

id	data field	options	description
	paper metadata		
Q1	assessor or reviewer name	HG / AS / Safial / Shafayet	reviewer name as code
Q2	journal name	free text	e.g. PNAS. Leave empty if uploaded to arXiv only
Q3	article DOI	free text (DOI)	if given, empty otherwise
Q4	full paper citation	free text	follow preferred citation
R1	authors	free text (comma separated)	
R2	date of publication	free text (German date format)	
R3	date of submission	free text (German date format)	
R4	access restriction	open access / paid subscription	
R5	CRC projects	A01, A02, A03, A04, A05, A06, B02, B03, B04, B05, B06, B08, Z03, Associated	e.g., A01. If there are multiple options, follow the choice the authors made in the internal archive
R6	CRC funding declared	yes / no	
R7	CRC archiving entry exists	yes / no	check archive at https://wiki.sfb1294. uni-potsdam.de/xmlui/
R8	CRC preprint platform	free text	check archive at https://wiki.sfb1294. uni-potsdam.de/xmlui/

R9	data and code usage	no / illustration (e.g., Gaussian curve) / complex	“illustration” is meant for simple illustrative examples that don’t carry hard data. Don’t attempt to reproduce results if “no” or “illustration” (Q10)
Q5	how accessible to users	some or all applicable / not specified where / not applicable	“some or all applicable” indicates that the publication relies on digital artifacts and a data availability statement is available; “not specified where” indicates that a publication relies on digital artifacts but no data availability statement indicates where to find them. “Not applicable” indicates theory or review papers.
R10	how accessible to users	reused / created / re-implemented (check boxes)	if mentioned anywhere

R11	data collection	reused / collected (check boxes)	if mentioned anywhere
Q6	where available	some or all online / third party request / author request / only in article figures or tables or text (check boxes)	“Third party request” means having to contact a nonauthor and not receiving data, “author request” means having to contact an author and not receiving data. If digital artifacts are available (including via author request), then “some or all online.” If code fragments are written in the publication but are not available elsewhere, then data is only “in article.” Availability must be mentioned explicitly, if no explicit mention (e.g., “request data from first author”) has been made, do not contact author
R12	available resource name	free text	e.g., Zenodo or GitHub
R13	author request date	free text (German date format)	date the artifacts were requested from author or third party (if necessary, only contact if something was described as “on request”)
R14	author response date	free text (German date format)	date the author responded to request. If necessary, only, wait one week maximum. If the response doesn’t arrive within one week, act as if no response was given
R15	author response type	artifacts / no artifacts
