Agenda

1. What did we do with clinical trials?
2. What does this bring to our Wiki?
3. Background on Wiki + medicine
4. How did we do this?
5. What next?

We imported ClinicalTrials.gov to Wikidata and curated it wiki style

Statistics

356,831 - Number of clinical trials
356,536 - Links to ClinicalTrials.gov
177,420 - Number of clinical trial phases links

FAIR and open multilingual clinical trials in Wikidata and Wikipedia

Lane Rasberry, Daniel Mietchen

Abstract

This project seeks to conduct language translation on metadata labels for research publications, attribution data, and clinical trials information to make data about medical research queriable in underserved languages through Wikidata and the Linked Open Web. This project has the benefit of distributing content through Wikipedia and Wikidata, which already have an annual userbase of a billion users and which already have established actionable standards to practice diversity, inclusion, openness, FAIRness, and transparency about program development. The impact will be localized access to basic research information in various Global South languages to integrate with existing community efforts for establishing the same. Although Wikidata development in this direction seems inevitable, the cultural and social exchange required to establish global multilingual research partnerships could begin now with support rather than later as a

Trust

What next?
Curation for communities

Next steps

Probably curation by university

1. import all researchers
2. disambiguate all research sites
3. showcase of research
4. connect with grant databases
5. match papers published

Next steps

More consideration
of FAIR and open data
in Wikidata and in general
