# Agenda

1. Introduction, CESSDA® & Trust-IT
2. CESSDA Data Catalogue® - Discovery at national and European levels, **Alle Bloom, UK Data Service**
3. Resilience and living well beyond cancer: the relationship between emotional support and quality of life, **Patty Doran, University of Manchester**
4. Store and Protect with the CESSDA Data Management Guide®, **Gry-Hege Henriksen, Norwegian Centre for Research Data (NSD)**
5. Use case on Center for Longitudinal Studies - how to store and how to protect, **Danielle Freitas Gomes, Karen Dennison and Nasir Rajah, University College London**
6. Use case on The Five Safes framework for accessing sensitive data via the SecureLab at UK Data Service, **Beate Lichtwardt, UK Data Service**
7. Interactive Discussion - Connecting Researchers with CESSDA Service Providers to boost Societal Impact on Cancer and Major Chronic Diseases
8. Wrap up, CESSDA® & Trust-IT

# cessda Roadshow Series | 30 September 8-14-21-28 October 2021

# Data Management Expert Guide

## CESSDA Data Management Expert Guide User Story

Peter Čerče, Data Officer, Migrant Children and Communities in a Transforming Europe (MICREATE) project, tells his story on using the guide for general aspects of RDM; it would be particularly useful to have such exhaustive guides in other research fields too.

### The Researcher

I head the Centre for IT and Infrastructural Support to Research at the Science and Research Centre Koper as well as its Research Library. As a librarian, I am interested in the possibilities Open Access provides in managing research data. My daily tasks involve informing researchers and other data users about the concepts behind FAIR Data and how to make sure their data respects them.

### The research project

The Horizon 2020 project Migrant Children and Communities in a Transforming Europe (MICREATE) aims to gather their stories to support their needs and aspirations when it comes to integration. European countries and their education systems encounter many challenges due to ethnic, cultural, linguistic diversity, MICREATE aims to:

- improve knowledge about children's experiences of life in new social environments
- explore school peer dynamics
- help teachers and educational staff to work with diversity
- develop child-centered tools for stimulating migrant integration
- design child-centered integration policy recommendations.

In the MICREATE project I'm responsible for the Data Management Plan (DMP) and solving ethical issues in relation to Research Data Management (RDM). Ethical issues in data management is one of the main challenges in the MICREATE project as most of the qualitative research data will result from interviewing a particularly vulnerable group, namely migrant children.

### My use of the CESSDA DMEG

For the MICREATE data management plan (DMP) we consulted with (national) experts in the field. We met with the Slovenian Social Science Data Archive, who directed us to the CESSDA Data Management Expert Guide. We found the CESSDA Guide to be a very helpful tool, offering a wide variety of advice, tips, examples from experts in the field.

In preparing the initial version of the MICREATE DMP we were using the DMPonline tool, offered in the CESSDA Data Management Expert Guide The guide turned out to be very helpful in working in a consortium of 15 partners from twelve different countries. The CESSDA DMEG directs you to the European diversity issues in every step of the research data lifecycle.

I was particularly grateful for the way that the CESSDA Data Management Expert Guide is structured. It's fairly easy to find your way around, even though quantity of information can be intimidating. That said, Research Data Management in itself is such a vast field of expertise, that trying to find what you need in the enormous amount of information available online seems like a mission impossible. That's why it is so helpful to have a guide like CESSDA's, which gathers information in one place, from an array of international experts.

### Across disciplines

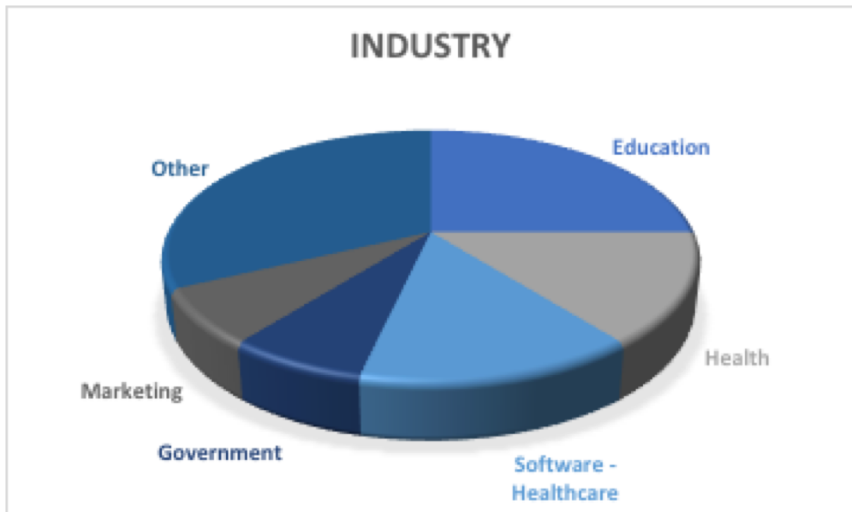

The Science and Research Centre Koper where I work consists of eight different research groups. Activities are predominantly based on interdisciplinary work, involving the humanities, social sciences and natural sciences. As much as the CESSDA Data Management Expert Guide is a helpful tool for general aspects of RDM; it would be particularly useful to have such exhaustive guides in other research fields too.

### EOSS in practice

I have been on the EOSS web portal and participated in only a few EOSS events.

I am definitely interested in attending training sessions on how to use EOSS services and tools. I hope to be more available in 2021.

# About you

While diving deep into the CESSDA Data Catalogue for discovery, we are very interested in learning about your user stories!

**HAVE YOU USED THE CESSDA DATA CATALOGUE FOR YOUR RESEARCH?**

**HAVE YOU USED THE CESSDA DATA MANAGEMENT EXPERT GUIDE?**

Got 3 minutes? We'd love your input!

Take our data users' survey by clicking the link in the chat! Or directly:

<https://www.surveymonkey.de/r/KGVN8S5>

To enter the raffle for a free Audible audiobook, type a random FOUR DIGIT NUMBER in the space provided. The winner will be announced in the chat at the end of the webinar.

*The survey data collected by CESSDA will improve CDC user experience. IP addresses are NOT collected. Emails given as part of the qualitative component will be deleted upon completion of the interview, in compliance with GDPR requirements.*

## English Longitudinal Study of Ageing

Abstract

FAQ's

Resources

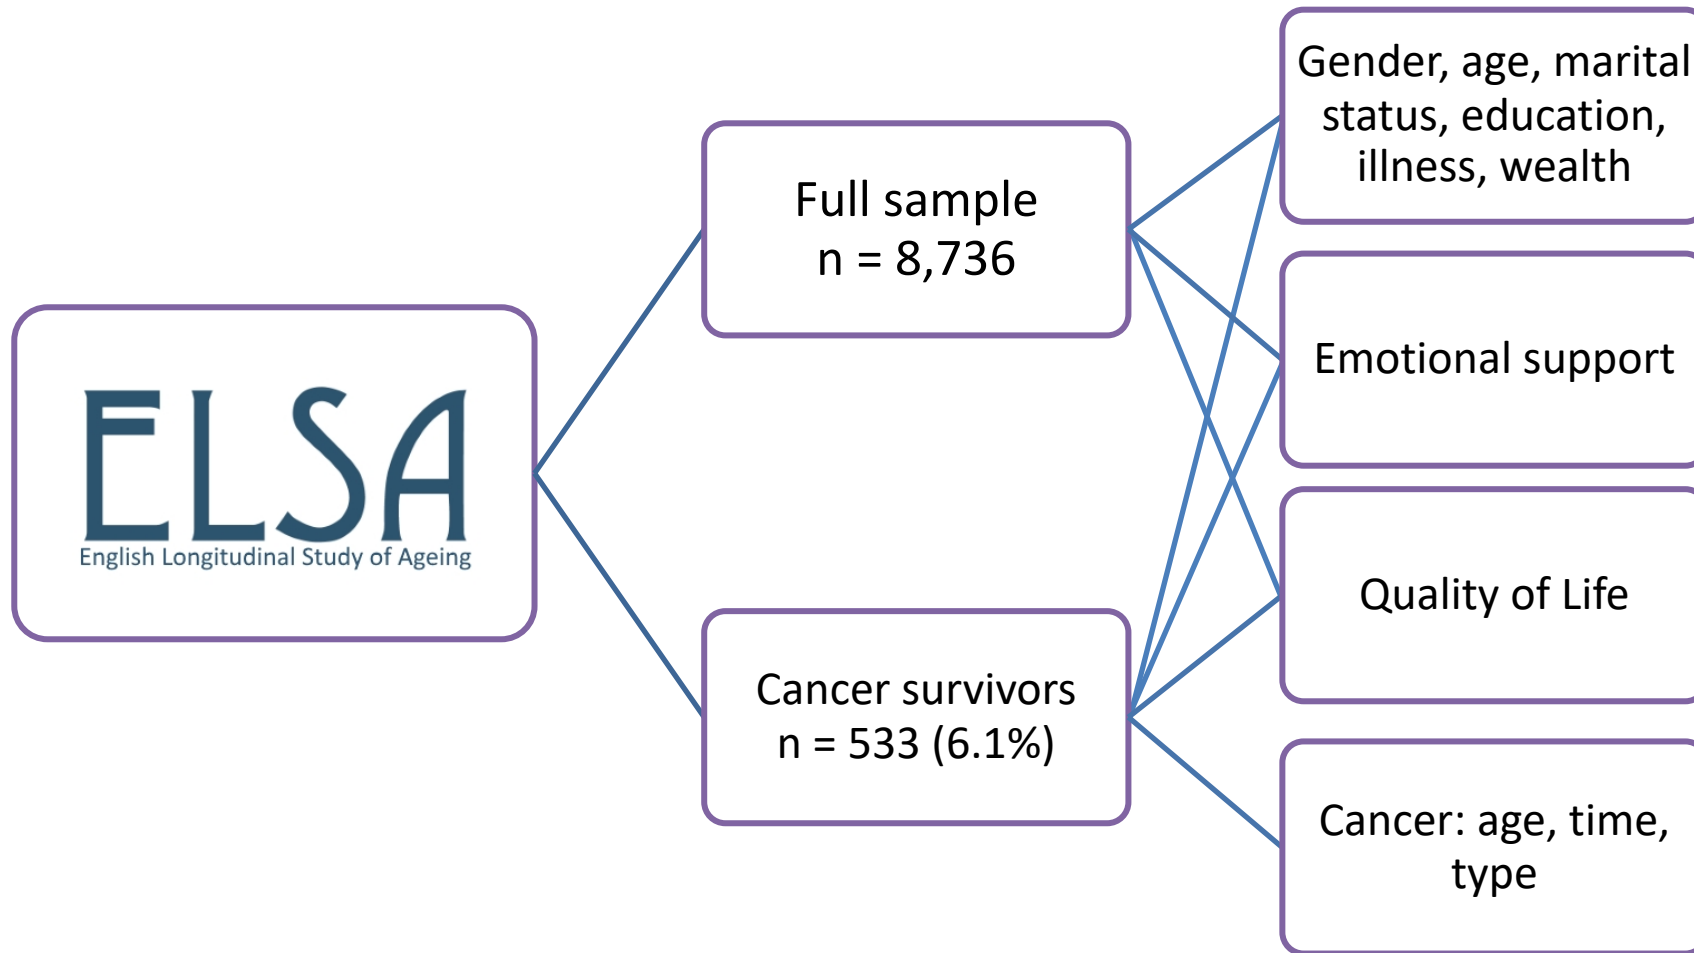

Access data

### Abstract

The English Longitudinal Study of Ageing (ELSA) study, which began in 2002 (though the sample was constructed from earlier data) is a longitudinal survey of ageing and quality of life among older people. It explores the dynamic relationships between health and functioning, social networks and participation, and economic position as people plan for, move into and progress beyond retirement. The study is funded jointly by UK government departments and the National Institute on Aging, in the USA.

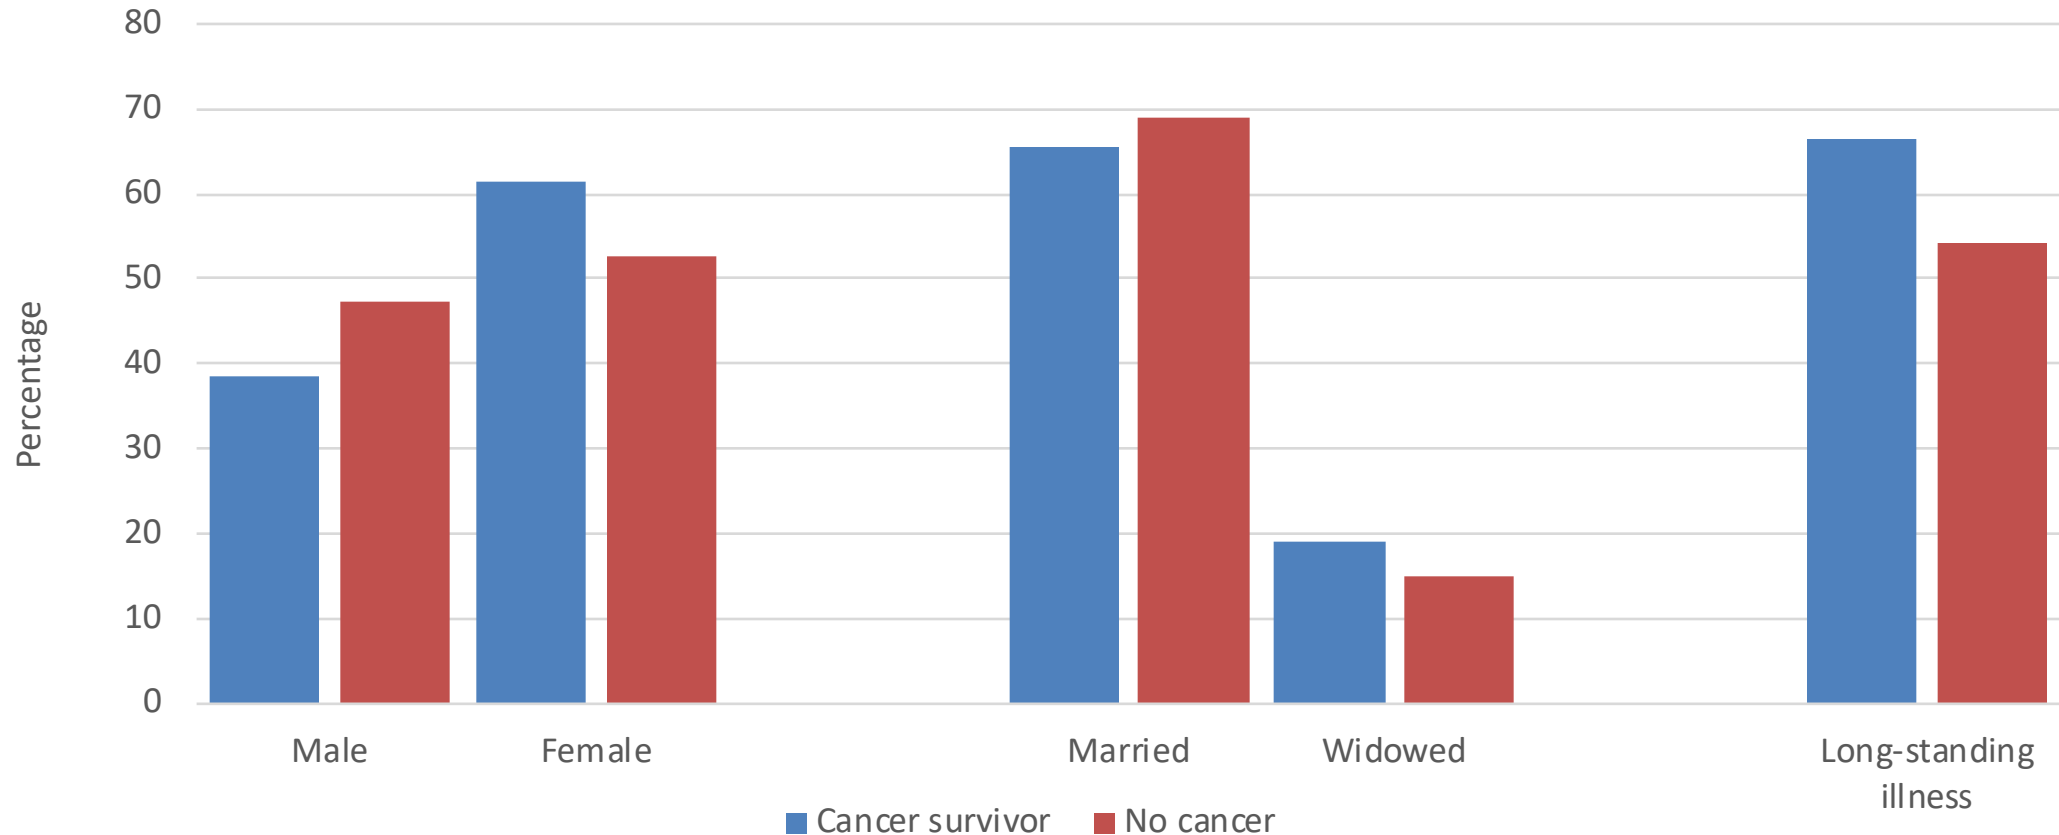

# Methods

# Sample Descriptives

**Significant differences between cancer survivors and older people without cancer in relation to gender, marital status and long-standing illness:**

# Emotional support

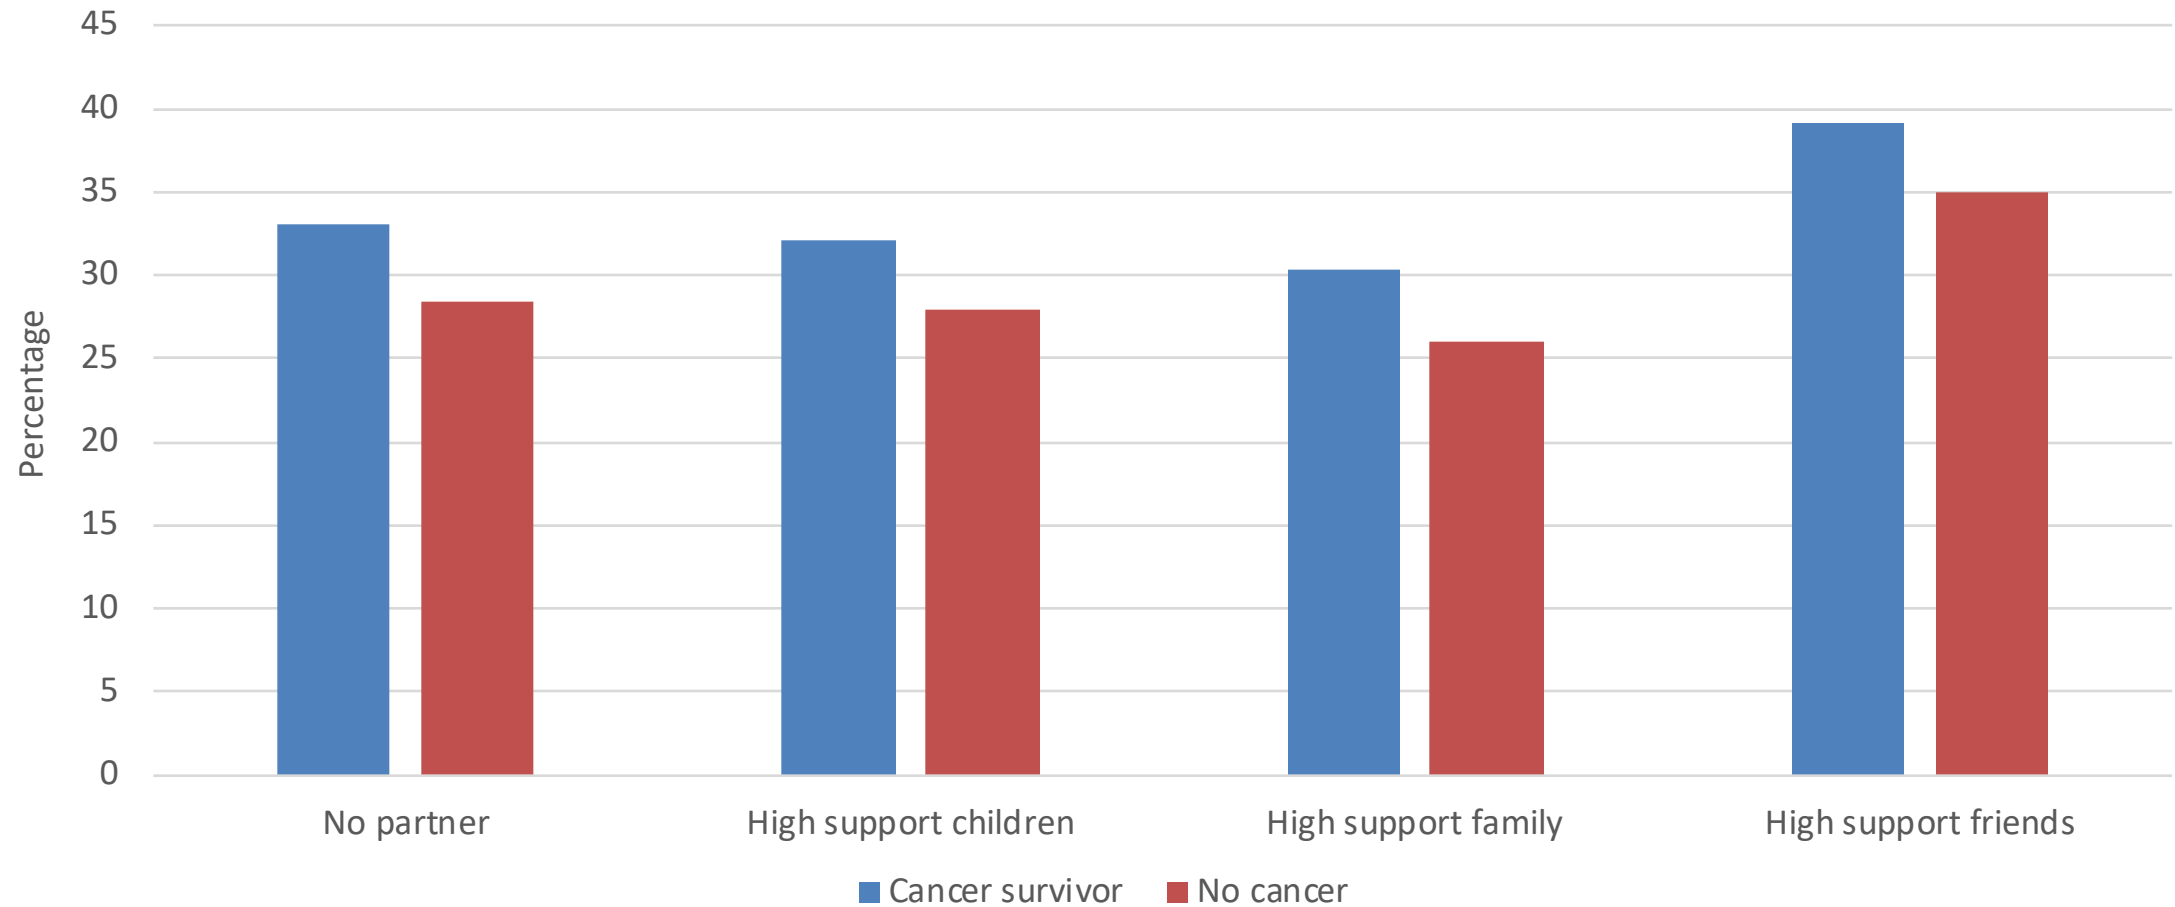

1. How much do they really understand the way you feel about things?
2. How much can you rely on them if you have a serious problem?
3. How much can you open up to them if you need to talk about your worries?

**Distribution of combined emotional support scale across sources of support:**

# Sample descriptives: emotional support

Significant differences between cancer survivors and older people without cancer in relation to emotional support:

# Quality of life

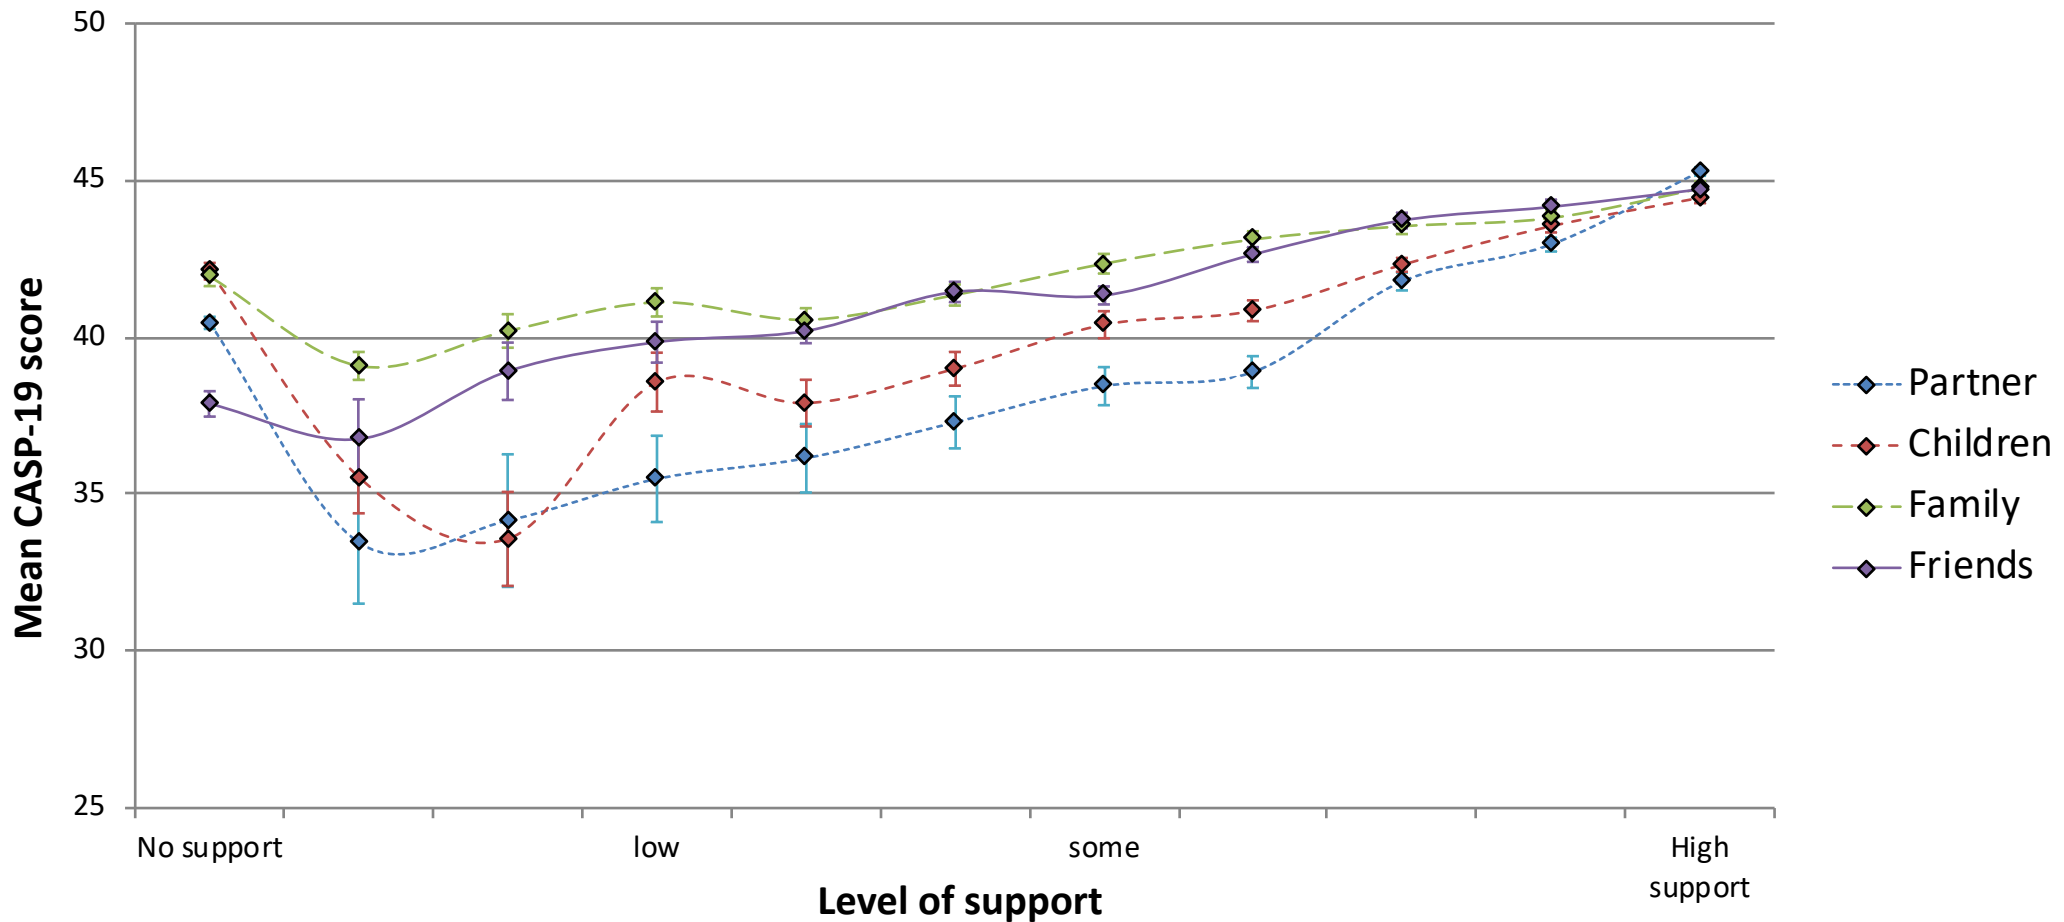

The CASP-19 QoL tool is a needs-based measure that covers four domains: Control, Autonomy, Self-realisation, and Pleasure (Hyde et al., 2003).

**Distribution of combined CASP-19 score across sample:**

# Quality of life and emotional support

Mean Quality of Life score by level of social support from partner, children, family and friends:

# Regression results

**Linear regression model of relationship between emotional support and quality of life with cancer as a binary variable (selected results):**

Notes: All variables significant to  $p=0.01$ , except cancer survivor  $p=0.05$ ; Constant  $B=53.64$  (SE 0.66)

# Discussion

- Positive relationship between emotional support and quality of life.
- Low (as opposed to no) emotional support was associated with the lowest levels of quality of life.
- The negative impact of having a cancer diagnosis added significantly to lower quality of life.

# Limitations

- Small sub-set of cancer survivors in ELSA
- More women, higher mean age, more likely to be widowed and have a long-standing illness.
- Cancer variables limited
- Sources of support limited

# Conclusions

- The relationship between emotional support and quality of life was similarly present for both cancer survivors and older people without cancer.
- However, low emotional support compounds with the independent detrimental effect on quality of life of being a cancer survivor.
- Low emotional support trend perhaps reflects complex situations.

# Older People Living Well Beyond Cancer: The Relationship Between Emotional Support and Quality of Life

Patty Doran, MSc<sup>1</sup> , Sorrel Burden, PhD<sup>1</sup>,  
and Nick Shryane, PhD<sup>1</sup>

## Abstract

**Objective:** To investigate the influence of emotional support on the quality of life (QoL) of older cancer survivors. **Method:** We use data from the English Longitudinal Study of Ageing to assess the relationship between perceived emotional support and QoL, comparing people who were cancer survivors ( $n = 533$ ) to people without cancer ( $n = 8,203$ ). **Results:** Most people reported high emotional support and had good QoL ( $M = 42.57$ , scale = 0-57). However, linear regression modeling showed cancer survivors had on average slightly lower QoL ( $-2.10$  SE = 0.82). Those who reported having low support reported much poorer QoL; this relationship was similar for both cancer survivors and people without cancer. **Discussion:** The impact of low emotional support on QoL compounds with the independent detrimental effect of being a cancer survivor. Interventions that increase emotional support are likely to improve QoL for cancer survivors.

# CLS Studies Linkage to Health Data

## **Record Linkage Managers**

Danielle Gomes

Karen Dennison

# Centre for Longitudinal Studies: we follow people across life

# Study timelines

# Typical information covered

 Birth (excluding Next Steps)	 School years	 Adult
<p>Household composition</p> <p>Parental social class</p> <p>Obstetric history</p> <p>Smoking in pregnancy</p> <p>Pregnancy (problems, antenatal care)</p> <p>Labour (length, pain relief, problems)</p> <p>Birthweight, length</p>	<p>Household composition</p> <p>Parental social class</p> <p>Parental employment</p> <p>Financial circumstances</p> <p>Housing</p> <p>Health</p> <p>Cognitive tests</p> <p>Emotions and behaviour</p> <p>School</p> <p>Views and expectations</p> <p>Attainment</p>	<p>Household composition</p> <p>Employment</p> <p>Social class</p> <p>Income</p> <p>Housing</p> <p>Health (including biomarkers)</p> <p>Well-being and mental health</p> <p>Health-related behaviour</p> <p>Training and qualifications</p> <p>Basic skills</p> <p>Cognitive tests</p> <p>Views and expectations</p>

# Data Linkage

- CLS has a data linkage programme to link a range of administrative data to the survey data
- CLS creates a randomised study ID for each participant (CLS ID)
- CLS sends matching variables such as name, address, sex, Dob and the CLS ID to the data providers
- The data providers link the study's participants to the people in their database and extract the corresponding health records
- The data provider removes the identifiable information, except for the CLS ID and sends the research data back to CLS
- CLS has a separation in place, the team that handles the identifiable information have no access to the research data
- The data is returned to the Research Data team, who has no access to the identifiable data
- The research data team cleans the data and carries out disclosure control of the data before depositing it at the UKDS

# Data storage

- Data is stored at the UCL Data Safe Haven
- The UCL DSH is certified to ISO 27001
- Staff and researchers using UCL DSH complete annual training
- Data access is limited to those authorised to access it
- Access to the UCL DSH is via remote desktop and requires multi-factor authentication
- In addition to a strong password, each user has to use a six digit number generated by a smartphone app or physical token at each time
- Once inside the environment, robust access control ensures that users can only examine information that they are approved to use

# What health data are available ?

## England (all studies)

- Inpatient care (including maternity data)
- Outpatient care
- Critical care
- Accident and Emergency

## Wales (MCS)

- Deposited with SAIL Databank
- Range of health data –
  - Cancer
  - COVID
  - Critical care
  - Emergency Department
  - Maternity
  - Outpatient
  - Primary Care GP data

## Scotland (NCDS, BCS70, MCS)

- Inpatient care
- Outpatient care
- Maternity records
- Prescribing information system
- Birth & neonatal records (MCS only)
- Child Health Records (MCS only)
- Immunisation (MCS only)

## Data typically include

Diagnostic codes (ICD-10)

Operation Chapter (OPCS-4)

Indices of Multiple Deprivation

Administrative data e.g. Health Authority

Dates of admission, discharge etc

# Negotiations with data controllers

- Lengthy process, can be costly
- Liaise with your legal team
- Establish legal basis for processing
- Avoid GDPR consent as legal basis
- Consider a sub-licensing arrangement
- Fulfilment of data controller requirements:
  - Data minimization
  - Applicants demonstrate public benefit/health and social care benefit
  - Institutional responsibility
  - Right to audit
  - Data security

# How are participants protected?

- Linkage is conducted only for those participants who consented to health linkage.
- CLS keeps participants informed about the linkage program via mailing and on the study website.
- CLS has a separation system which keeps identifiable information separate from research/attribute information.
- All data made available for research is pseudonymised using the study ID.
- Researchers applying to access the data will need to complete the mandatory training before they are allowed to access the data.
- Data is only provided under controlled access via the UKDS Secure Lab.
- Researchers willing to access must make an application detailing the intended analysis.
- Researchers must usually specify the variables that they require for the project and will only be given access to a tailor-made subset as specified in their application
- The user and their organisation will be required to agree and sign the confidentiality terms stated in the Secure Access agreement. By signing this, the user agree to respect the privacy of the participant's data they will receive and are reminded of penalties they are likely to incur if they don't comply.
- Disclosure control is conducted before the researcher can publish their papers.

# The importance of making this data available

- ❑ It is costly for each researcher to apply individually. By depositing it with the UKDS it is free at the point of use.
- ❑ Combined with the survey, this linked data has great potential to contribute to scientific research and as result improve the lives of people with specific health conditions.
- ❑ The linked data provides rich information about the individual's health and usage of NHS services, which is not yet available in all cohort studies.
- ❑ If the linked data is population representative, we will be able to leverage the rich nature of the birth cohort study for various pieces of research.
- ❑ Linked HES data can be used to predict non-response in the cohort studies (which is what CLS is currently doing).

Business	business microdata
Administrative	records for admin. data, for which ADRN has negotiated researcher access
Controlled International Microdata	IAB (Germany) CASD (France)

# Our data collections by access level

Data access conditions	Access level
Open Licence	Open
End User Licence (EUL) [Authentication]	Safeguarded
Special Conditions (SC) [Authentication]	
Special Licence (SL) [Authentication, Accredited Researcher Status]	
SecureLab Data Access (remote) [Authentication, Accredited Researcher Status, Training + Test]	Controlled
SecureLab Data Safe Room Access (on-site) [Authentication, Accredited Researcher Status, Training + Test]	

The Government Statistical Service Policy for the release of social survey microdata ensures compliance with the

- Code of Practice for Official Statistics (CoP),
- Statistics and Registration Service Act (SRSA), 2007.

# Managing data access nationally

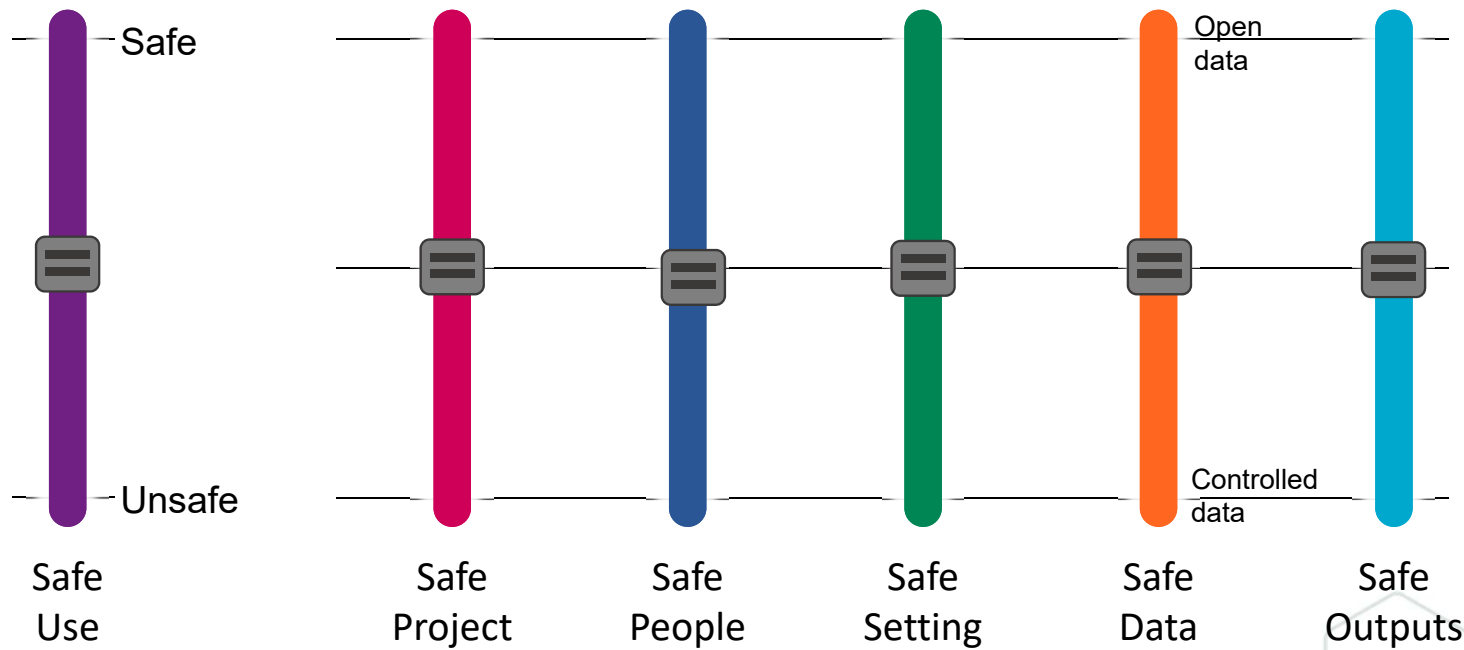

# The Five Safes – a framework for safe data access

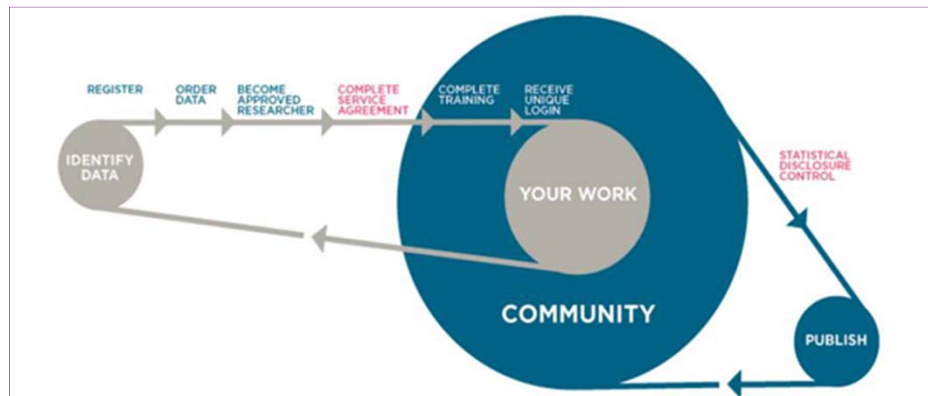

The Five Safes	
Is this an appropriate use of the data?	Safe projects +
How trustworthy are the researchers?	Safe people +
Does the environment prevent misuse?	Safe setting +
Is the data detail appropriate?	Safe data +
Is there any confidentiality risk from publication?	Safe outputs =
	Safe use

# Balancing the Five Safes

# UKDS SecureLab - remote access to controlled data

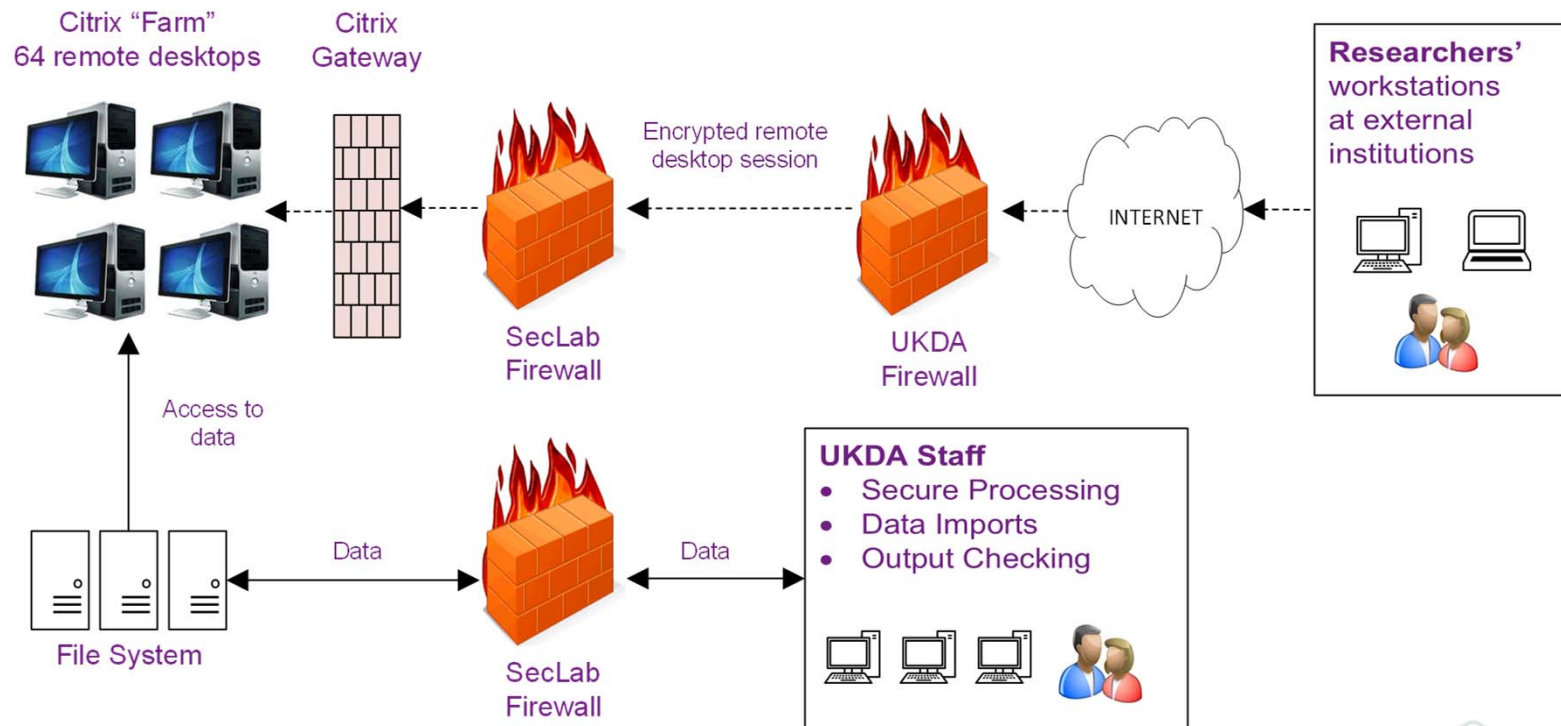

- Access via web-based interface that uses secure encrypted Citrix Virtual Private Network technology
- Data not downloadable, access remotely from organisational desktop or via the UKDA Safe Room or via one of the SafePods across the UK
- Outputs subject to Statistical Disclosure Control (SDC)

# UKDS SecureLab infrastructure

# UKDS SecureLab – 10 years remote access to controlled data for research

- 10 years operational (since 2011)
- No legal breach
- 938 active users (2021)
- Recently: Safe Room Remote Desktop Access to international controlled data
- Soon: Safe Room Remote Desktop Access to UKDS SecureLab data from abroad

Any questions?

Thank you.

# CESSDA Roadshow on Cancer & Major Chronic Diseases

1. Why is it important we continue to ask these health questions within social surveys?
2. How important is high quality data for cross-disciplinary and cross-national research?
3. How important is the support from service providers/data experts for your research workflow?
4. What is your advice for researchers trying to build on/reuse the huge amount of data already available on major chronic diseases and cancer?

# Roadshow on Circular Economy

**SAVE THE DATE**

**28 October 2021**

14:00-15:30 CEST

13:00-14:30 BST
