

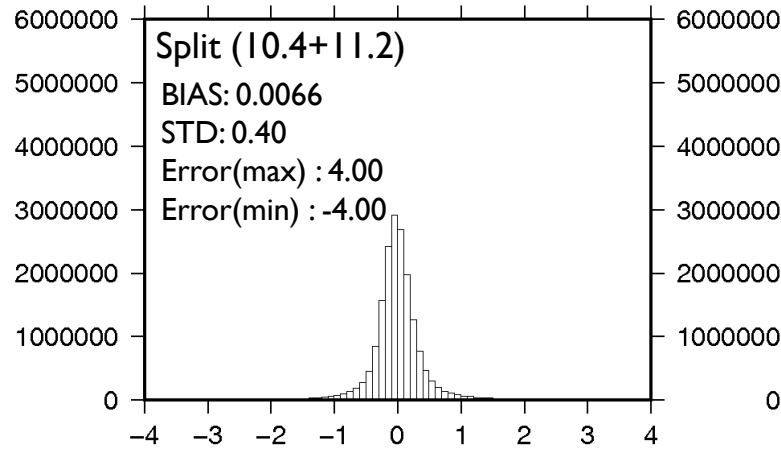

- ▶ **Data**

- ▶ SST analysis
- ▶ NWP data

- ▶ **Validation procedure**

- ▶ 1) Calculate TOA radiances from SST analysis and NWP data with RTTOV 10.2
- ▶ 2) Estimate SSTs from the TOA radiances
- ▶ 3) Compare estimated SSTs with SST analysis

# Algorithm Capability

# Algorithm Capability (2)

# Validation

---

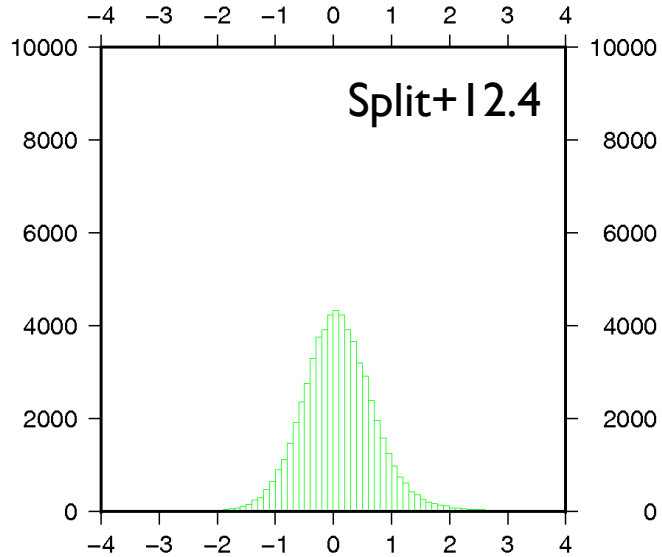

- ▶ **Himawari-8 SST**
  - ▶ SST(split+12.4), SST(split+8.6) and SST(split+3.9)
  - ▶ 3 hourly data in May 2015
  - ▶ Cloud Probability < 0.3
- ▶ **In-situ data**
  - ▶ BUOY (drifter and moored) from iQuam
- ▶ **Match-up conditions**
  - ▶ Within 3km and 3 hours
- ▶ **Validation result includes uncertainties caused by**
  - ▶ different measurement depth (skin / bulk)
  - ▶ different spatial resolution
  - ▶ match-up conditions

# Himawari-8 vs. BUOY

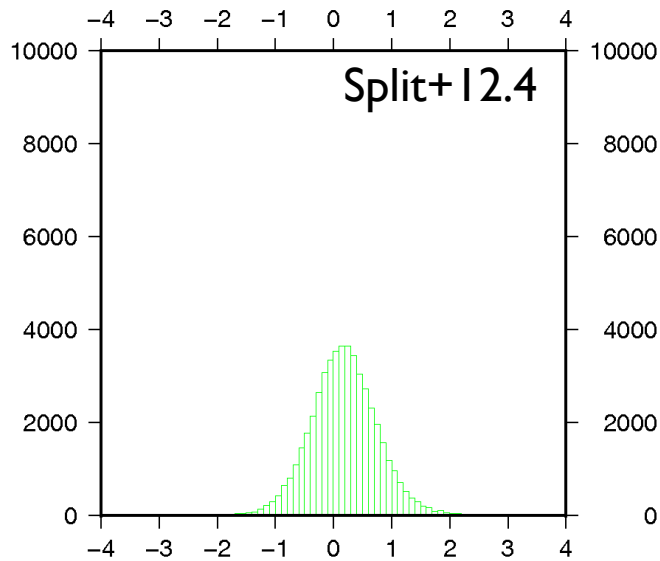

# Statistics (nighttime)

SST	BIAS	STD	N
Split+12.4	0.104	0.69	62182
Split+8.6	-0.17	0.52	62068
Split+3.9	-0.30	0.46	61116

# Statistics (daytime)

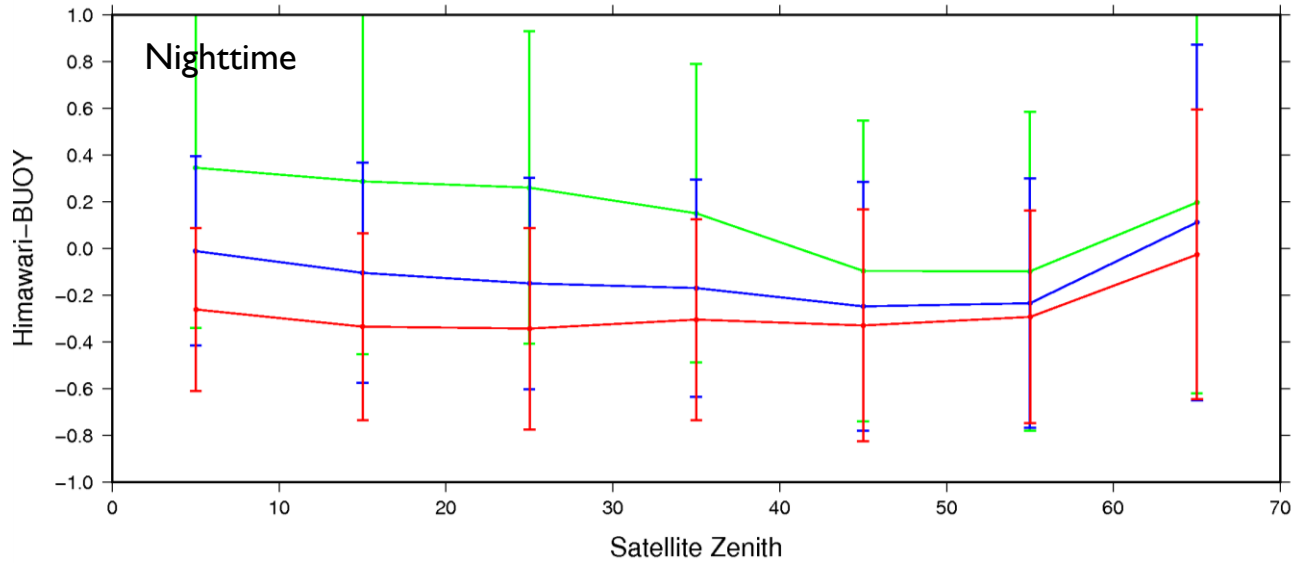

---

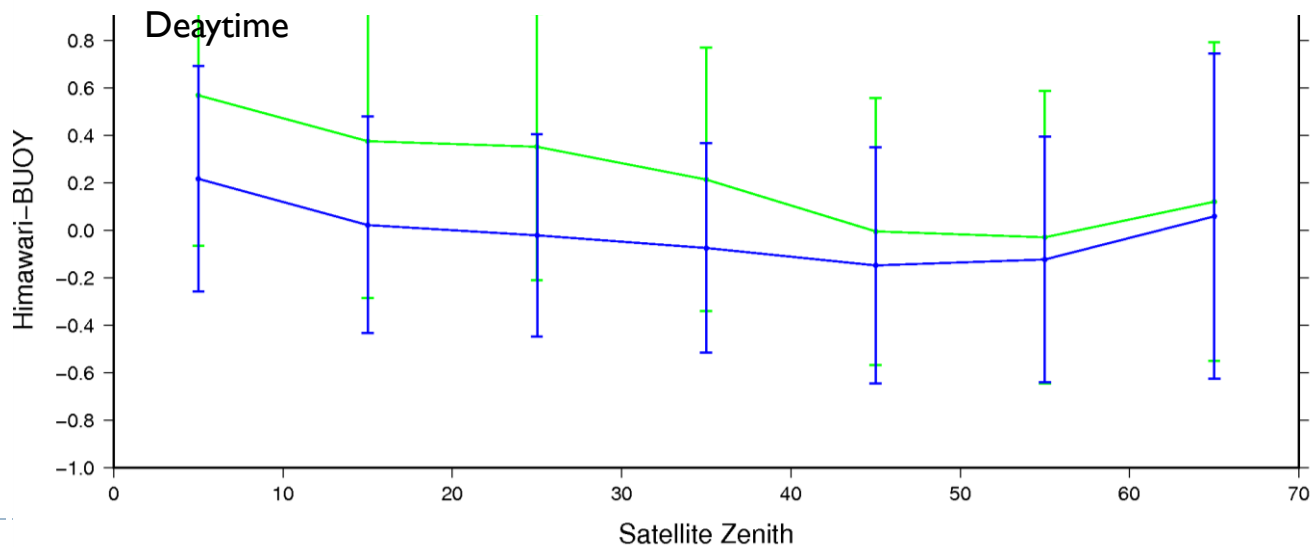

SST	BIAS	STD	N
Split+12.4	0.18	0.60	49268
Split+8.6	-0.068	0.48	49237

# Dependency

Split+12.4  
Split+8.6  
Split+3.9

- ▶ **Future Plan**

# Future Plan

---

- ▶ **H8 L2 SST by JAXA**

- ▶ H8 L2 SST Product by JAXA will soon be available at JAXA's FTP server.

- ▶ **Monitoring and validation by SQUAM/NOAA**

- ▶ H8 L2 SST will be monitored and validated at SQUAM by NOAA/NESDIS.

- ▶ **Synergy with GCOM-C/SGLI (2016 JFY)**

- ▶ GCOM-C SST will be retrieved using the same algorithm with Himawari-8 .

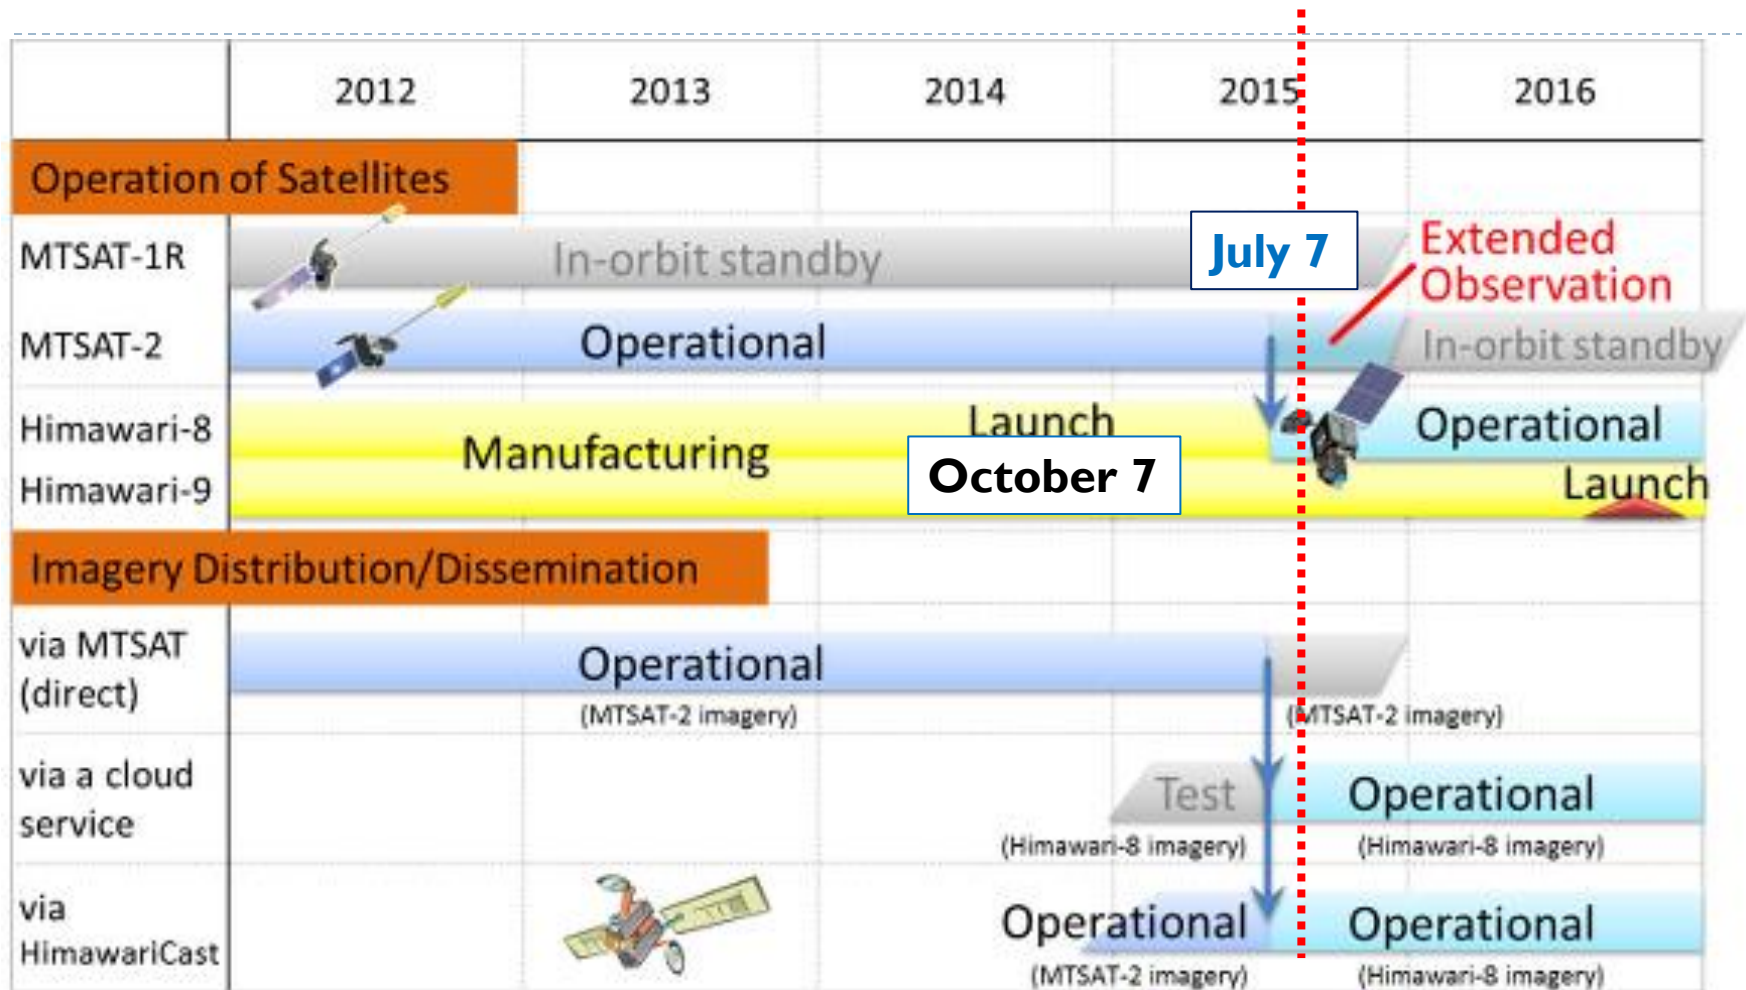

---

Thank you
