

A thematic marketplace: **The SSH Open Marketplace**

Franciska de Jong

executive director CLARIN ERIC

f.m.g.dejong@uu.nl

3rd ESFRI RIs -EOSC Workshop, 26 January 2022

- SSH = Social Sciences and Humanities, *aka*
SCI = Social and Cultural Innovation (ESFRI-specific jargon)

- How can the thematic services of  add value to the Research Infrastructure community?

-  - a thematic service discovery platform rooted in disciplinary communities, compatible with existing scholarly commons and aligned with international standards

The role of thematic marketplaces in the EOSC ecosystem

- Stimulating user engagement (*Zoe Cournia*)
- Community-driven guidance for generating metadata (*Anne Fouilloux*)
- Contextualisation through rich curation of data, workflows, scenarios
- Recommendation functionality as part of discovery workflows
- Fit for integration in RI reward framework, leveraged visibility of resources
- Comfort zone for individual researchers: link with peers, disciplinary traditions
- Starting point for cross-domain or cross-cluster research projects
- EOSC Platform not much appreciated (yet) (attractive for 20%)
- Provides room for building the ground work first without losing the link with contexts of use.

SSHOC: a cluster project contributing to the maturing of EOSC and the visibility of thematic services

- Working towards common data and thematic service protocols that will serve the interoperability between the disciplines involved, and thereby strengthen the support for 500.000 million SSH researchers (academic and non-academic) and the data science industry.
- Focussing on cluster-specific data types in trusted, certified, FAIR repositories (>100). Examples:
 - Cultural heritage content (*museums, archives, libraries,*)
 - Language resources (*newspapers, literary text, political pamphlets, ...*)
 - Social survey data (*income, wellbeing, health, ...*)
 - ...
- Providing room for generalising thematic services more effectively than via direct focus on EOSC as a discovery platform.

SSHOC: a cluster project contributing to the maturing of EOSC and the visibility of thematic services

- Working towards common data and thematic service protocols that will serve the interoperability between the disciplines involved, and thereby strengthen the support for 500.000 million SSH researchers (academic and non-academic) and the data science industry.
- Focussing on cluster-specific data types in trusted, certified, FAIR repositories (>100). Examples:
 - Cultural heritage content (*museums, archives, libraries, ...*)
 - Language resources (*newspapers, literary text, ...*)
 - Social survey data (*income, wellbeing, health, ...*)
 - ...
- Providing room for generalising thematic services more effectively than via direct focus on EOSC as a discovery platform.

Support for EOSC as Cloud of Clouds, System of Systems, Marketplace of Marketplaces

a distributed infrastructure, with shareable resources, optimized access for researchers and cost-efficient service offer based on federation and collaboration.

EOSC Support Activities

- Training and education
- Engagement and promotion
- Business collaboration & the Digital Innovation Hub

EOSC Core

Core platform

Helpdesk	SMS	Monitoring & accounting	AAI
Configuration Management	Portal	Marketplace/Order Management	Validation/usage stats of sources
Service PIDs	Service Catalogue	Resources/Res. Prods Catalogue	Open Science Monitor

Core coordination

Rules of Participation	Security Coordination	PID Policy
Onboarding	Knowledge base	Procurement

EOSC Exchange

Horizontal execution layer

Horizontal services from wider community
Expanded horizontal services from clusters
07 horizontal services
e-infra horizontal services

Community A	Cluster B	Community C	Regional D
Thematic resources	Thematic resources	Thematic resources	Regional resources
Thematic execution layer	Thematic execution layer	Thematic execution layer	Regional execution layer
Thematic portal	Thematic portal	Thematic portal	Regional portal
Thematic service	Thematic service	Thematic service	Regional service
Thematic research products	Thematic research products	Thematic research products	Regional research products

EOSC Interoperability Framework

Resource Description Framework	Open Science Policy Framework	AAI framework
Service Management Framework	PID	Open Metrics Framework
Procurement Framework	Data access Framework Framework

Critical first steps towards success for EOSC 1/2

The main focus and value of the MVE is to connect disciplinary infrastructures and research data to enhance disciplinary, cross-disciplinary and transnational research, leading to new scientific discoveries and new insights for society. Hence, **the federation of research data infrastructures *via* the thematic clustering of Research Infrastructures, e-Infrastructures and regional projects is seen as a critical first step to promote early successes for EOSC**, and as an enabler to help address society's current and future global challenges.

*Solutions for a Sustainable EOSC; A FAIR Lady (olim Iron Lady)
report from the EOSC Sustainability Working Group (2020)*

Critical first steps towards success for EOSC 2/2

... resources and **thematic services** identified as ready for integration by the Research Infrastructure clusters should be prioritised for on-boarding because they **represent high-quality resources valued by research communities** and the **Research Infrastructures** have demonstrated their eagerness to contribute to EOSC and **have already established communication channels**, and **at cluster-level best practices are being developed to ensure the interoperability of federated services and data** ...

Corpus Analysis with Antconc

Activities: Analyzing, Content Analysis, Interpreting, Contextualizing
Keywords: distant-reading, recommended

Corpus analysis is a form of text analysis which allows you to make comparisons between textual objects at a large scale (so-called 'distant reading'). You will learn to do "Keyword-in-context" searching, identify patterns surrounding a particular word, look at statistically...

Exploring and Analyzing Network Data with Python

Activities: Analyzing, Network Analysis
Keywords: recommended

This lesson introduces network metrics and how to draw conclusions from them when working with humanities data. You will learn how to use the NetworkX Python package to produce and work with these network statistics.
