

3D PDF Instructions

Schultz et al., Siberian Petrosals

- 1.) For full functionality download the complete PDF file to your computer (if not fully downloaded the 3D functions are not working properly).
- 2.) Open the PDF file.
- 3.) Click in box with 3D item, it might take a second until a popup prompt appears asking if the 3D content should be enabled. Click box "Options" and choose to "trust the document" from the drop down list.
- 4.) Now click again in box with 3D item, it might take up to a minute to be ready (depending on your computer settings).
- 5.) Then the preset standard view (dorsal) of the 3D item appears.
- 6.) The 3D model can now be manipulated in all directions using the mouse cursor.
- 7.) To toggle the view of the single 3D elements (e.g., petrosal, endocast, nerves, and veins) use the check boxes in the model hierarchy (left column in PDF viewer, first box).
- 8.) Some standard views (e.g., dorsal, ventral, lateral, medial) are preset (left column in PDF viewer, second box). To quickly navigate to one standard view click on the camera icon of the respective view.
