**ESTEC, Netherlands**

# GDS2.0

---

- Moved to GDS2.0
  - NRT data
    - L2P: AMSR2
    - L3U: WindSAT, AMSR2
    - L4: MWIR and MW OI SSTs
  - Reprocessed data
    - L2P: TMI, AMSRE, AMSR2
    - L3U: TMI, AMSRE, AMSR2, WindSAT
    - L4: MWIR and MW OI SSTs

# Issues

---

- Easy to provide other geophysical parameters in GHRSSST files, but flags are all for SST
- Would like to provide gridded geophysical data in netcdf4 format, but risk confusion with GHRSSST files
- Data centers not excited about slightly different files.
- WindSAT going going going .....

# GPM GMI

- AMSR2 all -0.04 and 0.55
- AMSRE all -0.05 and 0.48
