

Euphresco was initiated as a network of research programme owners and programme managers funded under the 6th and 7th EU framework programme from 2006 to 2014.

Euphresco became a sustainable network in April 2014 and the network secretariat is hosted by the European and Mediterranean Plant Protection Organization.

Research funding under Euphresco

Euphresco's main objective is to coordinate national programmes on phytosanitary research. The liaison with other national, European and international initiatives ensures a coherent strategy for setting priorities and avoiding overlaps among projects funded under different mechanisms. So far nine calls have been organised and more than 100 research projects have been funded.

Euphresco organises a round of calls to fund research projects every year and information on the timing and procedures can be found on the website: www.euphresco.net

Harmonized protocol for monitoring and detection of *Xylella fastidiosa* in its host plants and its vectors (2016-2018).

The application of Next-Generation Sequencing technology for the detection and diagnosis of non-culturable organisms: viruses and viroids (2016-2018).

The application of remote sensing in Plant Health (2017-2018).

Systems for awareness, early detection and notification of organisms harmful to plants (2020-2022).

Phytosanitary risks of newly introduced crops (2020-2022).

Using high-throughput sequencing to gain insights from virus collections and strengthening the infrastructure of plant virus collections (2020-2022).

Early detection of *Phytophthora* in EU and third country nurseries and traded plants (2020-2022).

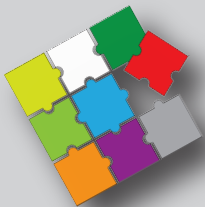

Preparedness in biological control of priority biosecurity threats (2021-2023).

Detailed information on all the projects funded through Euphresco can be found on the website, section research projects: www.euphresco.net

The Euphresco network and you

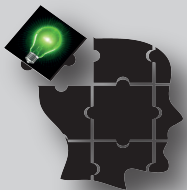

Euphresco network is interested in establishing links with organisations from all over the world whose mission is to define, fund or manage research programmes in the phytosanitary area. Such organisations are:

- programme owners: ministries and regional authorities defining research programmes
- programme managers: research funding agencies managing research programmes.

If you work for such an organisation and you are interested in joining the network, contact Euphresco!

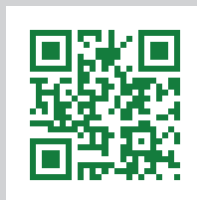

Euphresco is also interested in collecting information on phytosanitary research projects in order to map the scientific panorama of the international research area.

If you know about phytosanitary research projects, or if you have expertise in the domain, please contact Euphresco.
