[SARSPR20]³ Attitudes towards SARS-CoV-2 Vaccination, 2020 : Convenience Sample

Odnos do cepljenja proti SARS-CoV-2, 2020: Priložnostni vzorec

Overview

| | |
|----------------|-------------|
| Identification | sarspr20-en |
|----------------|-------------|

Abstract

In December 2020, the SARS-CoV-2 vaccine was first approved in the Western world. However, the effectiveness of national vaccination plans depends on the willingness of the population to get vaccinated. Previous research on vaccine hesitancy has shown various factors that influence the decision to vaccinate such as gender, age, education, socioeconomic status, profession, experience with vaccinations, experience with the disease, and trust in experts. For better understanding of attitudes towards COVID-19 vaccination a cross-sectional survey was conducted of the Slovenian population. 12,042 individuals responded to the online survey. Ordinal regression analysis was used with mediation to study the interaction of different factors that impact the intent to vaccinate. In addition, textual analysis was run on open-ended question response data to get a better insight into the motivations behind the answers. The data was weighted by Valicon, who used the questions on his JazVem panel.

Sampling

Sampling Procedure

Non-probability: Availability

Non-probability: Respondent-assisted

There was no specific sampling, a link to the survey was provided to 169 media and other organizations with a request to publish it on their communication channels. Participation in the survey was voluntary.

Response Rate

Taking into account 45,633 unique clicks on the survey, the response rate is 26.4 % compared to 12,042 fully completed surveys. However, if we consider the survey link might have been seen by more than 400,000 people online (based on the sum of number of followers of the contacted organisations assuming no overlap), the response rate might be as low as 3 %.

Weighting

The data is weighted. The variable Wrakin1 is a poststratification weight calculated in a combination of sex-age and region, with the maximum weight set at 4.8 and then cut at 3. Education was not used due to the high proportion of highly educated, which would result in too large weight range. These are the population parameters of SORS. The data was weighted by Valicon, who also used the questions on his JazVem panel.

Data Collection

| | |
|------------------------------|--|
| Data Collection Dates | start 2020-12-17 end 2020-12-27 |
| Time Period(s) | single 2020-12 |
| Data Collection Mode | Self-administered questionnaire: Web-based |

Data Collection Notes

Data were collected using the 1ka online survey. The link to the survey was sent to 169 media and other organizations with a request to publish it on their communication channels. The respondent decided for himself whether to complete the survey or

not. In a period of 11 days, 45,633 unique clicks were recorded on the survey, of which 18,277 respondents began to respond to the survey, and 12,042 respondents completed it in total.

Questionnaires

Structured questionnaire The questionnaire was developed on the basis of previous studies and includes 11 closed-ended and one open-ended question.

|--------------------------|---|

Supervision

To reduce non-responses, answers to the questions in the online survey were mandatory.

Data Processing & Appraisal

Data Editing

Data was cleaned. The clean-up was done in such a way that all units that did not complete the survey in full were removed from the database.
