

# Discussant Intervention on the Presentation *“What is Social Innovation in Practice?”* *AN EXPLORATION OF THE EUROPEAN SOCIAL INNOVATION DATABASE (ESID)”*

Dietmar Lampert, ZSI – Centre for Social Innovation, Vienna

RISIS2 – 9<sup>th</sup> Policymakers Session

Dec. 03, 2021

# Outline of Input

- Need for ESID & its approach
- Relation to own research on Social Innovation at ZSI
- Comments on selected results
- Possible future developments

# Why have I been invited?

- ZSI part of the KNOWMAK project and responsible for the development of the technological platform interfacing with its users
  - part of the humble beginnings of ESID
- SI-Drive project to map SI projects (precursor to and benchmark for ESID)
- ZSI has long been part of the conversation and an interest in advancing research

# Need for ESID & its approach

Need given because we want to

- better understand where social innovation occurs;
- better understand the factors that lead to SI;
- improve the framework conditions for SI; or
- understand links with other types of innovations.

Chosen approach keeps proving that it is feasible and sustainable.

# Relation to own research on Social Innovation at ZSI

- Currently working on a study for the SNSF – Swiss National Science Foundation
- Topic: *Social Innovation as Valuation and Outcome Category of SNSF Funded Research*
- SNSF
  - Funds basic science in all academic disciplines
  - Takes seriously
    - its independence from the government
    - bottom-up or curiosity-driven research
- In this project: motivated to consider the value of their funding from different angles

# Relation to own research on Social Innovation at ZSI

- Study approach: multi-method but focus but exploratory in nature
- Topic: *Social Innovation as Valuation and Outcome Category of SNSF Funded Research*
- Research questions:
  - *How often and how is social innovation as a research topic approached in SNSF-funded projects?*
  - *What is the contribution of SNSF funded research to the development of SI? How far does it go and where are the limits? What role do productive interactions play within the research process?*
  - *Is SI a suitable starting point for the valuation of, in particular, but not only SSH research?*

# Relation to own research on Social Innovation at ZSI

- Study works on sampled data across
  - Scientific disciplines
  - Age
  - Academic age
  - Gender
  - Programme type
  - Organisation type

# Challenge when studying SI in research projects

- Lack conceptual clarity
- Operationalising SI not trivial
- More meaningful to cluster *properties* given in definitions of SI
- Examine the data along those clusters/dimensions
- Understand and support the approach chosen by ESID
- ZSI follows a similar approach in its current research endeavour

# Elements of SI

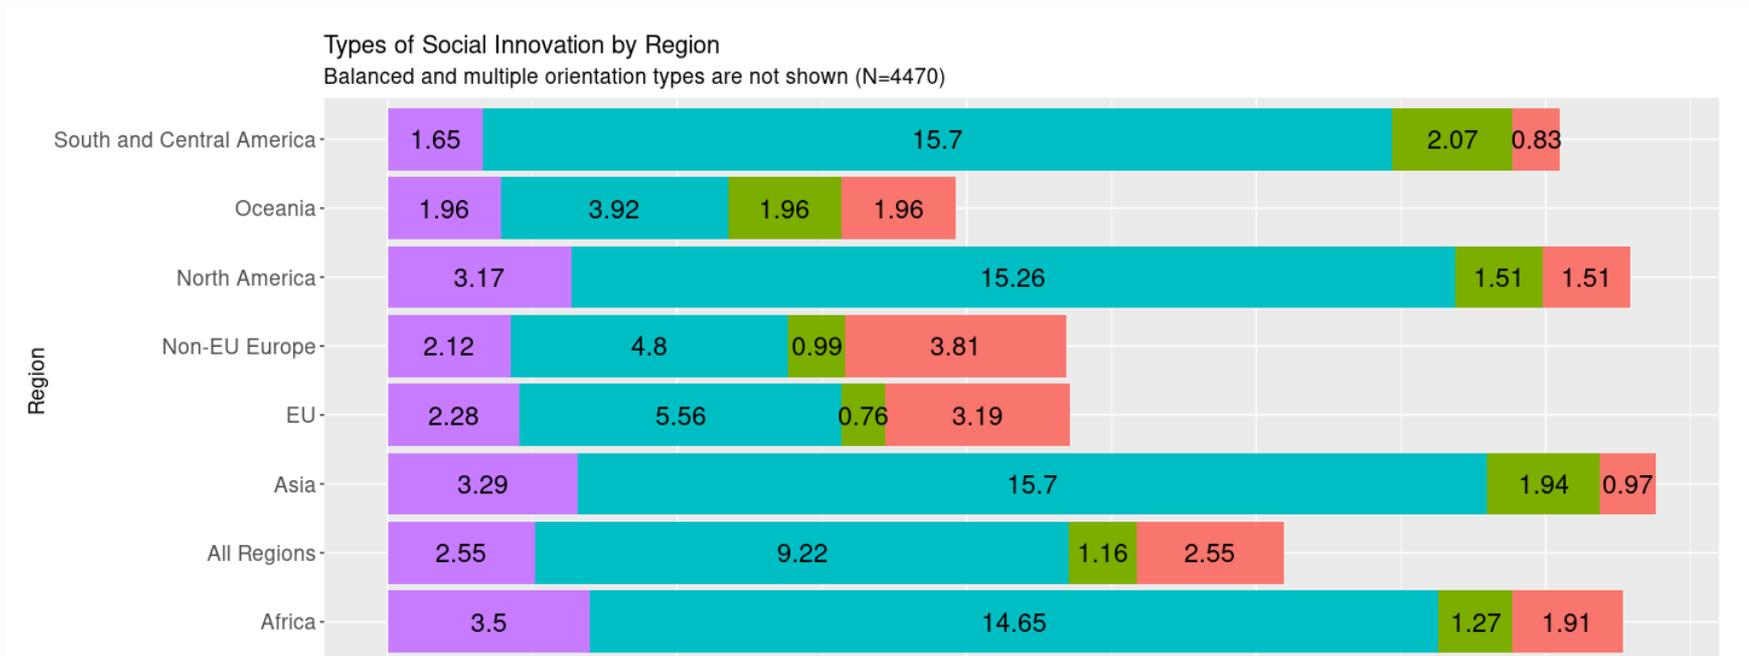

ESID	ZSI
Objectives	Solution-orientation
Actors and actor interactions	Actors & Networks
Innovativeness	Novelty in Context
Outputs / Outcomes	Outputs / Outcomes

- ⇒ Main difference: ZSI approach contains more criteria
- ⇒ Caveat: yet unclear whether they are significant (analytical efforts ongoing)

# Comments on selected results

- **“Types” of SI beyond SI definitions**
- Scoring idea corresponds with ZSI’s current research efforts
  - **broadens the discussion what accounts for SI**
  - **opens a discussion on measuring the “degree” of SI**
- Results on regional differences is enlightening – *policy pull* a possible reason but needs more research
  - Interest in CH: exception in Europe / correspond with e.g. US?
- Similarly interesting regarding topics but possibly heavily depending on used ontology

# Comments on selected results

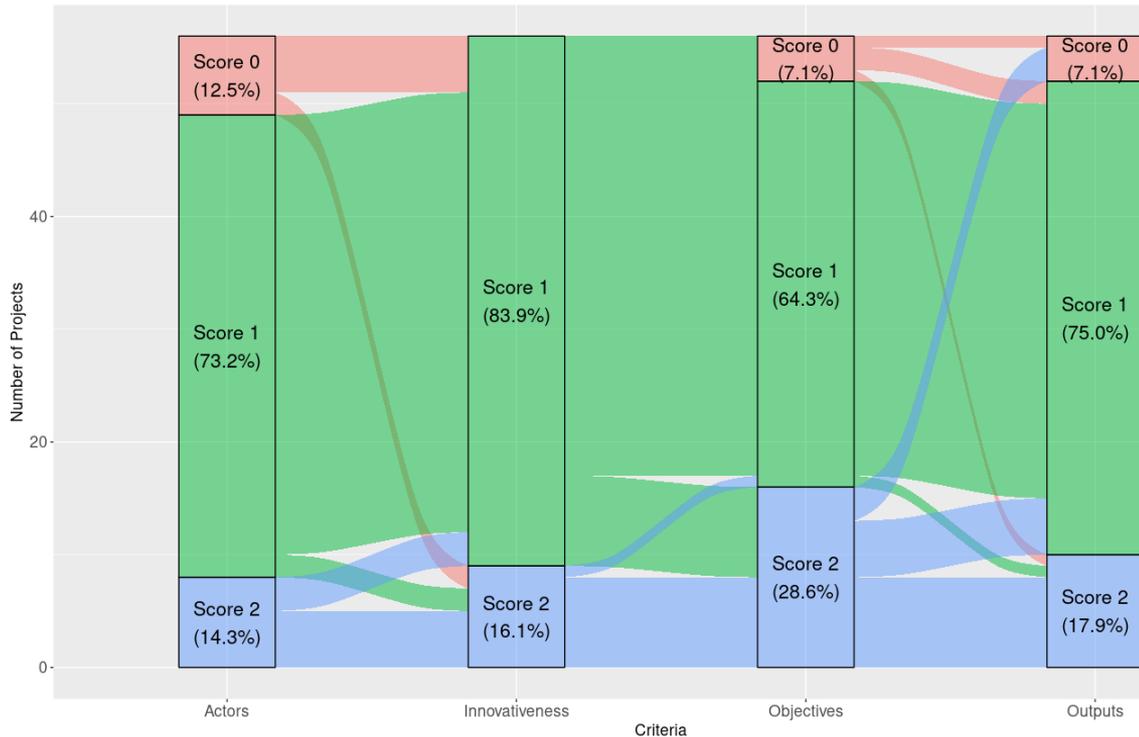

the [RISIS 2 project](#), funded by the European Union under Horizon2020 Research and Innovation Programme Grant Agreement n°824091. External links to social innovation projects were checked once work or they might redirect to a different website. They are provided for information purposes only, and we do not accept responsibility for their current content.

actors oriented innovativeness oriented objectives oriented outputs oriented

# Comments on selected results – Switzerland

Social Innovation Projects in Practice  
Stratified by scores for each criteria (N=56)

# Possible future developments

- Bring-your-own-data – possibility to tailor to custom data sets
- SI projects without a web presence – identify “offline” sources where they are catalogued (national/regional funding, foundations, societies, etc.)
- Selected social media channels/platforms
- Beyond limitations of KET and SGC (H2020) – ontology tailored to the thematic scope
  - alternative ontologies – possibly be able as user to choose an ontology
- Further features of ESID in terms of functionality and usability

# Closing words

- Tipping my hat to you for this huge leap forward
  - ESID's potential was considerable in the beginning but now it does offer exciting results
- Interested in
  - benchmarking our findings with the capabilities of ESID and
  - triangulating the results of our model / theory-building with yours;
  - opens a new discussion on types of SI and the “degree” of SI in projects
- Achievements allow many development possibilities – which ones will you pick up?

# THANK YOU!
