1 function fe2d_nr_fast ( alpha, beta, gamma, delta, T, delt, u0f, v0f, ...
2   k1, k2, g2uf, g2vf )
3 %*****80
4 %
5 %% FE2D_NR_FAST applies Scheme 2 with Kinetics 1 to predator prey in a region.
6 %
7 % Discussion:
8 %
9 %   FE2D_NR_FAST is a "fast" version of FE2D_NR.
10 %
11 %   FE2D_NR is a finite element Matlab code for Scheme 2 applied
12 %   to the predator-prey system with Kinetics 1 solved over a region
13 %   which has been triangulated. The geometry and grid are read from
14 %   user-supplied files 't_triang.dat' and 'p_coord.dat' respectively.
15 %   as are the list of nodes on which Robin and Neumann boundary
16 %   conditions are to be imposed (from 'bn1_nodes.dat' and 'bn2_nodes.dat'
17 %   respectively).
18 %
19 %   This function has 12 input parameters. All, some, or none of them may
20 %   be supplied as command line arguments or as functional parameters.
21 %   Parameters not supplied through the argument list will be prompted for.
22 %
23 %   The parameters ALPHA, BETA, GAMMA and DELTA appear in the predator-prey
24 %   equations as follows:
25 %
26 %   dUdT =      nabla U +      U*V/(U+ALPHA) + U*(1-U)
27 %   dVdT = delta * nabla V + BETA*U*V/(U+ALPHA) - GAMMA * V

48 %
49 % Parameters:
50 %
51 % Input, real ALPHA, a parameter in the predator prey equations.
52 % 0 < ALPHA.
53 %
54 % Input, real BETA, a parameter in the predator prey equations.
55 % 0 < BETA.

```

```

56 %
57 %      Input, real GAMMA, a parameter in the predator prey equations.
58 %      0 < GAMMA.
59 %
60 %      Input, real DELTA, a parameter in the predator prey equations.
61 %      0 < DELTA.
62 %
63 %      Input, real T, the maximum time.
64 %      0 < T.
65 %
66 %      Input, real DELT, the time step to use in integrating from 0 to T.
67 %      0 < DELT.
68 %
69 %      Input, string U0F or function pointer @U0F, a function for the initial
70 %      condition of U(X,Y).
71 %
72 %      Input, string V0F or function pointer @V0F, a function for the initial
73 %      condition of V(X,Y).
74 %
75 %      Input, real K1, the coefficient for the Robin boundary condition
76 %      to be applied to U: dU/dn = k1 * U.
77 %
78 %      Input, real K2, the coefficient for the Robin boundary condition
79 %      to be applied to V: dV/dn = k2 * V.
80 %
81 %      Input, string G2UF or function pointer @G2UF, a function for the Neumann
82 %      boundary condition of U(X,Y,T).
83 %
84 %      Input, string G2VF or function pointer @G2VF, a function for the Neumann
85 %      boundary condition of V(X,Y,T).
