1 function fe2dx_r_fast ( alpha, beta, gamma, delta, T, delt, u0f, v0f, k1, k2 )
2 %*****80
3 %
4 %% FE2DX_R_FAST applies Scheme 1 with Kinetics 1 to predator prey in a region.
5 %
6 % Discussion:
7 %
8 % FE2DX_R_FAST is a "fast" version of FE2DX_R.
9 %
10 % FE2DX_R is a finite element Matlab code for Scheme 1 applied
11 % to the predator-prey system with Kinetics 1 solved over a region
12 % which has been triangulated. The geometry and grid are read from
13 % user-supplied files 't_triang.dat' and 'p_coord.dat' respectively.
14 %
15 % Robin boundary conditions are applied.
16 %
17 % This function has 10 input parameters. All, some, or none of them may
18 % be supplied as command line arguments or as functional parameters.
19 % Parameters not supplied through the argument list will be prompted for.
20 %
21 % The parameters ALPHA, BETA, GAMMA and DELTA appear in the predator-prey
22 % equations as follows:
23 %
24 %      dUdT =          nabla U +          U*V/(U+ALPHA) + U*(1-U)
25 %      dVdT = delta * nabla V + BETA*U*V/(U+ALPHA) - GAMMA * V

46 %
47 % Parameters:
48 %
49 % Input, real ALPHA, a parameter in the predator prey equations.
50 % 0 < ALPHA.
51 %
52 % Input, real BETA, a parameter in the predator prey equations.
53 % 0 < BETA.
54 %
55 % Input, real GAMMA, a parameter in the predator prey equations.

```

```

56 %      0 < GAMMA.
57 %
58 %      Input, real DELTA, a parameter in the predator prey equations.
59 %      0 < DELTA.
60 %
61 %      Input, real T, the maximum time.
62 %      0 < T.
63 %
64 %      Input, real DELT, the time step to use in integrating from 0 to T.
65 %      0 < DELT.
66 %
67 %      Input, string U0F or function pointer @U0F, a function for the initial
68 %      condition of U(X,Y).
69 %
70 %      Input, string V0F or function pointer @V0F, a function for the initial
71 %      condition of V(X,Y).
72 %
73 %      Input, real K1, the coefficient for the Robin boundary condition
74 %      to be applied to U:  $dU/dn = k1 * U$ .
75 %
76 %      Input, real K2, the coefficient for the Robin boundary condition
77 %      to be applied to V:  $dV/dn = k2 * V$ .
