Learning outcomes

By the end of this exercise, you will know how to:

- 1) Install Mono framework for Mac
- 2) Install gcc, cbc, and glpsol
- 3) Install clicSANDMac

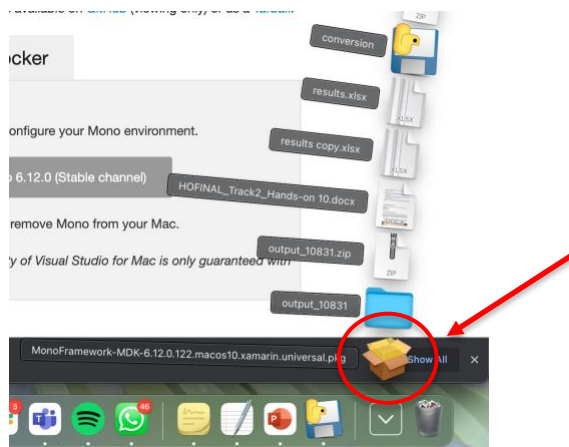

Install Mono framework for Mac

Download Mono with this [website](#).

This is the page you will see when clicking on the above link. Click on 'Download Mono 6.12.0 (Visual Studio channel*)' to start the download.

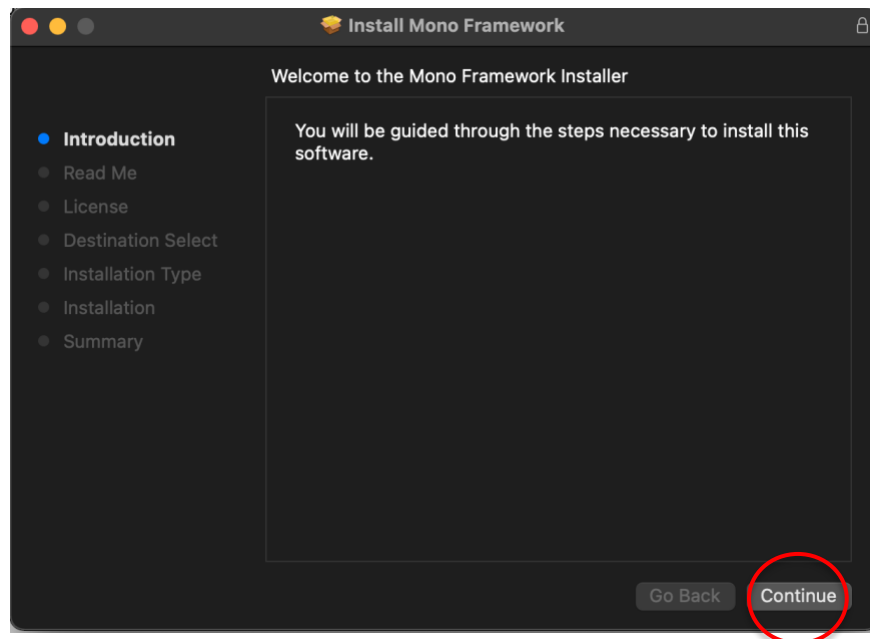

The screenshot shows the Mono website's download page for macOS. The navigation bar includes 'Home', 'Download', 'Documentation', 'News', and 'Community'. The main heading is 'Download', with release channels: 'Nightly - Preview - Stable - Visual Studio'. The latest stable release is '6.12.0 Stable (6.12.0.122)'. There are two download buttons: 'Download Mono 6.12.0 (Visual Studio channel*)' (highlighted in blue) and 'Download Mono 6.12.0 (Stable channel)'. Below the buttons, it states 'Supported on macOS 10.9 and later' and provides a link to 'uninstall instructions'. A note at the bottom recommends the Visual Studio channel for users of Visual Studio for Mac.

Once downloaded, the Mono package will be in your Downloads folder. This may be easily accessible from the lower right corner of your screen. Click on it.

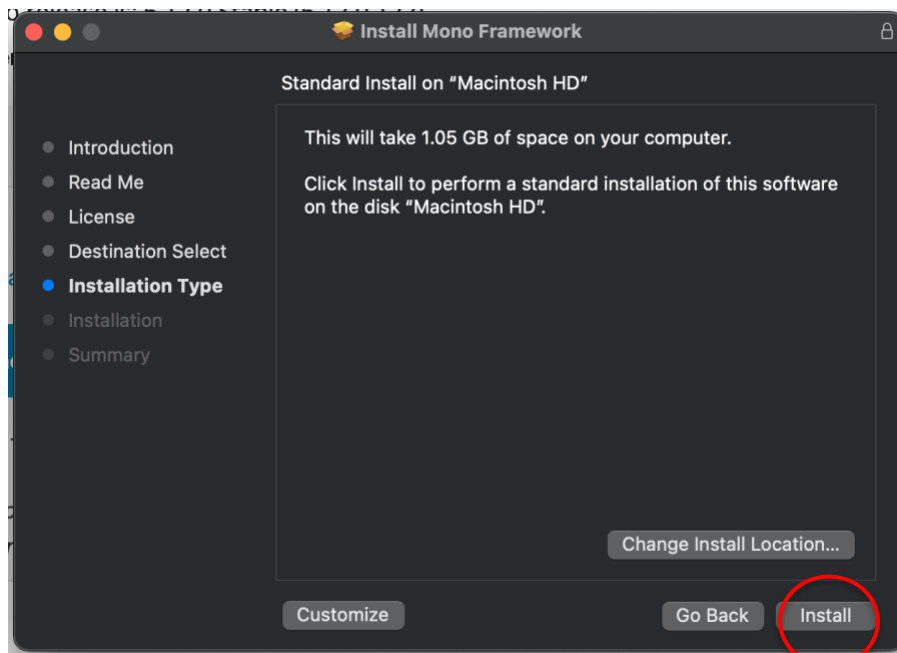

A pop-up screen will appear, welcoming you to the Mono Framework Installer.

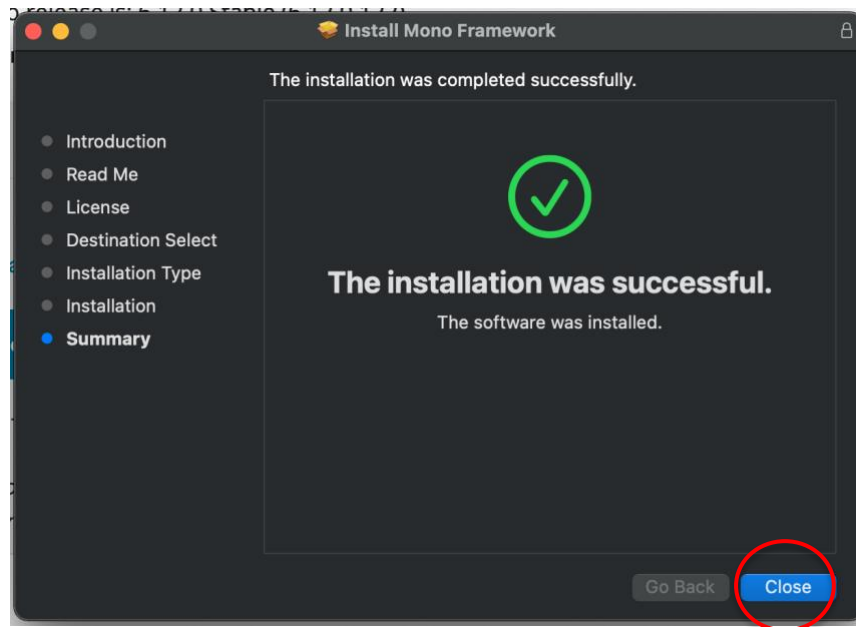

Click on 'Continue' and 'Agree' in the lower right corner of the pop-up screen for the next few pages, until you see the screen below. Click 'Install'.

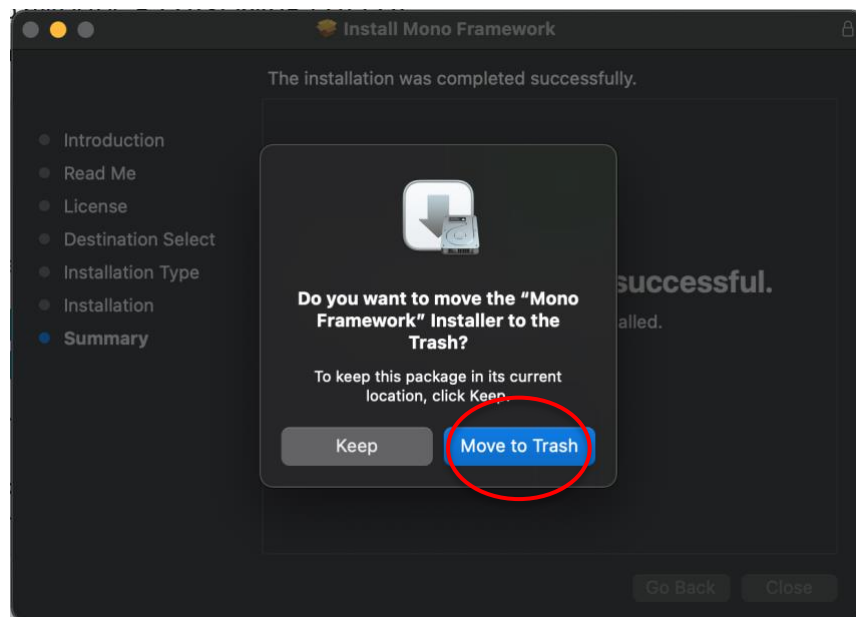

Once the installation is complete, you will see the screen below. Click on 'Close'.

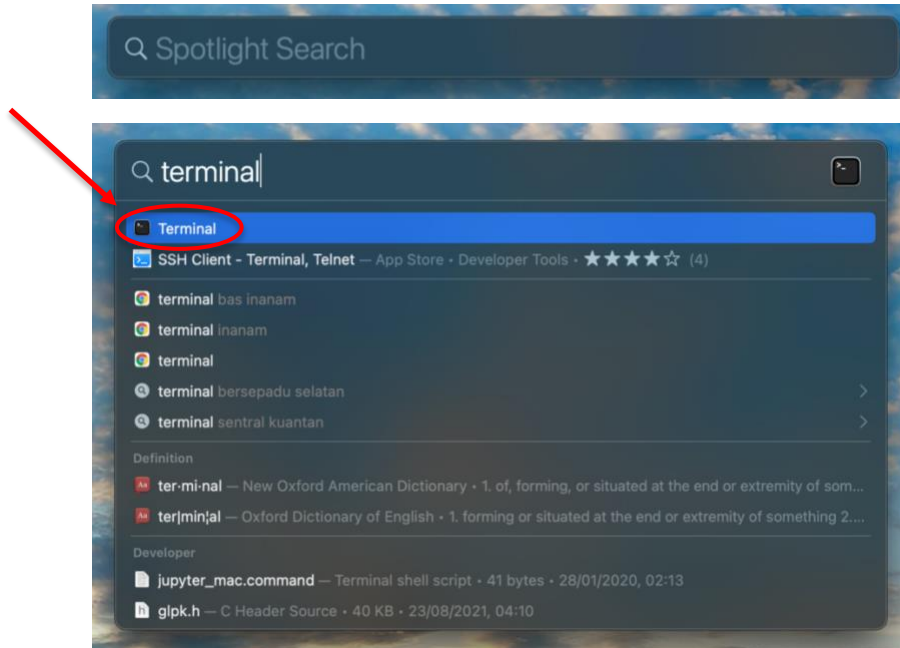

Click on 'Move to Trash' to finish.

Install gcc, cbc, and glpsol

To install gcc, you need to run a command in a terminal. Click on **command** (⌘) + **space bar** to activate spotlight search. In here, type in “terminal” and click or press enter on the first option.

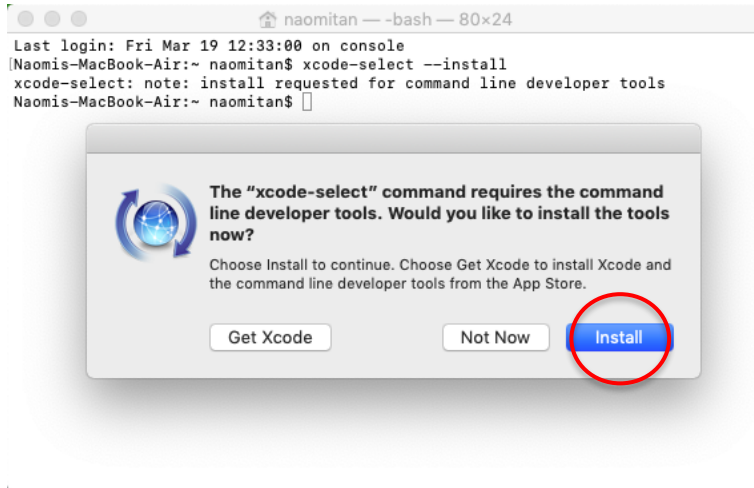

A pop-up screen will appear. This is the terminal.

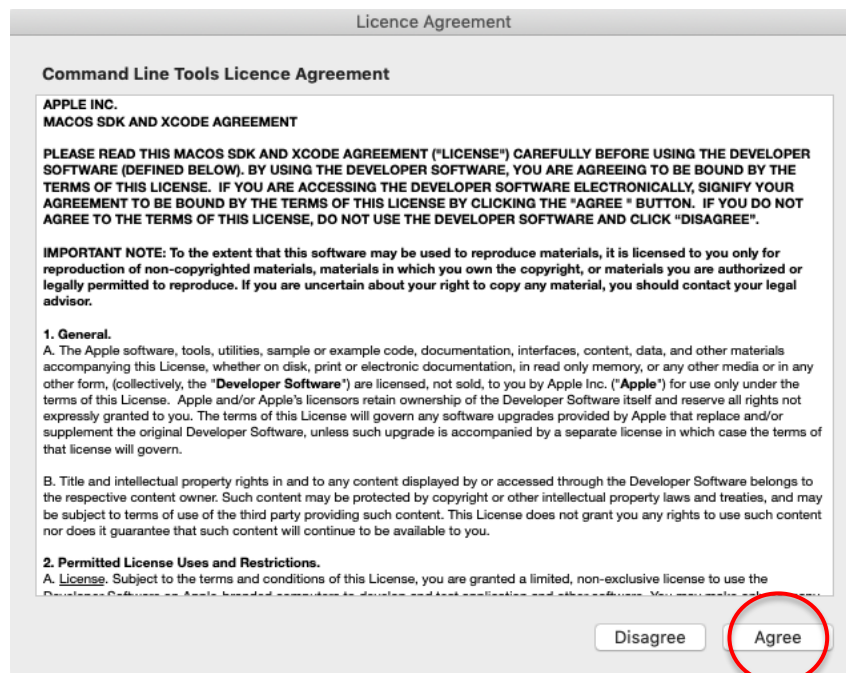

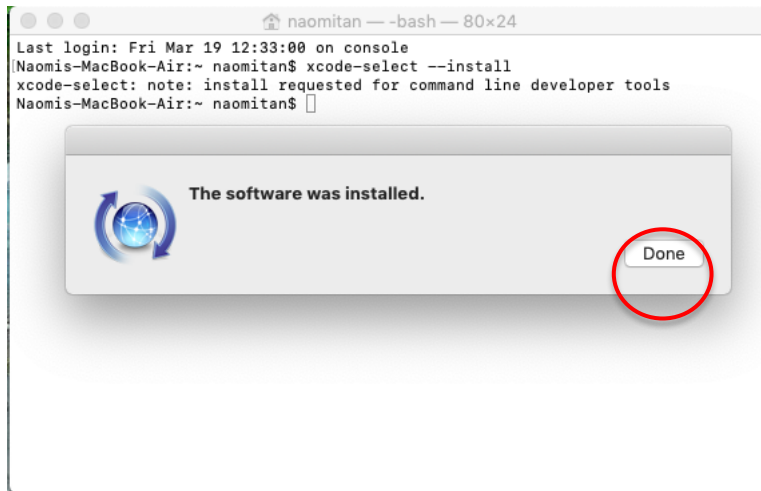

Copy and paste this command in the terminal: **xcode-select --install** and hit enter. This will start the installation. You will see the pop-up screen below. Click on 'Install'.

Click on 'Agree'.

You will see the below pop-up stating installation is complete. Click on 'Done'.

To install cbc and glpsol, copy and paste the commands from [install.sh](#) to your terminal in one go. Press enter. Your screen should look like the screenshot below.

```

Downloads — curl -# https://ftp.gnu.org/gnu/glpk/glpk-5.0.tar.gz -O — 80...
Last login: Fri Jan 14 13:07:33 on console

The default interactive shell is now zsh.
To update your account to use zsh, please run `chsh -s /bin/zsh`.
For more details, please visit https://support.apple.com/kb/HT208050.

```

The script needs curl and unzip to be installed, which should already be installed by default. clicSANDMac currently expects these to be installed in /usr/local/bin

Install clicSANDMac

Download the latest clicSANDMac.zip from this [website](#).

You will see clicSANDMac.zip in your Downloads folder. Unzip the file (by clicking on clicSANDMac.zip).

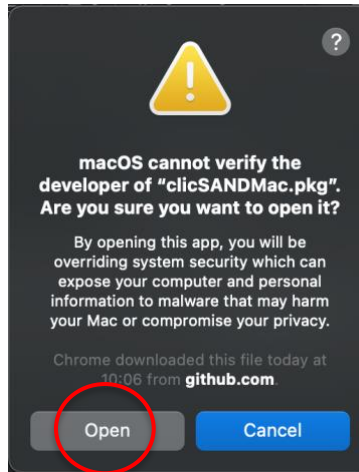

After unzipping, right click on clicSANDMac.pkg and click on 'Open' to launch the installer.

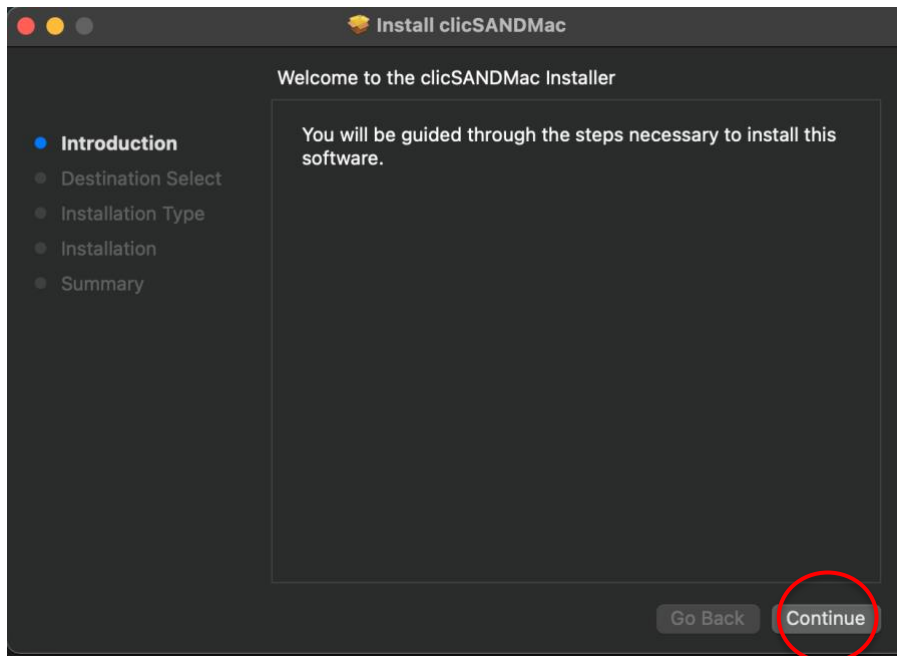

A pop-up screen will appear stating macOS cannot verify the developer of clicSANDMac.pkg. Click 'Open'.

Click 'Continue' on the installer welcome screen. Click Install. You will be prompted for your password. The download will start.

A window will pop-up saying that the installation was successful. Click 'Close', and then 'Move to Trash' to finish.

clicSANDMac will be in your 'Applications' folder now!
