

Description of the keys and values of each JSON object in **submissions** files

Key	Value Type	Appears	Description	Possible values
title	string	always	Title of the submission	any string
body	string	always	Text posted along with the submission	any string
user	string	always	Username of the submission creator	any string
time	string	always	Time the submission was posted, HH:MM:SS	any valid time
date	string	always	Date the submission was posted YYYY-mm-dd	any valid date
upvotes	integer	always	Number of upvotes	any integer
downvotes	integer	always	Number of downvotes	any integer
domain	string	always	Domain the submission links to	any string
link	string	always	Unique submission URL	any string
submission_id	integer	always	Unique submission ID	any integer
subverse	string	always	Full name of the subverse	any subverse name

Description of the keys and values of each JSON object in **comments** files

Key	Value Type	Appears	Description	Possible values
body	string	always	Comment content	any string
user	string	always	Username of the comment creator	any string
time	string	always	Time the comment was posted, HH:MM:SS	any valid time
date	string	always	Date the comment was posted YYYY-mm-dd	any valid date
upvotes	integer	always	Number of upvotes	any integer
downvotes	integer	always	Number of downvotes	any integer
comment_id	integer	always	Unique comment ID	any integer
depth	integer	-1 if unknown	Tree depth level of the comment	any positive integer
subverse	string	always	Full name of the subverse	any subverse name
root_submission	String	always	Submission ID the comment belongs to	any valid submission ID

Description of the keys and values of each JSON object in **user_profiles.ndjson** file

Key	Value Type	Appears	Description	Possible values
user	String	always	Username	any string
reg_date	String	always	Registration date, YYYY-mm-ddT00:00:00	any valid date
moderates	List of strings	always	Subverses the user moderated	empty list if the user did not moderate any subverse, any subverse names otherwise
owns	List of strings	always	Subverses the user created	empty list if the user did not own any subverse, any subverse names otherwise

Description of the keys and values of each JSON object in **subverse_profiles.ndjson** file

Key	Value Type	Appears	Description	Possible values
subverse	string	always	The full name of the subverse	any string
subscriber_count	integer	always	Number of subscribers	any integer
about	string	always	Description of the subverse	any string, empty if no description
date_created	string	always	Date the subverse was created, YYYY-mm-ddTHH:MM:SS	any valid date and time
