

High-Performance Computing as a means to support the Digital Twin: the LUMI Supercomputer

The Biodiversity Digital Twin webinar 13 Jul 2022

Aleksi Kallio

BioDT Digital Twin Technical Platform Leader and Development Manager at CSC

Funded by
the European Union

🔥 WP3 - Digital Twin Advanced Technical Platform

🔥 *“Set up, develop and operate the advanced technical platform required by the digital twins; provide world-class HPC resources from the LUMI EuroHPC computing facility; ensure portability of digital twins across HPC sites and cloud environments; maintain service catalogue of shared services for integration with EOSC Core services.”*

🔥 Digital twins require platforms for **computational simulation**

🔥 Detailed and realistic simulations require large amounts of computing time

🔥 You cannot just throw in more computers to speed up complex computing

🔥 Container technology has improved portability of scientific software code

High-performance computing

Complexity of simulation

LUMI supercomputer

LUMI is a Tier-0 GPU-accelerated supercomputer that enables the convergence of **high-performance computing, artificial intelligence, and high-performance data analytics.**

Tier-0 GPU partition:
over **550** Pflop/s
powered by AMD Radeon Instinct™ MI250X GPUs

Interactive partition with
32 TB of memory and
graphics GPUs for data
analytics and visualization.

7 PB Flash-based storage
layer with extreme I/O
bandwidth of 2 TB/s and
IOPS capability.

80 PB parallel file system

Supplementary CPU partition
~200,000
AMD EPYC CPU cores

Possibility for combining
different resources within
a single run. HPE Slingshot
technology.

30 PB encrypted object storage
(Ceph) for storing, sharing and
staging data.

LUMI-C:

Storage

LUMI-P:
Lustre
Storage

High-speed
interconnect

LUMI-K:
Container
Cloud Service

LUMI-Q:
Emerging
Tech

LUMI-O:
Object
Storage
Service

- ✦ We set up, develop and operate technical platform for digital twins
- ✦ Support adoption of digital twins from HPC to cloud and, to a certain extent, personal computers
- ✦ Building collaboration with Destination Earth initiative on digital twin runtime environments (engine)
- ✦ The computing environment will be tightly connected to data layer (WP5)
- ✦ Currently working on collecting platform requirements from use cases and computational modellers
