

Zenodo za istraživače, nastavnike i saradnike

Predrag Pejović, Milica Ševkušić, Nadica Miljković

Zajednica otvorene nauke Srbije, 20.12.2021.

o čemu ćemo pričati?

- ▶ (Pe)ja:
 - ▶ kako smo počeli da koristimo Zenodo na ETF?
 - ▶ šta nam je bilo potrebno?
 - ▶ kako smo Zenodo iskoristili u nastavi?
 - ▶ kako smo Zenodo iskoristili u nauci?
 - ▶ šta je to što nam Zenodo pruža?
- ▶ Milica:
 - ▶ ISBN
 - ▶ ISSN
 - ▶ CIP
 - ▶ DOI
 - ▶ ... (da znam šta, pričao bih ja)
- ▶ Nadica:
 - ▶ kako sve to zaista možete da uradite ...
- ▶ Q&A

kako smo saznali za Zenodo?

- ▶ PSSOH konferencija #1, sometime 2018 ...
- ▶ tri potpuno različite osobe u 102 levo ...
- ▶ Nadica organizovala ...
- ▶ Milica došla ...
- ▶ iskreno, nisam očekivao apsolutno ništa dobro ...
- ▶ potpuno iznenađenje!
- ▶ mentalna rezonansa, kako ćemo kasnije videti i na teme Le Corbusier i akrilnih boja
- ▶ predrasude ne rade uvek!
- ▶ **Zenodo!**
- ▶ ... pa da probamo!

šta nam je bilo potrebno?

- ▶ već je bilo jasno da je tehnologija štampanja prošlost ...
- ▶ kao i da od autorskih prava ne zarađuju autori ...
- ▶ počela masovna distribucija nastavnih materijala studentima u pdf formatu preko interneta ...
- ▶ potreban vam je server koji ima protok ...
- ▶ radosti socijalizacije: moja iskustva sa mrežama ...
- ▶ sami pravili svoje servere ...

šta nam je bilo potrebno?

- ▶ potreban nam je ponekad veći protok; i backup; i nezavisnost!
- ▶ problem autorstva, iskustva sa zbirkama zadataka ...
- ▶ mogu li negde da „zavedem“ nastavni ili naučni materijal?
- ▶ ETF praksa KK-e: ISBN
- ▶ to smo uzimali sami za sebe ...
- ▶ CIP? Milica će to; znam minimalno koliko moram
- ▶ DOI?
- ▶ Zenodo: server + protok + backup + DOI!
- ▶ reče nam Milica; probasmo; the rest is history!

šta nam Zenodo daje?

- ▶ repozitorijum, dostupan online; serveri, protok, backup ...
sve to besplatno
- ▶ javna institucija (p)održava, CERN, OpenAIRE;
nije profitna društvena mreža
- ▶ garancija čuvanja sadržaja bar 25 godina
- ▶ besplatan DOI
- ▶ lako korišćenje
- ▶ globalni repozitorijum; nezavisnost
- ▶ nema reklama!

kako smo Zenodo iskoristili u nastavi?

Laboratorijske vežbe iz električnih merenja, vežba broj 8: Merenja na kolima sa raspodeljenim parametrima

Pejovic, Predrag

U ovoj vežbi se istražuju efekti karakteristični za kola sa raspodeljenim parametrima kod kojih u model kola ulaze i prostorne dimenzije kola, a ne samo električni parametri kola i vremena. U vežbi će biti razmatran najnedostavniji slučaj kada je jedina prostorna dimenzija koja je od značaja dužina voda. Studenti treba da uoče efekte prostriranja signala po vodu: kašnjenje i stabiljenje. Takođe, studenti treba da uoče kako se posmatranjem reflektovanog talasa i merenjima na njemu može identifikovati i ustavljiviti gde je na vodu došlo do prekida ili kratkog spoja. Biće ilustrovan efekat frekvenčne zavisnosti ulazne impedanse otvorenog i kratko spojenog voda koja ispoljava beskončano mnogo rezonansu iz kojih je moguće odrediti dužinu voda.

Očekuje se da studenti kroz vežbu steknu iskustvo u povezivanju kola sa raspodeljenim parametrima i unaprede svoje veštine u izboru odgovarajućih parametara za prikazivanje slike na ekranu osciloskopa i merenju vremenskih intervala i naponskih nivoa. Takođe, studenti će stići osеćaj da je merenje prostranja signala brzina bliskim brzini svetlosti moguće i relevantno, da se na u laboratoriju ostvarivim frekvenčnjama otvoren vod može ponašati kao kratak spoj i obrnuti, kratko spojen vod kao otvorena veza. Stavide, iz takvih mjerila je moguće odrediti dužinu voda.

Teme obradene u ovoj vežbi imaju teorijsku podlogu obradenu u predmetu Teorija električnih kola. Stoga, studentima se preporučuje da pre vežbe prouči teorijske osnove obradene u ovom predmetu.

Peak Detector and/or Envelope Detector – A Detailed Analysis –

Pejović, Predrag

In this document, a simple circuit constructed using a diode, a resistor, and a capacitor, utilized as a peak detector and/or as an envelope detector is analyzed. The analysis is approached by applying approximate methods and by a mix of exact and numerical methods, aiming design guidelines and understanding of the circuit operation. Approximate and exact approaches are compared, and a region where the approximate analysis provides adequate answers is identified. Ability of the circuit to track the envelope variations is analyzed, and it is shown to depend both on the circuit time constant and the output voltage value, i.e. the modulation signal frequency and the modulation index. Relevant relations are derived and presented. Finally, distortion of the output voltage caused by the output voltage ripple is addressed, and averaged model of the circuit is derived. It is shown that average of the output voltage over the carrier period is increased about three times when filtering of the output voltage is applied. Transfer function for averaged waveforms of the envelope detector is derived, containing slight attenuation and a real pole at the double of the carrier frequency.

Resumen: U radi je dat priler osnovnih ideja slobodnog softvera i radim njihove realizacije primenom otvorenog hardvera. Ovaj priler je namenjen ljudima koji koriste laptopa. Razmotrava se generalizacija ideja slobodnog softvera na ostala dela kroz svet radia, a posebno na hardver, sa konkretnim osvrtom na odgovarajuće licence primenom tim slučajevima. Naglašena je i obrazložena matica između slobodnog i besplatnog softvera.

Ključne reči: Licence, otvoreni hardver, slobodni softver, softver otvorenog koda

Experimental Verification of Nonlinear Effects in Peak Limiting Current Mode Controlled Boost Converter

Glisic, Marija; Pejovic, Predrag

Compressed file contains results of experimental verification of nonlinear effects in peak limiting current mode controlled boost converter. Circuit diagrams are given in files **power.pdf** and **control.pdf** in the root directory. Directories

M-2019-05-02-8kHz-12V
M-2019-05-02-8kHz-17V
M-2019-05-02-8kHz-24V
M-2019-05-02-8kHz-29V

contain the experimental results for Vout=12V, Vout=17V, Vout=24V, and Vout=29V. Each directory contains .npy files with numerical data, figures recorded by the oscilloscope, figure that depicts measured output current of the converter as it depends on the assigned control voltage, and programs that controlled the measurements. Out of 15009 files in each directory 15003 files are oscilloscope recordings, **lout.npy** contains measured output current data, **Vg.npy** contains assigned control voltage data, **figure.py** is a Python 2 program used to plot lout(Vg), which is stored in **figure-xy.pdf** (xy stands for the actual output voltage), while **oscbus.py** and **overjm.py** are programs used to control the experiment. Experiments are controlled by a computer running under GNU/Linux operating system.

Analysis of Nonlinear Effects in Peak Limiting Current Mode Controlled Converters

Gligic, Marija; Pejovic, Predrag

This compressed file contains simulation programs, simulation results, figures that depict the results, as well as the animations that illustrate nonlinear effects in peak limiting current mode controlled converters. The simulations are performed using Python 2 programming language using pylab environment (numpy, scipy, matplotlib, ipython) under Ubuntu 18.04 operating system.

moj zaključak

- ▶ moj problem je rešen: hvala Milici i Nadici!
- ▶ imam server, protok i DOI, „zavođenje“
- ▶ ostaje dostupno i arhivirano
- ▶ zna se autorstvo
- ▶ jako korisno u nastavi!
- ▶ jako korisno u nauci!
- ▶ planovi, Johann Walter Kolar paper ...
- ▶ sve ovo ne bismo znali da Nadica nije pravila konferenciju i dovela Milicu
- ▶ ... i zato je dobro da budemo u kontaktu i razmenjujemo iskustva!
- ▶ a sada ...
