

Catalogue of the Benjamin Balansa moss collections from Paraguay in Herbarium Genavense (G)

Michelle J. Price

Abstract

PRICE, M. J. (2012). Catalogue of the Benjamin Balansa moss collections from Paraguay in Herbarium Genavense (G). *Candollea* 67: 153-179. In English, English and French abstracts.

One of the most significant bryophyte collections from Paraguay is that of the Frenchman Benedict (Benjamin) Balansa. His collections were distributed to, amongst other institutions, B, BM, G, H-BR, L, NY and PC. In Geneva, Balansa collections can be found in the historical herbaria of Boissier, Reuter-Barbey, Barbey-Boissier and the non G-DC De Candolle collection which were all incorporated into the municipal herbarium (G) of the Conservatoire et Jardin botaniques de la Ville de Genève. The French bryologist Emile Bescherelle worked on the majority of the Balansa moss collections from Paraguay, describing 73 new species from amongst this material. With the purchase of Bescherelle's herbarium by the BM, Balansa's original Paraguay specimens came to reside there. A total of 390 specimens are present in G for 158 Balansa collection numbers, including 22 specimens for 15 previously unpublished Balansa numbers. The 158 collection numbers and 390 specimens in G cover 88 specific and infraspecific names that represent 67 currently accepted taxa and eight *nomina nuda*. Of the 390 specimens, 160 are types including 3 lectotypes, 28 isolectotypes, 19 isotypes and 110 syntypes. For each taxonomic entry, the place of publication, the collection number, current name, and for the types the type status and typification, if found, are provided. A complete list of the

Résumé

PRICE, M. J. (2012). Catalogue des collections de mousses de Benjamin Balansa du Paraguay dans l'Herbarium Genavense (G). *Candollea* 67 : 153-179. En anglais, résumés en anglais et français.

L'une des collections de bryophytes du Paraguay les plus importantes est celle constituée par le français Benedict (Benjamin) Balansa. Ses collections ont été distribuées entre autres à B, BM, G, H-BR, L, NY et PC. A Genève, les collections de Balansa se trouvent dans les herbiers historiques Boissier, Reuter-Barbey, Barbey-Boissier ainsi que dans les collections De Candolle (non G-DC), toutes ces collections faisant partie de l'herbier général (G) des Conservatoire et Jardin botaniques de la Ville de Genève. Le bryologue français Emile Bescherelle a travaillé sur la plupart des collections de mousse de Balansa du Paraguay, décrivant 73 nouvelles espèces. A la suite de l'achat de l'herbier de Bescherelle par BM, les spécimens originaux de Balansa récoltés au Paraguay se trouvent maintenant conservés à cet endroit. Un total de 390 spécimens sont conservés à G représentant 158 numéros de la collection de Balansa, inclus 22 spécimens correspondant à 15 numéros de Balansa jamais publiés jusqu'ici. Les 158 numéros et 390 spécimens de G comprennent 88 noms spécifiques et infraspecifiques, représentant 67 taxa actuellement acceptés et 8 *nomina nuda*. De ces 390 spécimens, 160 sont des types parmi lesquels se trouvent 3 lectotypes, 28 isolectotypes, 19 isotypes et 110 syntypes. Pour chaque taxon, le lieu de

published Balansa collection numbers for the Paraguay mosses, including their current name, the name under which they were published and the place of publication, is also given herein.

Key-words

Paraguay – Mosses – Types – Catalogue – Benjamin Balansa – South America.

publication, le numéro de collecteur, le nom actuel et pour les types leur statut et typification (lorsque celle-ci a pu être trouvée), sont indiqués. Une liste complète des numéros de collection de Balansa pour les mousses du Paraguay comprenant le nom actuel, le nom sous lequel ils ont été publiés et le lieu de publication est également proposée.

Introduction

A recent updated checklist of the mosses of Paraguay reported 240 species, including 8 infra-specific taxa, from 94 genera and 38 families (O'SHEA & PRICE, 2008). One of the most significant bryophyte collections from Paraguay is that made by the Frenchman Benedict (Benjamin) Balansa during the late 1800's. Considered to be a "scientific voyager", he spent over ten years living, working and collecting plants in Paraguay. He was based in the capital Asunción, at the invitation of the government at that time (FOURIER, 2005), but travelled and collected in the departments of Paraguarí, Guairá, and Caaguazú. Balansa collected plants from all groups during his two stays in Paraguay: the first between 1873 and 1877, and the second between 1878 and 1884. His collections were distributed, amongst others, to B, BM, G, H-BR, L, NY and PC.

The majority of the Balansa collections of Paraguayan mosses were worked on by the French bryologist Emile Bescherelle (1828-1903) who was based in Paris (BESCHERELLE, 1877, 1885, 1891a, 1891b, 1891c). BESCHERELLE (1885) consists of a list of the mosses distributed by Balansa in 1884, some names were of new species which were validated in his later series of publications "*Selectio Novorum Muscorum*" (BESCHERELLE 1891a, 1891b, 1891c). Bescherelle described 73 new names based on the Balansa Paraguayan collections, 20 of which are apparent endemics to Paraguay (Table 1).

Appendix 1 contains a complete list of the published Balansa Paraguay collection number series for mosses, including reference information, the name under which the collection number was published and the name under which each specimen is currently known. The presence/absence of material in G for each collection number is indicated alongside abridged information on the locality, taken from the first publication in which the number appeared. The place of the first publication of each collection number is also given. Of the 195 published collection numbers and 5 collections distributed without a number G holds 390 collections for 158 numbers.

A list of previously unpublished Balansa collection numbers that were found in G is included at the end of the catalogue and in Appendix 1. This newly determined/verified material, accounts for 22 specimens for 15 previously unpublished Balansa collection numbers.

The life of Benjamin Balansa (1825-1891)

Benjamin Balansa, born Benedict Balansa, was the fourth son of Joseph and Jeanne (born Caussidou) Balansa. He was born on 28th of March, 1825 in the commune of Narbonne (department Aude, region Languedoc-Roussillon), France. Evidence points to the fact that his mother was travelling to Toulouse on the Canal du Midi at the time of his birth as there are no records indicating that the family ever resided in

Narbonne (ASTRE, 1947). According to the biography of Benjamin Balansa by ASTRE (1947) he studied in Sorèze (at the foot of Montagne-Noire in the department of Tarn) at 'Collège de Sorèze', and developed an interest in plants during his time there. When the family later moved to Paris he worked for two years as an editor at the 'Moniteur Universel'. In 1847, at the age of 22, he married Marie-Pauline Fabre and a year later began the activities that would occupy the next 44 years of his life, namely travelling, collecting plants and engaging in business ventures in foreign countries (for example, in Paraguay, Sicily, Turkey and Vietnam). He can be described as a "scientific voyager" as he had a particular interest in the exploration and exploitation of natural resources as well as in plant collecting (ASTRE, 1947). Many of his voyages were either conducted in the company of Edmond Bossier or where undertaken on his behalf. Balansa died in Hanoi, Vietnam, on the 22nd November 1891 at the age of 66.

Voyages of B. Balansa (from ASTRE, 1947):

1847-1848	First voyage to Algeria,
1850-1853	Second voyage to Algeria,
1854-1855	First voyage to the Orient (Turkey and Sicily),
1856	Second voyage to the Orient ("Capadoce"),
1857-1865	Third voyage to the Orient (Turkey and Sicily),
1866	Voyage to Lazistan (Turkey),
1867	Voyage to Morocco (Mogador, Atlas Mountains, Marrakech),
1868-1872	Voyage to New Caledonia and the Loyalty Islands,
1873-1877	First voyage to Paraguay,
1878-1884	Second voyage to Paraguay,
1885-1889	First voyage to Tonkin (North Vietnam), with a trip to Java,
1890-1891	Second voyage to Tonkin (died in Hanoi).

Catalogue of the Balansa moss collections from Paraguay in G

In G, the collections of Balansa from Paraguay are easily recognisable based on their distinctive labels. The collection series are entitled "B. Balansa - Pl. du Paraguay - 1874-1877" or "B. Balansa - Pl. du Paraguay - 1878-1884" and the labels themselves, written in French, generally have information on the locality and substrate for each specimen, the date (at least the year) the collection was made and a collection number. For many of the specimens in G a second number, the year of herbarium accession, has been added to the specimen label.

The original name under which the Balansa Paraguay collection numbers were published are listed alphabetically, with information on the place of publication and, for type specimens,

Table 1. – The 73 taxa, including 4 infra-specific names and 14 *nomina nuda*, described by Emile Bescherelle from material collected in Paraguay by Benjamin Balansa. The 20 taxa that are currently listed as endemic to Paraguay are indicated in bold. The year of publication is included after the author.

the type citation given. Publication details are given for specimens related to names originating from Paraguay material whereas publication information is not given where the name represents a straight determination of the material. For each record the basionym and/or published name is given alongside its modern name (in bold).

Information on the specimen labels is included for the type and non-type specimens. Label information for the first specimen entry of a series of specimens with the same collection number is given in full and if subsequent labels are identical then only the G barcode, type designation (if applicable) and herbarium of origin for each specimen is listed. If label information differs between labels with the same collection number then each variant is noted. When an herbarium accession year is present on the label this is indicated in square brackets.

Where a name has been typified then the published type designation and type location(s) are indicated, along with information on the G material. The terms lectotype, isolectotype, holotype and isotype are used when types have been specified and the term syntype is used herein wherever specific type designations were not found. For type ("Type specimens") and non-type specimens ("Specimens") the G barcode is given as an identifier. For non-type specimens the publication in which the collection number/s first appeared is given. Information on published *nomina nuda* is included and the specimens associated with these names are listed as "original material".

In G, Balansa collections can be found in the historical herbaria of Boissier, Reuter-Barbey, Barbey-Boissier, Duby, the non G-DC De Candolle collection as well as in the general collection. For any particular Balansa collection number present in G between 1 and 5 duplicates are found. Based on observations of the G collection, some of the Balansa duplicates appear to have been distributed without determinations as they have been annotated at a later date using the series of publications by BESCHERELLE (1877, 1885, 1891a, 1891b, 1891c).

The herbarium of origin of the specimen is noted using the following:

G = general herbarium of G (no specific source given on the label);

Herb. Barb.-Boiss. = Barbey-Boissier herbarium;

Herb. Boiss. = Boissier herbarium;

Herb. DC. = De Candolle herbarium (non G-DC);

Herb. Duby = Duby herbarium;

Herb. Reuter-Barb. = Reuter-Barbey herbarium.

In this work all author names are standardized according to BRUMMIT & POWELL (1992) and journal citations are according to the accepted standards of bryological literature (CROSBY, 1999). Accepted names are according to CROSBY & al. (1999) and the Missouri Botanical Garden database TROPICOS. Herbarium codes are according to Index Herbariorum.

sur l’écorce des arbres, 23 juillet 1881, *Balansa* 3638 (G
[1885], **G00042182**; Herb. Boiss., **G00042184**; Herb. DC.
[1884], **G00042183**).

Type designation. – BUCK (1987: 218): holotype (BM).

Hookeria subdepressa Besch. in J. Bot. (Morot) 5: 345. 1891.
= *Callicostella subdepressa* (Besch.) Broth. in Engl. &
Prantl, Nat. Pflanzenfam. I(3): 937. 1907.

Type citation. – “Guarapi, 1881, *Balansa* 3689”.

Type specimens. – **Syntypes:** Paraguay: Guarapi, dans les
forêts, 1881, *Balansa* 3689 (G [1885], **G00042270**; Herb.
Barb.-Boiss., **G00042271**; Herb. Boiss., **G00042272**;
Herb. DC. [1884], **G00042269**).

Type designation. – None found.

Comments. – Number 3689 was used by Müller (MÜLLER
& STEPHANI, 1887: 57) as original material for the *nomen
nudum* “*Hookeria paraguensis*”.

Hymenostomum balansaeanum Besch.

Specimens. – Bopicua entre Paraguari et Yaguaron, sur le
talus des chemins, juillet 1881, *Balansa* 3700 (G [1885],
G00042348; Herb. Boiss., **G00042352**; Herb. DC. [1884],
G00042350) [published in BESCHERELLE, 1885: 17].

Hypnum circinicaule Müll. Hal. in Rev. Bryol. 14: 57. 1887
[nom. nud.]

= *Sematophyllum circinicaule* (Müll. Hal.) Broth. in
Engl., Nat. Pflanzenfam. ed. 2, 11: 433. 1925.

Type citation. – “Sin. loc., *Balansa* 3692”.

Original specimen. – 3692. *Hypnum circinicaulis* C. Müller
n. sp. Peribebuy (Paraguay) *Balansa* (Herb. Barb.-Boiss.
[non-original *Balansa* label], **G00048085**).

Comments. – A specimen numbered 3692 from the locality
“Bords du Mbai” was named “*Rhaphidostegium circinale* (Hpe)” by BESCHERELLE (1885: 19) and later served
as the type of *Aptychus circinicaulis* Müll. Hal. (= *Sematophyllum circinicaule* (Müll. Hal.) Broth.), see under that
name. Since the above specimen does not have an original
Balansa label, and is assumed to be possibly erroneous, this
specimen is not included in Appendix 1.

Hypnum nanum Müll. Hal. in Rev. Bryol. 14: 57. 1887 [nom.
nud.].

Type citation. – “Sin. loc., *Balansa* 3695”.

Original specimen. – Guarapi, sur le tronc des arbres,
juillet 1881, *Balansa* 3695 (Herb. Boiss., **G00040495**).

Hypopterygium argentinicum Lorentz ex Müll. Hal.

= *Hypopterygium tamarisci* (Sw.) Brid. ex Müll. Hal., fide
KRUIJER (2002: 202).

Specimens. – Guarapi, dans les forêts, sur le tronc des
arbres, août 1879, *Balansa* 3628a (G [1885], **G00048104**;
Herb. Barb.-Boiss., **G00048105**; Herb. Boiss., **G00048103**;
Herb. DC. [1884], **G00048102**). Cordillère de
Mbatobi, près de Paraguari, sur les roches humides,
juin 1881, *Balansa* 3629 (G [1885], **G00048106**; Herb.
Barb.-Boiss., **G00048107**; Herb. Boiss., **G00048108**;
Herb. DC. [1884], **G00048109**). Guarapi, sur le tronc
abattu des arbres, dans les forêts, 8 avril 1879, *Balansa*
3630 (Herb. Barb.-Boiss., **G00048110**; Herb. Boiss.,
G00048111) [published in BESCHERELLE, 1885: 18].

Type designation. – STARK (1987: 177): lectotype (G).

Specimens. – Cerro Léon, près de Pirayu, sur l’écorce des arbres, 23 juillet 1881, *Balansa* 3667 (Herb. Boiss., **G00042097**; Herb. DC. [1884], **G00042098**). Bords du Mbai, sur les branches des arbres, juillet 1881, *Balansa* 3668 (G [1885], **G00042368**; Herb. Boiss., **G00042369**; Herb. DC. [1884], **G00042370**). Cordillère de Péríbebui, sur les écorces des arbres, 1879, *Balansa* 3669 (G [1885], **G00042096**; Herb. Boiss., **G00042094**; Herb. DC. [1884], **G00042095**) [published in BESCHERELLE, 1885: 18].

Leptohymenium squarrosum Hampe

= *Erythrodontium squarrosum* (Hampe) Paris, Index Bryol. (ed. 2) 2: 159. 1904.

Specimens. – Cordillère de Mbatobi, près de Paraguari, sur le tronc des arbres, 26 juin 1881, *Balansa* 3666 (G [1885], **G00042382**; Herb. Boiss., **G00042383**; Herb. Boiss., **G00042384**; Herb. DC. [1884], **G00042381**). Bords du Mbay, sur le tronc des arbres, juillet 1881, *Balansa* 3676 (G [1885], **G00042388**; Herb. Boiss., **G00042385**; Herb. Boiss., **G00042386**; Herb. DC., **G00042387**). Forêts Paraguari, *Balansa* 3676 (Herb. Boiss. [non-original *Balansa* label], **G00042395**) [published in BESCHERELLE, 1885: 19].

Lorentziella paraguensis Besch. in Mém. Soc. Sci. Nat. Cherbourg 21: 259. 1877.

= *Lorentziella imbricata* (Mitt.) Broth., fide LAWTON (1953: 287).

Type citation. – “Assomption, sur les pelouses, juillet 1876, *Balansa* 1258”.

Type specimens. – Syntypes: L’Assomption, sur les pelouses, juillet 1876, *Balansa* 1258 (Herb. Boiss., **G00046141**; Herb. DC. [1878], **G00040419**).

Type designation. – LAWTON (1953: 281): types (NY, PC), holotype location not indicated.

Specimens. – L’Assomption, dans les clairières des brous-sailles, juin 1881, *Balansa* 3623 (G [1885], **G00046142**; Herb. Boiss., **G00046143**; Herb. DC. [1884], **G00046140**) [published in BESCHERELLE, 1885: 17].

Macromitrium phyllophizans Müll. Hal. ex Besch. in Mém. Soc. Sci. Nat. Cherbourg 21: 262. 1877.

= *Macrocoma orthotrichoides* (Raddi) Wijk & Margad., fide VITT (1980: 413).

Type citation. – “Pirayu, sur les troncs d’arbres, *Balansa* 1237; Paraguari dans les forêts, *Balansa* 1240”.

Type specimen. – Isolectotype: Perayu, dans les forêts, sur le tronc des arbres, mai 1877, *Balansa* 1237 (Herb. DC. [1878], **G00048069**).

Type designation. – VITT (1980: 413): lectotype (NY).

Specimens. – Cordillère de Péríbebui, juillet 1879, *Balansa* 3665 (G [1885], **G00048124**; Herb. Boiss., **G00048117**; Herb. DC. [1884], **G00048121**). Guarapi, sur les troncs des arbres, 1881, *Balansa* 3670 (G [1885], **G00048125**; Herb. Boiss., **G00048118**; Herb. Boiss., **G00048119**; Herb. DC. [1884], **G00048120**). Cordillère de Péríbebui, juillet 1879, *Balansa* 3671 (Herb. DC., **G00048123**) [published in BESCHERELLE, 1885: 18].

Meiothecium fabronia Besch. in J. Bot. (Morot) 5: 343. 1891.

= *Sematophyllum fabronia* (Besch.) W. R. Buck in Contr. Univ. Michigan Herb. 15: 139. 1982.

Type citation. – “Cordillère de Péríbebui, juillet 1879, *Balansa* 3693, associé au *Rhaphidostegium (Aptychus) percircinale* C. Muell.”.

Type specimens. – Syntypes: Cordillère de Péríbebui, juillet 1879, *Balansa* 3693 (G [1885], **G00042265**; Herb. Boiss., **G00042266**; Herb. Boiss., **G00048077**; Herb. DC. [1884], **G00048076**).

Type designation. – Type designation not indicated in BUCK (1982).

Comments. – Number 3693 was used by Müller (MÜLLER & STEPHANI, 1887: 57) as original material for the earlier nomen nudum “*Hypnum percircinale*”.

Microdus paraguensis Besch. in J. Bot. (Morot) 5: 145. 1891.

= *Leptotrichella paraguensis* (Besch.) Ochyra in *Fragm. Florist.* 42: 563. 1997.

Type citation. – “Paraguay: Péribébui, *Balansa* 3661”.

Type specimens. – **Syntypes:** Cordillère de Peribébui, dans les terrains dénudés, juillet 1879, *Balansa* 3661 (G [1885], G00040428; Herb. Boiss., G00040425; Herb. Boiss., G00040427; Herb. DC., G00042267).

Type designation. – Type designation not indicated in OCHYRA (1997).

Comments. – Number 3661 was also used as the type for *Conomitrium polycarpum* Besch. (= *Fissidens hornschuchii* Mont.) with locality information “Paraguay” by BESCHERELLE (1891b: 252).

Specimen. – Yaguaron, sur les berges humides des ruisseaux, juillet 1879, *Balansa* 3659 (Herb. Boiss., G00040424).

Microthamnium eurystomum Besch. in Mém. Soc. Sci. Nat. Cherbourg 21: 269. 1877.

= *Mittenothamnium eurystomum* (Besch.) Cardot in Rev. Bryol. 40: 21. 1913.

Type citation. – “Villa-Rica, *Balansa* 1199, 1209, 1278”.

Type specimens. – **Syntypes:** Villa-Rica, dans les forêts sur la terre humide, septembre 1874, *Balansa* 1199 (Herb. DC., G00048082). Villa-Rica, dans les forêts, septembre 1874, *Balansa* 1209 (Herb. Boiss., G00048080; Herb. DC. [1878], G00048081).

Type designation. – None found.

Specimens. – Cerro-Leon, près de Diraya, sur l’écorce des arbres, 23 juillet 1881, *Balansa* 3639 (G [1885], G00048129; Herb. Boiss., G00048132; Herb. DC., G00048127). Guarapi, dans les bois, 1879, *Balansa* 3640a (Herb. Boiss., G00048126; Herb. Boiss., G00048130). Guarapi, dans les bois, mars 1880, *Balansa* 3641a (Herb. Boiss., G00048131; Herb. DC. [1884], G00048128) [published in BESCHERELLE, 1885: 19].

Neckera balansae Müll. Hal. in Hedwigia 36: 107. 1897.

= *Neckeropsis disticha* (Hedw.) Kindb., fide VAN DER WIJK & al. (1964: 435).

Type citation. – “Paraguay, Guarapi, in truncis arboretum; 1884, *Balansa* 3627”.

Type specimens. – **Syntypes:** Guarapi, sur le tronc des arbres, *Balansa* 3627 (G [1885], G00040434; Herb. Boiss., G00040432; Herb. DC. [1884], G00040433).

Type designation. – None found.

Neckeropsis undulata (Hedw.) Reichardt

Specimens. – Forêts situées à l’est de la Cordillière de Villa-Rica, 30 septembre 1877, *Balansa* 1255 (Herb. DC. [1878], G00040445) [published in BESCHERELLE, 1877: 265]. Cordillère de Villa-Rica, dans les forêts vierges, tronc des arbres, octobre 1877, *Balansa* 1255 (Herb. Boiss., G00040444). Guarapi, sur l’écorce des arbres, août 1881, *Balansa* 3625 (G [1885], G00040436; Herb. Boiss., G00040435; Herb. Boiss., G00040438; Herb. DC. [1884], G00040437). Cordillère de Mbatobi, près de Paraguary, sur le tronc des arbres, 26 juin 1881, *Balansa* 3626 (G [1885], G00040440; Herb. Boiss., G00040439; Herb. Boiss., G00040442; Herb. DC. [1884], G00040441) [published in BESCHERELLE, 1885: 18]).

Octoblepharum albidum Hedw.

Specimens. – Guarapi, dans les forêts, sur le tronc des arbres, mars 1880, *Balansa* 3654 (G [1885], G00040448; Herb. DC. [1884], G00040447; Herb. Duby, G00040446) [published in BESCHERELLE, 1885: 17]. Ecorce des arbres. Cordillère de Mbatobi, 24 mai 1883, *Balansa* 4256 (Herb. Barb.-Boiss., G00040450; Herb. DC. [1885], G00040451; Herb. DC. [1885], G00040452; Herb. Duby, G00040449) [published in MÜLLER & STEPHANI, 1887: 57].

Papillaria subnigrescens Besch. in Rev. Bryol. 12: 17. 1885 [nom. nud.].

Type citation. – “Guarapi, *Balansa* 3664, Paraguary, *Balansa* 3666a”.

Original specimens. – Guarapi, sur le tronc des arbres, 1881, *Balansa* 3664 (Herb. Boiss., G00040430; Herb. Boiss., G00040431). Cordillère de Mbatobi, près de Paraguary sur le tronc des arbres, 26 juin 1881, *Balansa* 3666a (G [1885], G00040422; Herb. Boiss., G00040420; Herb. DC. [1884], G00040421).

Phascum recurvirostrum Müll. Hal. in Flora 71: 5. 1888.

= *Tetrapherum recurvirostre* (Müll. Hal.) Broth. in Engl., Nat. Pflanzenfam. ed. 2, 10: 253. 1924.

Type citation. – “Yuguaron [Yaguaron], ad vias cavas, Julio 1879, *Balansa* 3657”.

Type specimens. – **Syntypes:** Yaguaron, sur le talus des chemins, juillet 1879, *Balansa* 3657 (G [1885], G00042349; Herb. Boiss., G00042347; Herb. DC. [1884], G00042351).

Type designation. – None found.

Comments. – Number 3657 was published as *Hymenostomum balanseanum* Besch. in BESCHERELLE (1885: 17) before being used as the type of *Phascum recurvirostrum* by Müller.

Philonotis balansaeana Besch. in Mém. Soc. Sci. Nat. Cherbourg 21: 264. 1877.

= *Philonotis curvata* (Hampe) A. Jaeger, fide DISMIER (1910: 8).

Type citation. – “Villa-Rica, sur la terre, septembre 1874, *Balansa 1195*”.

Type specimens. – Syntypes: Villa-Rica, sur la terre, septembre 1874, *Balansa 1195* (Herb. DC. [1878], G00040393). Forêts situées à l'est de la Cordillère de Villa-Rica, 30 septembre 1874, *Balansa 1195* (Herb. Boiss., G00040394).

Type designation. – None found.

Philonotula oreadea Müll. Hal. in Hedwigia 36: 99. 1897.

= *Philonotis uncinata* (Schwägr.) Brid., fide GRIFFIN (1994: 560).

Type citation. – “Paraguay, Paraguari, ad declivitates viarum, Julio 1881: B. *Balansa. Coll. No. 3655*”.

Type specimens. – Syntypes: Paraguari, sur le talus des chemins, juillet 1881, *Balansa 3655* (G [1885], G00040395; Herb. Boiss., G00040397; Herb. Boiss., G00040398; Herb. DC. [1884], G00040396) [published in BESCHERELLE, 1885: 18].

Type designation. – None found.

Comments. – Number 3655 was published by BESCHERELLE (1885: 18) as *Philonotis balansaeana* Besch. before being used by Müller as the type of *Philonotula oreadea*.

Physcomitrium luteolum Besch. in Mém. Soc. Sci. Nat. Cherbourg 21: 263. 1877.

Type citation. – “Assomption, talus ombragés, *Balansa 1230*”.

Type specimens. – Syntypes: Talus ombragés des chemins, L'Assomption, 20 août 1876, *Balansa 1230* (Herb. Boiss., G00046204). L'Assomption, sur les talus des chemins ombragés, 20 août 1876, *Balansa 1230* (Herb. DC. [1878], G00046205).

Type designation. – None found.

Specimens. – Guarapi, sur la terre humide, 10 août 1881, *Balansa 3648* (G, G00046212; G [1885], G00042195; Herb. Boiss., G00042193; Herb. DC. [1884], G00042194) [published in BESCHERELLE, 1885: 18].

Physcomitrium paraguense Besch. in Mém. Soc. Sci. Nat. Cherbourg 21: 261. 1877.

Type citation. – “Assomption, bords des mares desséchées et sur les pelouses, *Balansa 1229, 1231, 1232*”.

Type specimens. – Syntypes: L'Assomption, sur les pelouses, juillet 1876, *Balansa 1229* (Herb. Boiss., G00042185; Herb. DC. [1878], G00042187). L'Assomption, bord des mares desséchées, 1876, *Balansa 1231* (Herb. DC. [1878], G00042188; Herb. DC. [1878], G00042189).

Type designation. – None found.

Specimens. – L'Assomption, sur la terre humide, septembre 1878, *Balansa 3650* (G [1885], G00042191). Cordillère de Péréboui, sur la terre humide, juillet 1879, *Balansa 3650b* (Herb. Boiss., G00042186; Herb. Boiss., G00042192; Herb. DC. [1884], G00042190) [published in BESCHERELLE, 1885: 18].

Plagiothecium villae-ricae Besch. in Mém. Soc. Sci. Nat. Cherbourg 21: 271. 1877.

= *Isopterygium tenerifolium* Mitt., fide BUCK & IRELAND (1989: 19).

Type citation. – “Villa-Rica, *Balansa 1210*”.

Type specimens. – Isotypes: Villa-Rica, dans les forêts, septembre 1774, *Balansa 1210* (Herb. Boiss., G00046238; Herb. DC. [1878], G00046235).

Type designation. – BUCK & IRELAND (1989: 19): holotype (BM).

Specimens. – Cordillère de Péréboui, dans les terrains humides ombragés, juillet 1879, *Balansa 3636* (G, G00046236; Herb. Boiss., G00046237; Herb. DC. [1884], G00046239) [published in BESCHERELLE, 1885: 19].

Specimens. – Pastoréo, près de Caaguazu, dans les prairies marécageuses, janvier 1882, *Balansa* 3616 (Herb. Boiss., G00046938; Herb. DC., G00042378).

Tortella pseudocaespitosa (Müll. Hal.) Broth.

Specimens. – Cordillère de Péribébui, juillet 1879, *Balansa* 3652b (G [1885], G00042217). L’Assomption, sur les murs, septembre 1878, *Balansa* 3652c (Herb. Barb.-Boiss., G00042216).

Vesicularia glauca (Besch.) Broth.

Specimens. – Guarapi, dans les bois, mars 1880, *Balansa* 3641 (G [1884], G00042578; Herb. Boiss., G00042205; Herb. Boiss., G00042206).

Duplicated collection numbers within the *Balansa* Paraguay collection

Within the *Balansa* Paraguay collection (see Appendix 1) 15 collection numbers are duplicated. For six of these duplicated collection numbers (1199, 3624, 3661, 3673, 3679, 3686) locality information differs and the taxonomic determinations of the material differ to the extent that it can be assumed that these numbers were assigned twice. For one of the numbers (3657) locality information is identical but given the taxonomic determinations of the specimens it can be assumed that this number was assigned twice. For the remainder of the numbers (3619, 3645a, 3658, 3675, 3681, 3687, 3691, 3699) the locality information is the same (or very similar) or missing for one of the duplicated numbers and the specimen determinations are close (mostly in same genus). This would indicate that the specimens with these collection numbers may well have been determined differently by different authors or that two close

species were included within the original collection that was later split into duplicates. In some cases one of the duplicated numbers is a type for a particular name while the other represents a specimen of a different taxon.

Conclusion

In all 200 Balansa collection numbers for Paraguay have been located in the literature. G holds 158 of these collection numbers, as presented in Appendix 1. A total of 390 Balansa specimens are now known to be present in G for 88 names representing 67 currently accepted taxa and eight *nomina nuda*. Of the 390 Balansa specimens located to date in G 160 are types: 3 lectotypes, 28 isolectotypes, 19 isotypes and 110 synatypes. Seventeen original specimens for the 8 *nomina nuda* were also located. A total of 22 specimens for 15 previously unpublished Balansa collection numbers, representing 12 taxa, were enumerated herein.

As pointed out by BUCK (1985) the moss flora of Paraguay is poorly known, mainly owing to under-collecting within the country. This is echoed in the number of types that were encountered during this work for which no published designation could be found and in the high number of endemic moss taxa that are still listed for Paraguay. O'SHEA & PRICE (2008) highlighted that very few collections are known from the departments of Canindeyú, Ñeembecú, Misiones and San Pedro. These four departments contain areas that are potentially interesting bryologically given their location, topography and/or humidity levels (see ZARDINI, 1993 for an overview of the habitat types in Paraguay).

The widely distributed moss collection of Benjamin Balansa from Paraguay, with its 200 published numbers, is one of the most important of the historical bryophyte collections from Paraguay and one that has made a significant contribution to the understanding of mosses in the country. This catalogue of the published moss collections of Balansa from Paraguay in G and the full listing of the Balansa collection numbers linked to their current names (Appendix 1) provides information that should facilitate the integration of specimens that were distributed without determinations into herbarium collections as well as the inclusion of these collections in future taxonomic work on South American mosses.

Acknowledgements

This project was supported by Conservatoire et Jardin botaniques de la Ville de Genève (G). I thank Eva Maier (CJB) for her comments on an earlier version of this manuscript and for her invaluable contribution to bryology-based research at G. I especially thank Brian O'Shea for his permission to use and adapt his original list of Balansa Paraguay collection numbers for this work. I am grateful to Len Ellis for providing a

review of this manuscript and Lorenzo Ramella for his collaboration on the manuscript. Lorenzo Ramella kindly provided the French translation of the abstract.

Appendix 1. – A list of the published Balansa collection numbers from Paraguay (including 5 without a collection number). Numbers that represent type material are indicated in bold. Specimens held in G are marked «G» and those that were not found in G are marked «–». For each known Balansa collection number the name under which the specimen was published, the literature source(s) in which it was published and its current name are given. Specimens that have not previously been published are indicated as such. For specimens present in G the principal label-based locality is indicated whereas for specimens that are not present in G locality information has been taken from the associated literature.
