

Award #: 2004302, Collaborative Research: Frameworks: Ghub as a community-driven data-model framework for ice-sheet science

## Data

Hosted ice sheet and paleoglaciology data derived from multiple sources.

## Tools

Computational tools and hosted codes help with data analysis and visualization.

## Education

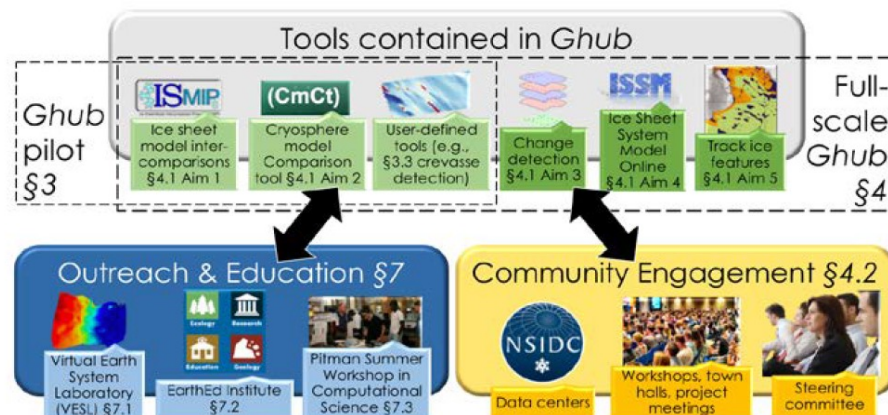

GHUB's visualizations and high-performance computing support teaching and outreach.

## Some Lessons

- Identify and obtain good User input from one or more focused science groups – ISMIP6 provide Ghub many useful lessons and early focus.
- Steering committee with users and partner representatives.
- Plan for staff turnover with shared responsibilities.

## What is Ghub?

### Ghub project-scale workflow

Many datasets and tools made available already for sharing and online execution – Jupyter notebooks for data analysis etc.

#### University at Buffalo

- Jason Briner (domain, ice sheet history)
- Bea Csatho (domain, ice sheet observation)
- Sophie Nowicki (domain, ice sheet modeling and synthesis)
- Kristin Poinar (domain, ice sheet hydrology)
- Toni Schenk (domain, ice sheet observation)

#### Tufts University

- Abani Patra (cyberinfrastructure, Vhub)
- NCAR
- Bill Lipscomb (domain, ice sheet modeling)

#### Innovim

- Erika Simon (programmer, "NASA" modeling tools)
- Tidbit Software
- Justin Quinn (programmer, viz and web-based modeling)

#### (VESL), with:

#### NASA-JPL

- Eric Larour (cryo head, ISSM)

#### NCAR

- Kate Thayer-Calder (programmer, ice sheet models in GCM)
