# Completeness for Different Stars

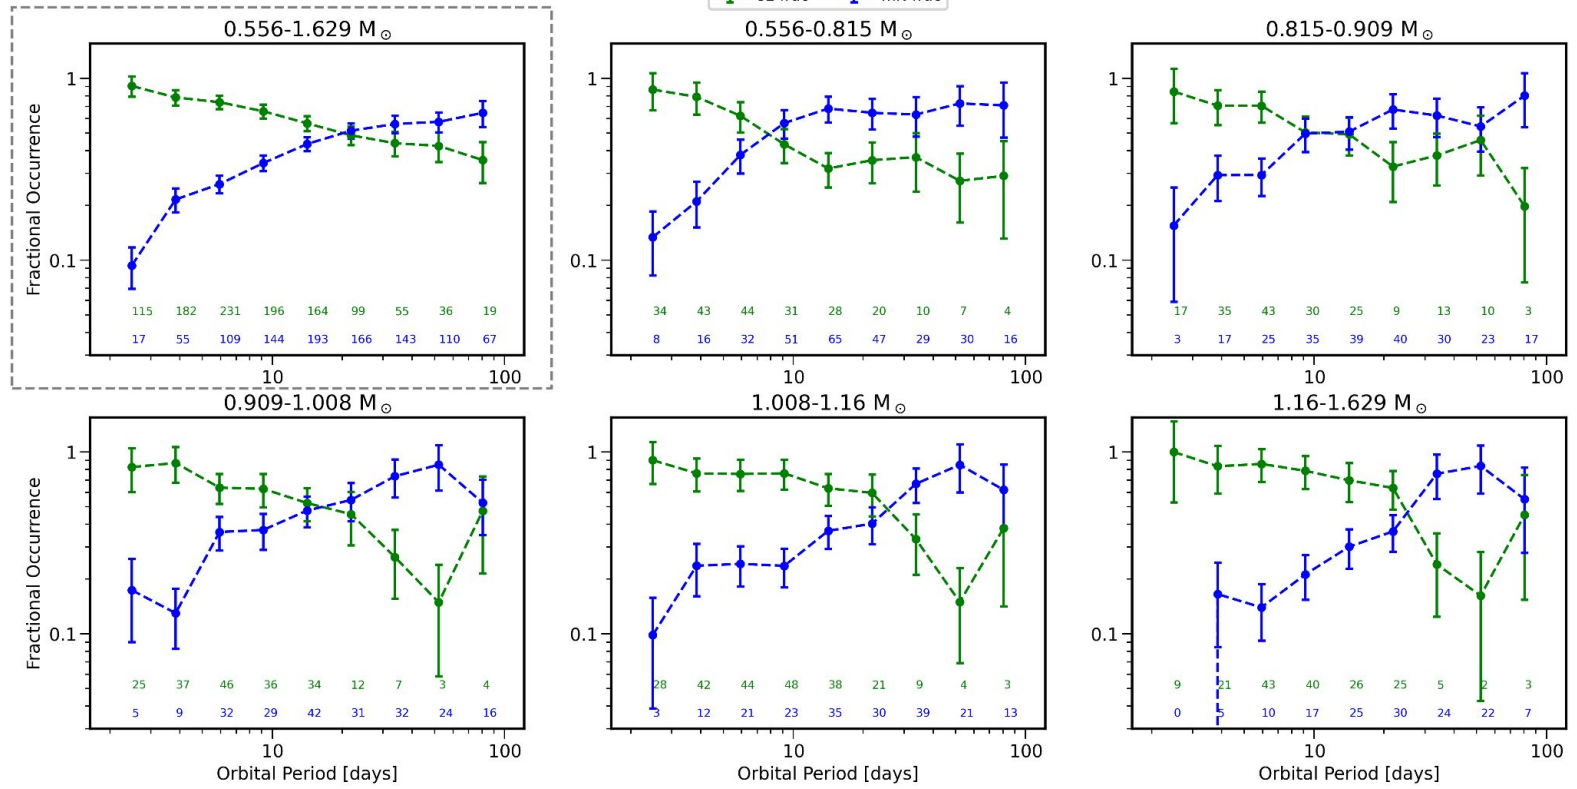

# epos with Stellar Mass

- Completeness maps made separately for each stellar mass bin (small but important!).
- Automated process, update coming soon.

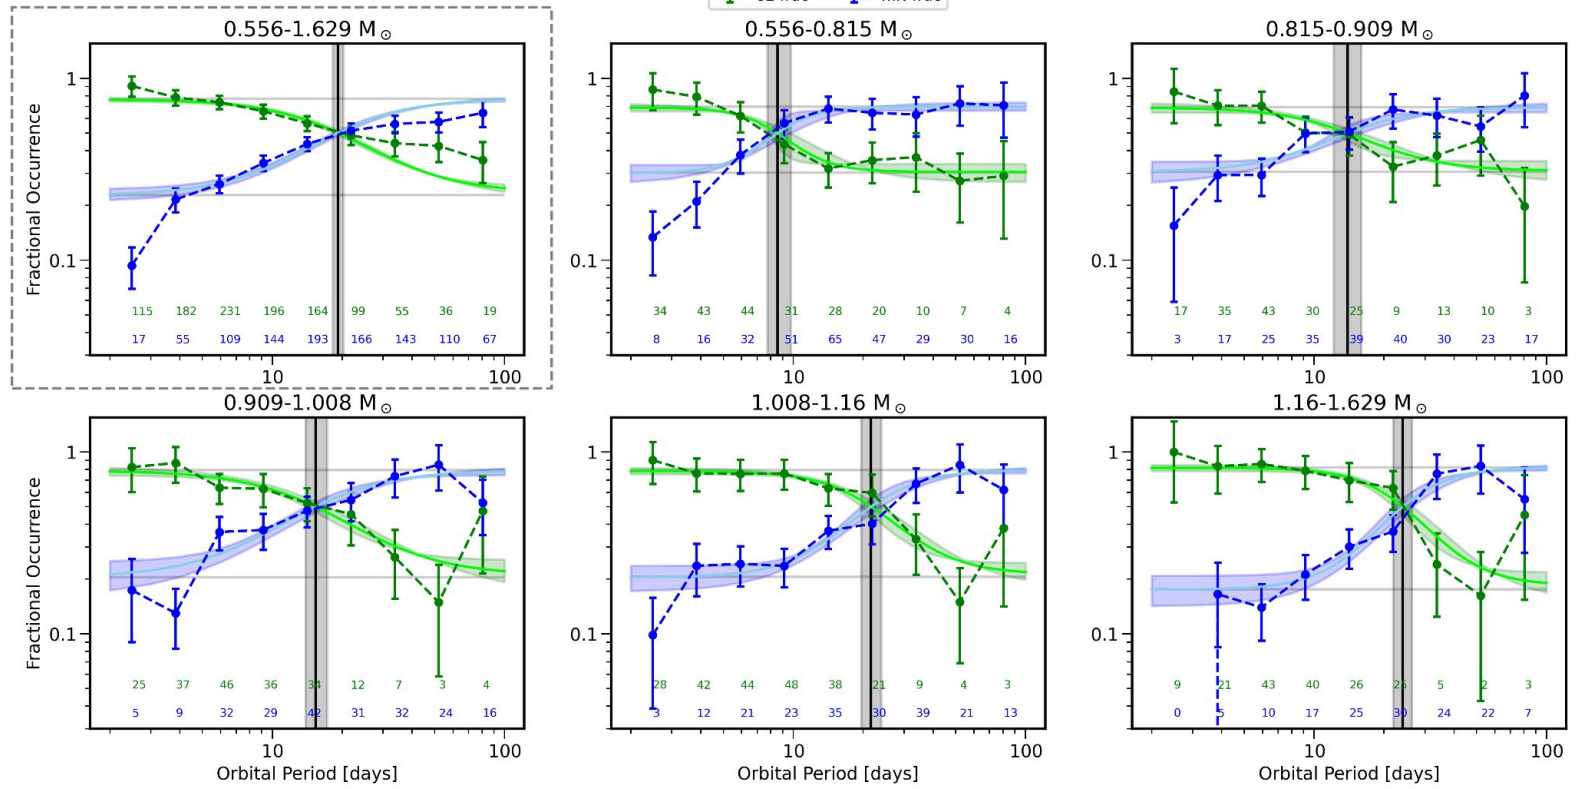

### Fractional Occurrence of super-Earths and mini-Neptunes

# Stellar Mass Dependence!

## Transition Periods

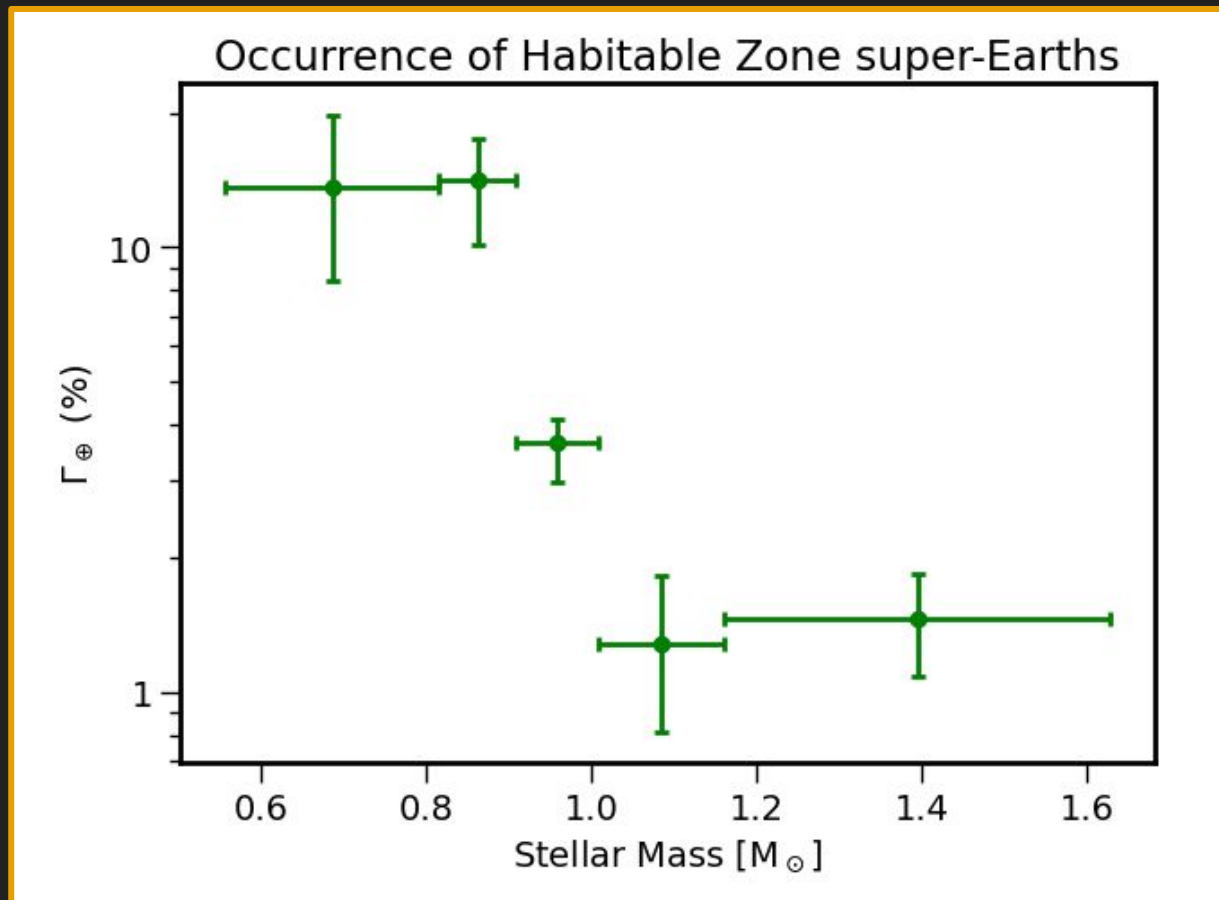

Useful for constraining the relevant regime of atmospheric loss.

Bergsten et al. (in prep)

## Mass Dependence

Useful comparison for the predictions of different atmospheric loss models. Also a check for end products of evolutionary simulations.

# Comparison Plot w/ Stellar Mass Bins
