

Views Controlled Vocabularies (VCV) Task Group
Zoom meeting
2020-05-27 15:00 UTC

Attending: Steve Baskauf, Matthew Nielsen, John Oswald

Regrets: Neil Cobb, Randy Singer, Jorrit Poelen, Katja Seltsmann

Meeting notes:

Notes added during the meeting and from the chat are in red.

- I. Question from Matt at last call: Can subjectPart be a list of entries from our vocabulary, or does it need to have a single value? See Issue 164
<https://github.com/tdwg/ac/issues/164>
- II. Summary documents from John Oswald in the shared Google Drive folder
 - A. Counts by part and orientation (from dropdowns he showed us last time)
 - B. Composite part names and component elements from part names
 - C. Standardized viewing angle diagrams for bilaterally symmetric organisms.
- III. Course of action from here? **Because of low attendance, we did not really discuss a course of action. We spent some time talking with John about the purpose and goals of the group and he talked about more details related to the structure of his database.**
- IV. Next meeting time: **Not decided.**
