Description: This review corresponds to the IPBES Values Assessment Chapter 5. This report highlights _how_ values can be changed and mobilised as part of efforts to direct and govern progress towards preferred futures. This review provides information to Section 5.3 in Chapter 5, the guiding questions for this section are: how can plural values of nature contribute to transformations towards just and sustainable futures?, what constrains and enables the mobilisation of plural values of nature for transformations to sustainability? And, how can we govern the mobilisation of plural values of nature for transformations to sustainability?
