de.NBI DMP Workshop: 16 Debate Statements

Persistent Identifiers cost time to acquire and are useless afterwards.

I will publish my data so that my article will be cited more.

Research is largely financed by the public, thus the generated data are public property.

The reuse of data does not save costs because research data management also induces costs.

Of course I will always collect my own data: I will not adjust my question to existing data sets.

Reusing data requires more knowledge than the collection of new data.

If I publish my data, my research will become fully transparent and even tiny mistakes will be visible.

Publishing research data does not help to build reputation.

If I publish my research data, someone could be quicker than me and publish results based on my work.

Research data are a valuable resource and need to be conserved for the future.

Managing and publishing research data causes costs that I cannot handle.

Published data do not yield further use.

My research data are mine!

I do not need to plan my project, it already takes enough time to execute it.

I know exactly what I did, I will not waste my time writing it down.

By reusing my data, exiting new collaborations may be forged.
