

“ Three pillars underpinning data population and enrichment in the marketplace’s content: (1) automatic ingestion and updating of data sources from third parties; (2) continuous curation of the information by the marketplace’s editorial team and (3) contributions from its users, the SSH community. ”

SSH Open Marketplace in Focus

- SSH Open Marketplace Curation Strategy:** Relies on harvesting from third parties while emphasising community-curation by its users, our valued SSH researchers and scholars.
- Free and Open:** The SSH Open Marketplace advocates open science and open access and so the information in the marketplace is freely accessible. It is not a place for buying and selling something.
- A social infrastructure:** The emphasis on community-based curation makes the SSH Open Marketplace a social infrastructure. Its usage relies on the SSH community to refine, update and correct information on the marketplace as an information brokering service with CLARIN and DARIAH experiences playing a key role.
- Role of LIBER:** A community of practitioners and specialists with expertise on two key aspects of the SSH Open Marketplace: community involvement for curation and experience in collecting/structuring/exposing information.

Send us your feedback and advice on our community-driven curation so we can take inspiration from your experiences in harvesting and harmonizing massive ingestions of data.

SSH Open Marketplace Added Value Features

- Value Proposition:** The unique value of the SSH Open Marketplace as a discovery portal of Tools and Services is its connection to relevant Training Materials, Publications, Datasets, and Workflows. The SSH Open Marketplace is much more than just another catalogue by bringing a discovery portal straight to the SSH community. Like a library, it acts as a repository for Tools and Services with enriched metadata and making it so much easier to connect people with the resources they need.
- Designed for:** The SSH communities of the European Open Science Cloud (EOSC), spanning students, scholars, junior and senior researchers, as well as resource providers enabling them to highlight their work.
- Connected communities:** The SSH Open Marketplace is embedded within the existing communities of DARIAH, CLARIN, and CESSDA. It cooperates closely with them, while benefiting from the support of other partners like LIBER.

Social Sciences & Humanities Open Marketplace

Discover new resources for your research in Social Sciences & Humanities: tools, services, training materials and datasets, contextualised. SSH Open Marketplace is under development and the current content is subject to change. **ALPHA RELEASE IS PLANNED FOR JANUARY 2021.**

All Categories

Community-driven curation approach:

- Final release - User-centric Approach is key to success:** User contributions, feedback and comments reflect real research practices with a strong emphasis on content and contextualisation.
 - Low threshold community feedback: corrections, additions and suggestions for new records.
 - User-friendly contributor forms for curating individual records, submitting new relations, flagging outdated or wrong records.
 - Accelerating service uptake in the community through interactions on how best to create a sense of ownership among researchers and the role disciplinary associations can play.

From a LIBER perspective, what else can be improved for service usage and ownership? Share your views with SSHOC.
