

The 15th GHRSST 2014 meeting, ST-VAL Breakout session

2–6 Jun, 2014, Cape Town, South Africa

Monitoring and validation of high-resolution Level 2 SSTs from AVHRR FRAC, MODIS, (A)ATSR and VIIRS in SQUAM

ST VAL breakout
GHRSST XV, 2014
3 Jun 2014, X:XX-X:XX AM

<http://www.star.nesdis.noaa.gov/sod/sst/squam/HR/>

³ GST, Inc, MD, USA

⁴ STG, Inc, VA, USA

(Emails: FirstName.LastName@noaa.gov)

SQUAM objective: A global, web-based, community, quasi NRT, monitor for SST producers & users !

Acknowledgments

Level-2 SST: VIIRS/AVHRR/MODIS

- NESDIS SST Team : ACSPO (GAC: 5 platforms, FRAC: Metop-A & B, VIIRS: NPP, MODIS: Terra/Aqua)
- P. LeBorgne, H. Roquet : O&SI SAF Metop-A FRAC
- D. May, B. McKenzie : NAVO SEATEMP
- S. Jackson : IDPS (NPP)
- C. Merchant, Owen Embury: L2P ARC (ongoing effort as a prep for Sentinel-3 SLSTR)

Level-3 SST: AVHRR/(A)ATSR:

- K. Casey, R. Evans, J. Vazquez, E. Armstrong: PathFinder v5.0
- C. Merchant, Owen Embury: L3 ARC (future work)

Level 4 SSTs:

- R. Grumbine, B. Katz : RTG (Low-Res & Hi-Res)
- R. Reynolds, V. Banzon : OISSTs (AVHRR & AVHRR+AMSRE)
- M. Martin, J. R. Jones : OSTIA foundation, GHRSST Median Product Ensemble, OSTIA Reanalysis
- D. May, B. McKenzie : NAVO K10
- J.-F. Piollé, E. Autret : ODYSSÉA
- E. Maturi, A. Harris, J. Mittaz : POES-GOES blended
- B. Brasnett : Canadian Met. Centre, 0.2° foundation
- Y. Chao : JPL G1SST
- H. Beggs : ABOM GAMSSA
- J Hoyer : DMI OISST
- M. T. Chin, J. Vazquez, E. Armstrong : JPL MUR

GHRSST support: Peter Minnett, Craig Donlon, Alexey Kaplan

Definitions of levels:
 L2: at observed pixels (satellite)
 L3: gridded with gaps (satellite)
 L4: gap-free gridded, time-averaged

Major SST data providers:

CMC

Projects and international group

Outline

- | | |
|---|----------------------------|
| 1. High-resolution (HR) SQUAM | p: 4 |
| 2. Example <u>Monitoring</u> of L2 SST with SQUAM metric
Maps, Histograms, Time series, Dependence | p: 5 |
| 3. Time-series <u>Validation</u> against QC'ed drifters
3.1. Sensitivity to space-time window for monthly stats | p: 6-10 |
| 4. Persistent features in monthly maps | p: 11-12 |
| 5. Drifter error from triple collocation method <i>and</i>
correlation between residuals (<i>satellite SST minus Drifters</i>) | p: 13 |
| 6. Summary and future work | <p>p: 14

2. Monitoring in HR-SQUAM (Example 15 May 2014, Night)

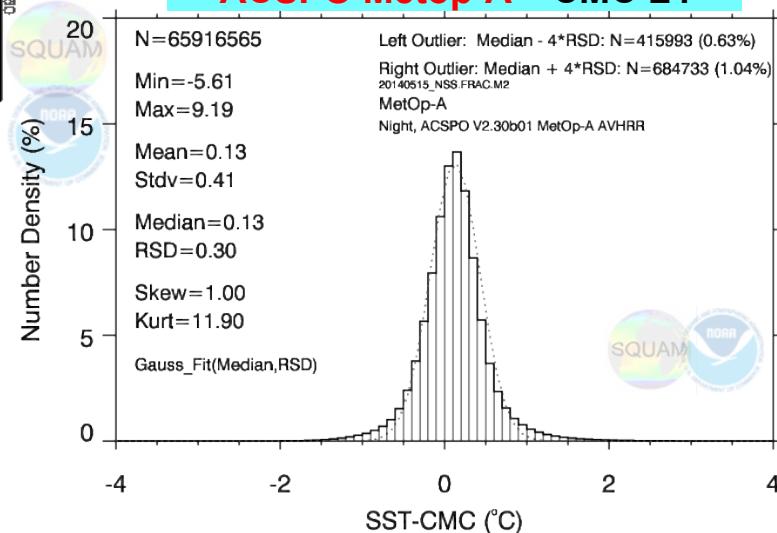

Maps Histograms Time-series Dependencies Hovmöller

ACSPO Metop-A – CMC L4

- Some -ve residuals suggesting possible cloud leakages
- Maps used to check cloud leakage, coverage, and other anomalous situations

ACSPO Metop-A – CMC L4

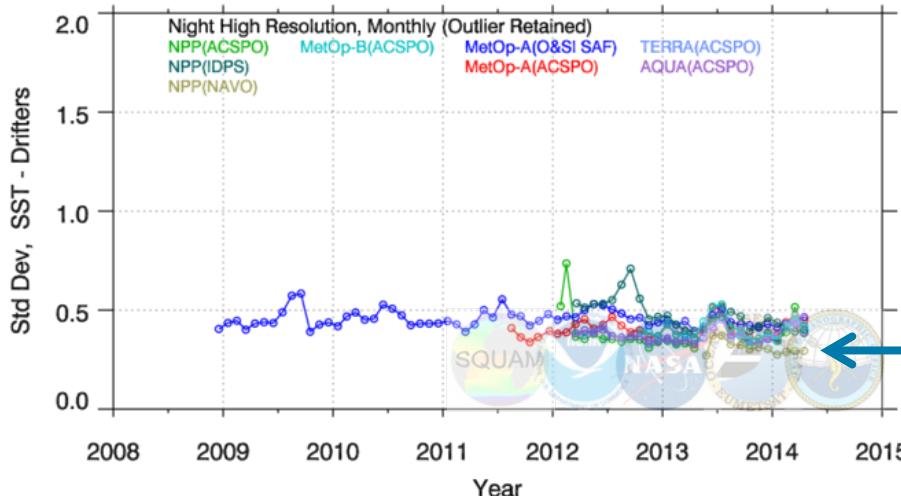

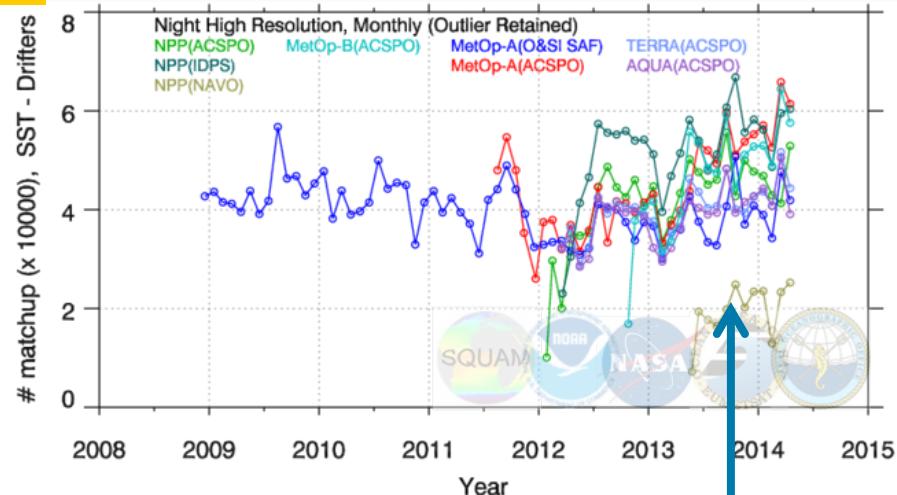

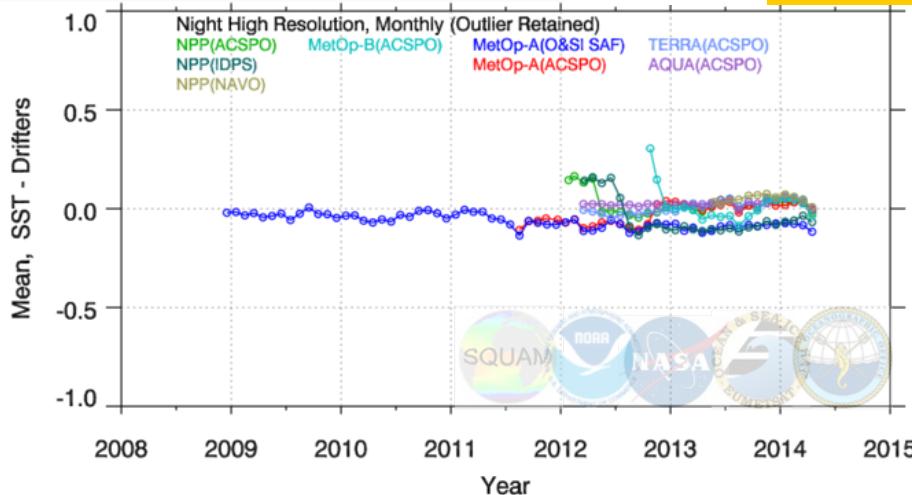

3. Monthly Nighttime VAL vs. iQuam Drifters ($20\text{km} \times 4\text{hr}$)

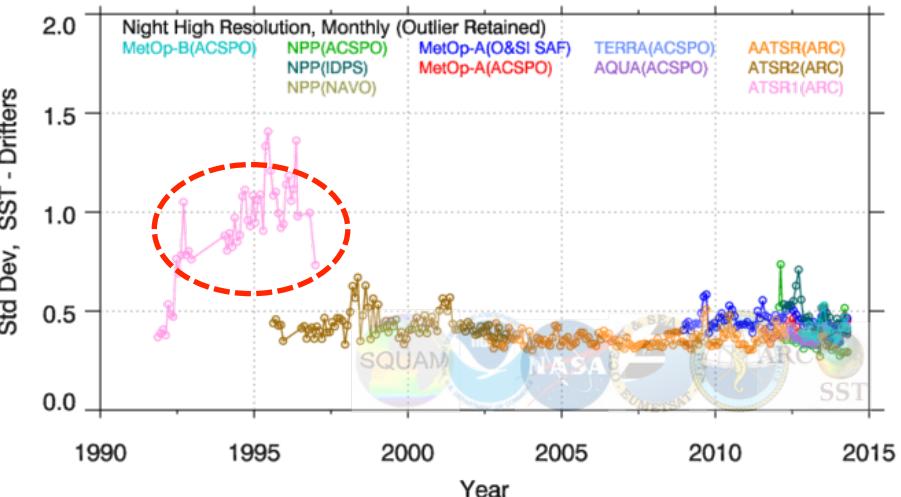

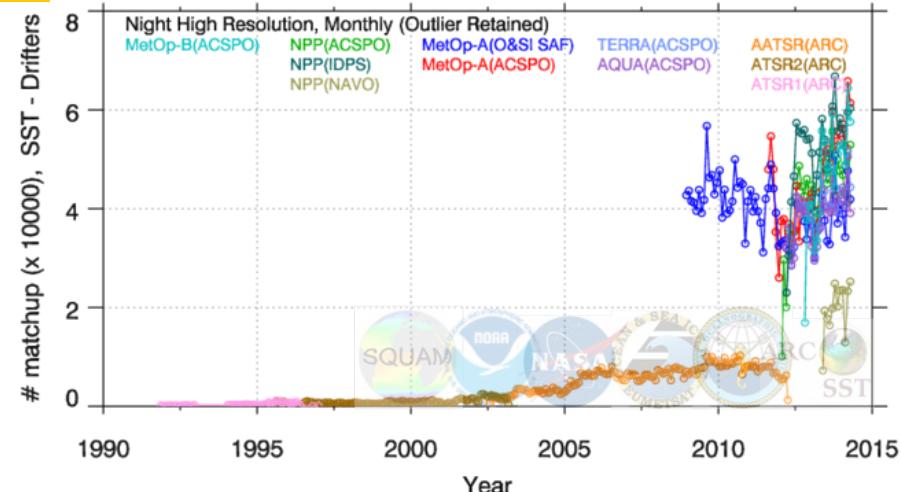

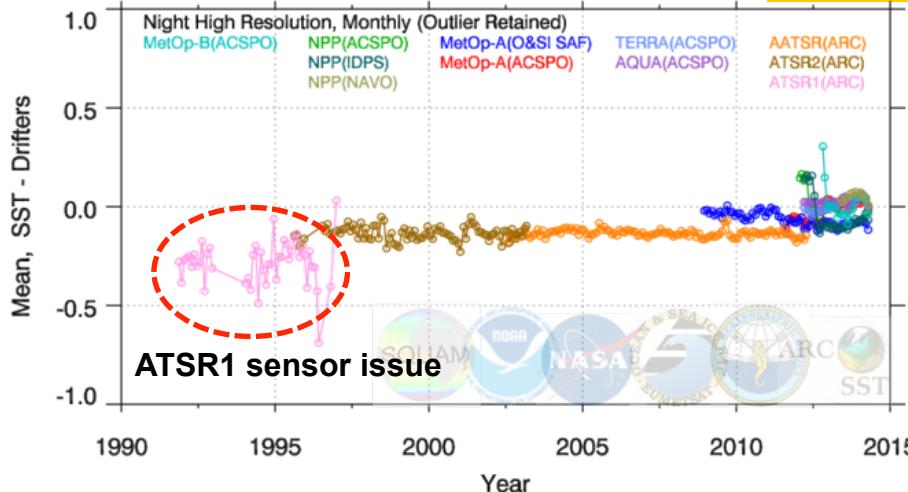

Maps Histograms Time-series Dependencies Hovmöller

NAVO:
Smaller Domain
Improved Std Dev

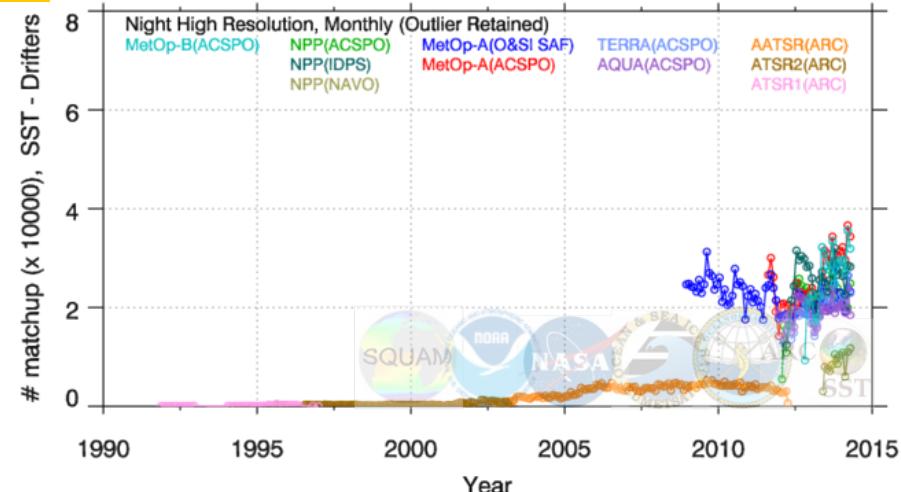

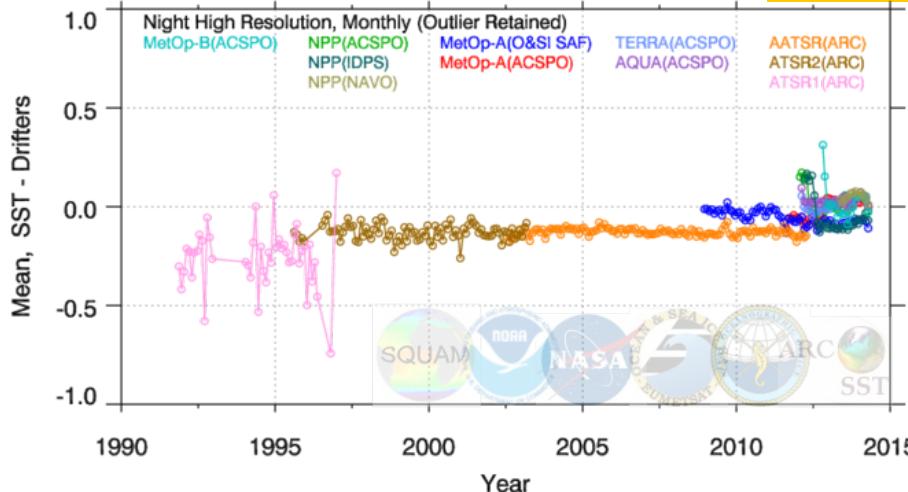

3. Monthly Nighttime VAL vs. iQuam Drifters ($20\text{km} \times 4\text{hr}$)

[Maps](#)[Histograms](#)[Time-series](#)[Dependencies](#)[Hovmöller](#)

Now including ARC (QF GE 3)

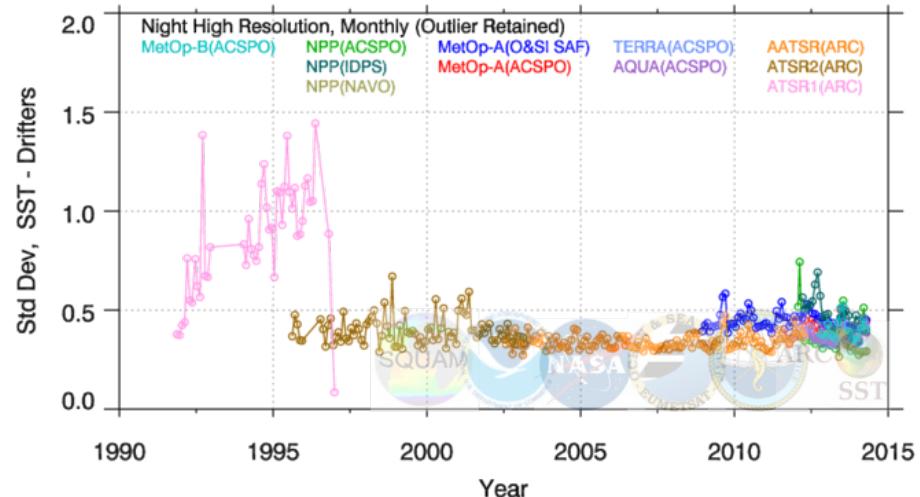

3. Monthly Nighttime VAL vs. iQuam Drifters (10km × 2hr)

[Maps](#)[Histograms](#)[Time-series](#)[Dependencies](#)[Hovmöller](#)

Reduced window size $\times \frac{1}{2}$ space $\times \frac{1}{2}$ time

Sample size reduced by $\times \frac{1}{2}$

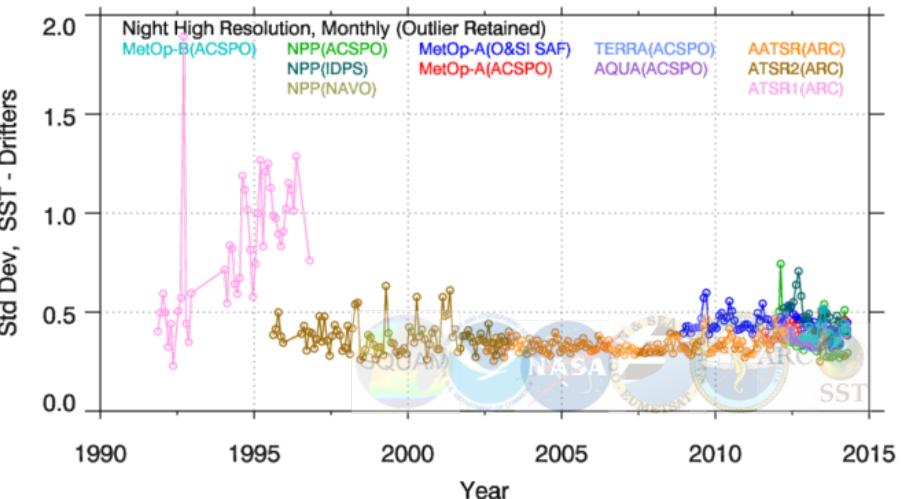

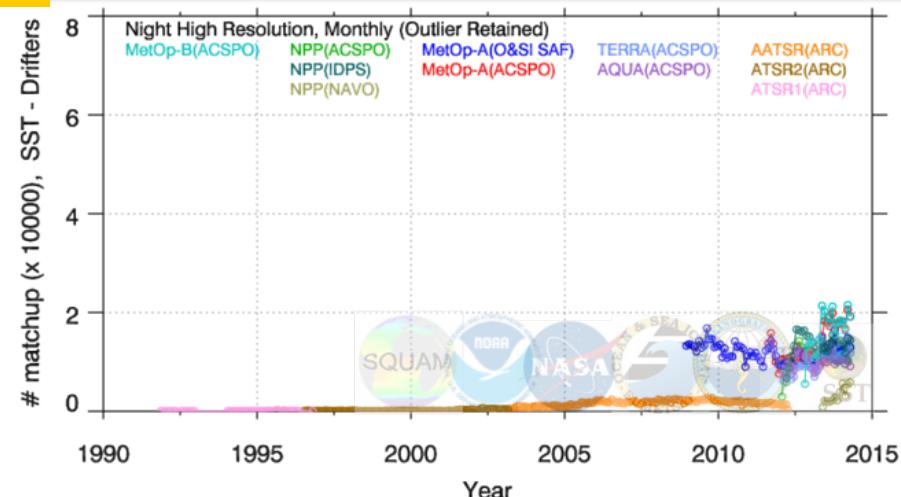

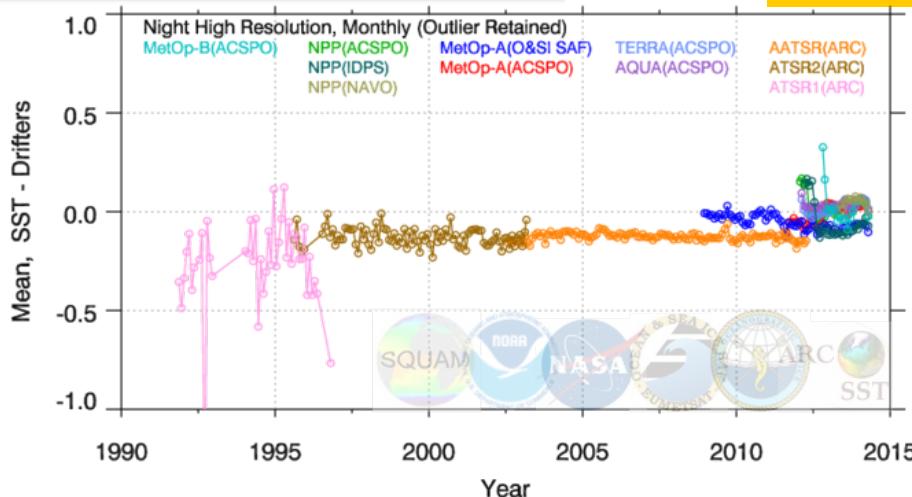

Std Dev reduced but not significantly

3. Monthly Nighttime VAL vs. iQuam Drifters (5km × 1hr)

Maps Histograms Time-series Dependencies Hovmöller

Reduced window size $\times \frac{1}{4}$ space $\times \frac{1}{4}$ time

Sample size reduced by $\times \frac{1}{4}$

Std Dev reduced not significantly

3. Validation (20 km 4 hr, Mar 2014) : Summary**

Products	~ECT	# of matches	Min / Max (°C)	Mean / Median	Std Dev / RSD	Skew / Kurt
ACSPO NPP	13:30	42917 (night) 42586 (day)	-2.61 / 5.92 -2.82 / 4.12	-0.03 / 0.04 0.06 / 0.06	0.39 / 0.25 0.42 / 0.33	2.77 / 35.04 0.35 / 4.46
		12912 10063	-2.58 / 2.20 -1.80 / 4.31	0.06 / 0.09 0.05 / 0.03	0.29 / 0.22 0.38 / 0.32	-0.97 / 7.51 0.58 / 5.89

ARC ATSR2	10:30	1591 1957	-3.11 / 1.63 -4.88 / 2.38	-0.11 / -0.12 -0.18 / -0.16	0.36 / 0.27 0.52 / 0.39	0.04 / 5.39 -0.74 / 6.17

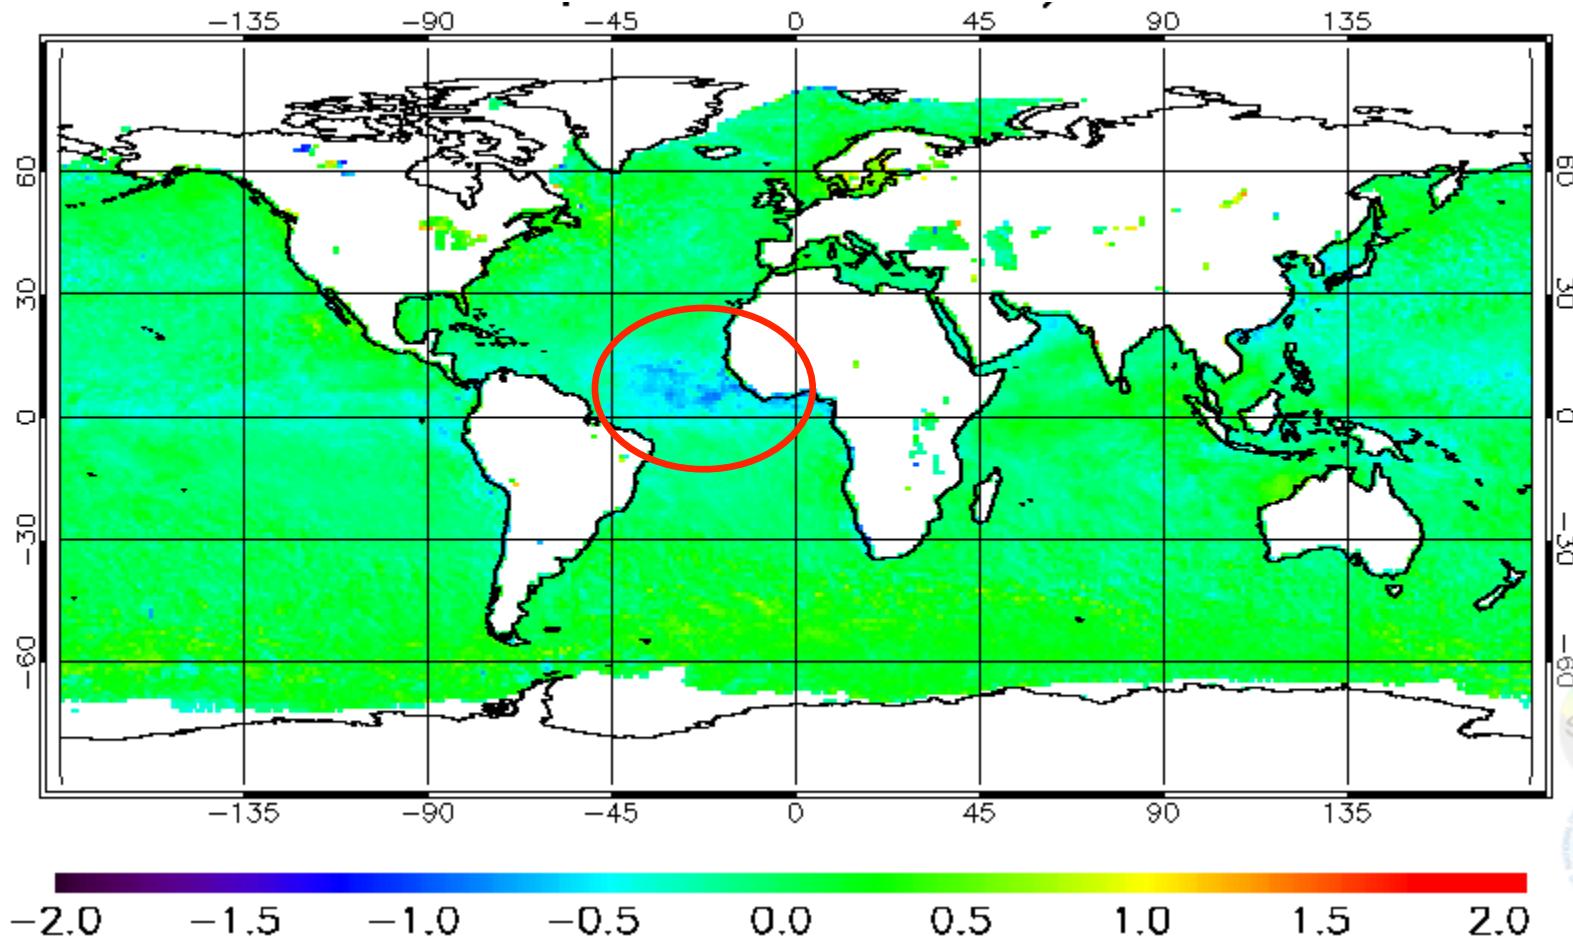

* QC'ed drifters from iQuam: www.star.nesdis.noaa.gov/sod/sst/iquam/; outliers not removed

** All Data for Feb 2014, except: ARC AATSR (Feb 2012), ARC ATSR2 (Feb 2003); ARC ATSR1 not shown (sensor issues)

4. Persistent features (monthly aggregated)

Maps Histograms Time-series Dependencies Hovmöller

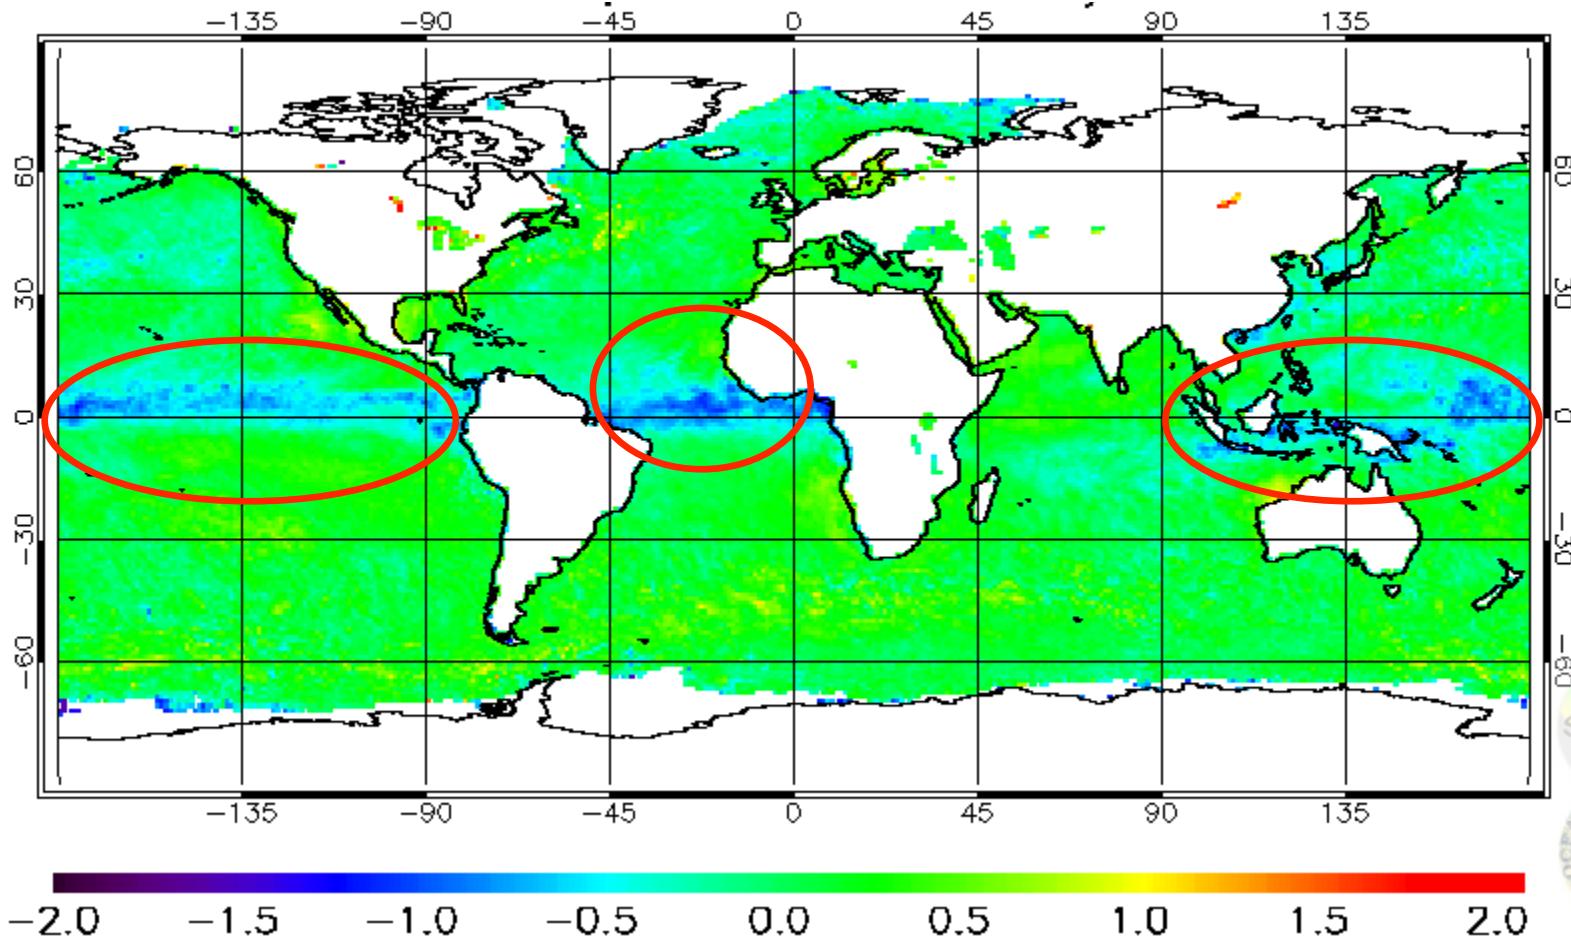

Day: Metop-A (ACSPO) minus CMC L4, Apr-2014

4. Persistent features (monthly aggregated)

Maps Histograms Time-series Dependencies Hovmöller

Day: Metop-A (OSISAF) minus CMC L4, Apr-2014

- More negative residuals possibly suggesting more cloud/aerosol leakages
- Coverage similar to ACSPO (at grid-level; # obs different)

5. Drifter error using Triple Collocation Method (TCM; O'Carroll et al., 2008) and correlation of residuals (Apr 2014)

Combinations for TCM			Avg. Error in Drifters* (1x1 deg; may be an underestimate)																																																																																														
OSISAF Metop-A, ACSPO Terra, Drifters			0.18 (Night) 0.27 (Day)																																																																																														
ACSPO Metop-A, ACSPO Terra, Drifters			0.19 0.26																																																																																														
OSISAF Metop-A, ACSPO Metop-B, Drifters			0.18 0.27																																																																																														
NAVO VIIRS, ACSPO Aqua, Drifters			0.18 0.24																																																																																														
<p>* Drifter errors from different TCM combinations are close but not exactly same – may be due to some correlated errors. The table below shows correlation between residuals.</p> <table border="1"> <thead> <tr> <th>Residuals (SST – Drifters)</th><th>~ECT</th><th>ACSPo NPP</th><th>IDPS NPP</th><th>NAVO NPP</th><th>ACSPo Metop-A</th><th>OSISAF Metop-A</th><th>ACSPo Metop-B</th><th>ACSPo Terra</th><th>ACSPo Aqua</th></tr> </thead> <tbody> <tr> <td>ACSPo NPP</td><td rowspan="3">13:30</td><td>1.00 (Night) 1.00 (Day)</td><td>0.69 0.67</td><td>0.49 0.41</td><td>0.24 0.21</td><td>0.13 0.15</td><td>0.22 0.20</td><td>0.27 0.21</td><td>0.36 0.38</td></tr> <tr> <td>IDPS NPP</td><td></td><td>1.00 1.00</td><td>0.54 0.37</td><td>0.21 0.20</td><td>0.17 0.19</td><td>0.28 0.19</td><td>0.25 0.19</td><td>0.31 0.32</td></tr> <tr> <td>NAVO NPP</td><td></td><td></td><td>1.00 1.00</td><td>0.22 0.18</td><td>0.18 0.10</td><td>0.21 0.15</td><td>0.24 0.15</td><td>0.29 0.23</td></tr> <tr> <td>ACSPo Metop-A</td><td rowspan="2">9:30</td><td></td><td></td><td></td><td>1.00 1.00</td><td>0.47 0.46</td><td>0.31 0.38</td><td>0.27 0.31</td><td>0.18 0.19</td></tr> <tr> <td>OSISAF Metop-A</td><td></td><td></td><td></td><td></td><td>1.00 1.00</td><td>0.20 0.27</td><td>0.19 0.22</td><td>0.09 0.13</td></tr> <tr> <td>ACSPo Metop-B</td><td>9:30</td><td colspan="4">Correlation higher for different products from the same sensor</td><td></td><td>1.00 1.00</td><td>0.16 0.19</td><td>0.25 0.33</td></tr> <tr> <td>ACSPo Terra</td><td>10:30</td><td></td><td></td><td></td><td></td><td></td><td></td><td>1.00 1.00</td><td>0.28 0.27</td></tr> <tr> <td>ACSPo Aqua</td><td>13:30</td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td>1.00 1.00</td></tr> </tbody> </table>	Residuals (SST – Drifters)	~ECT								ACSPo NPP	IDPS NPP	NAVO NPP	ACSPo Metop-A	OSISAF Metop-A	ACSPo Metop-B	ACSPo Terra	ACSPo Aqua	ACSPo NPP	13:30	1.00 (Night) 1.00 (Day)	0.69 0.67	0.49 0.41	0.24 0.21	0.13 0.15	0.22 0.20	0.27 0.21	0.36 0.38	IDPS NPP		1.00 1.00	0.54 0.37	0.21 0.20	0.17 0.19	0.28 0.19	0.25 0.19	0.31 0.32	NAVO NPP			1.00 1.00	0.22 0.18	0.18 0.10	0.21 0.15	0.24 0.15	0.29 0.23	ACSPo Metop-A	9:30				1.00 1.00	0.47 0.46	0.31 0.38	0.27 0.31	0.18 0.19	OSISAF Metop-A					1.00 1.00	0.20 0.27	0.19 0.22	0.09 0.13	ACSPo Metop-B	9:30	Correlation higher for different products from the same sensor					1.00 1.00	0.16 0.19	0.25 0.33	ACSPo Terra	10:30							1.00 1.00	0.28 0.27	ACSPo Aqua	13:30								1.00 1.00

6. Summary

- ❑ Monitoring/Validation against L4 fields and QC'ed *iQuam* drifters shows:
 - Most products show comparable performance
 - In preparation for SLSTR, ARC AATSR (QF GE 3) retrievals are evaluated: Domain is ~6-9 smaller than from Metop, performance statistics comparable
 - NAVO VIIRS has better VAL stats than ACSPO, but in a ~1/3 retrieval domain
- ❑ Sensitivity to space-time window on monthly matchup shows:
 - At night, 20km/4hr, 10km/2hr, 5km/1hr, reduces # of matches but does not result in measurable improvements in VAL std dev
- ❑ Triple-Collocation analysis and residual correlation
 - Random errors in $1^\circ \times 1^\circ$ drifter data $\sim 0.18^\circ\text{C}(\text{night})/0.26^\circ\text{C}(\text{day})$, globally
 - Many products show a high degree of correlation in residuals (SST – drifters). The L4 producers may use this to minimize redundancy in input L2Ps

THANK YOU!
