M. Beckman, S. Guerrier, J. Lee, R. Molinari, S. Orso, I. Rudnyskiy, Eds., in *An Introduction to Statistical Programming Methods with R* (2020).

# What is Git?

- **Version Control System (VCS)**- tracks changes to files over time (e.g. scripts, simple csvs, small fastas, etc.)
- Enables restoration of old versions, modifications to previous changes, tracking contributions by multiple people, etc.
- Primarily of text files, but can also do other types

# What is GitHub?

- Remote hosting service for version-controlled repositories
  - Field standard approach for sharing data, code, etc.
  - User-friendly GUI
- Similar open-source alternative: GitLab

# Why use Git(Hub)

1. Keep a (deep) backup of your work
2. Revert to an old version/ modify previous changes
3. Allow multiple contributors to work simultaneously
4. Test new code before updating public version
5. Share your data, code, and results!

# SSH setup

How to never type a password again!

# SSH keys

- Replaces password with file containing a cryptographic ultra-secure password
- Very common for working with servers
- We will generate a public key (shared with github) and a private key (kept on your computer)
  - Behind the scenes: the public and private keys are compared to authenticate
- SSH key files can be reused (e.g. copied to a new laptop)

# Start your terminals!

Time for the practical portion

```
$ conda activate git-eager
```

# SSH key Setup

Make a new key with your email address:

```
$ ssh-keygen -t ed25519 -C "your_email@example.com"
```

Press enter (default file location)

```
$ ssh-keygen -t ed25519 -C "your_email@example.com"  
Generating public/private ed25519 key pair.  
Enter file in which to save the key  
(/home/ubuntu/.ssh/id_ed25519):
```

# SSH key Setup

Recommended to skip passphrase entry

```
$ ssh-keygen -t ed25519 -C "your_email@example.com"  
Generating public/private ed25519 key pair.  
Enter file in which to save the key  
(/home/ubuntu/.ssh/id_ed25519):  
Enter passphrase (empty for no passphrase):  
Enter same passphrase again:
```

# SSH key Setup

Should something like this:

```
The key fingerprint is:  
SHA256:hnc0R6hr4T/VH9acLod4L1xG/2MDJkwS+FmG84m/g2U megan_michel@eva.mpg.de  
The key's randomart image is:  
+--[ED25519 256]--+  
|  
| . . . .  
| . +.+  
| ..@ o  
| .o* * .  
| ..So* ...+  
| o+. E.o.*+  
| . .+.* B.o  
| .o+ * *o  
| .o *.o  
+-----[SHA256]-----+
```

# SSH key Setup

Check for `id_ed25519*` and `id_ed25519*.pub` files

```
$ cd ~/.ssh/  
$ ls id*
```

# SSH key Setup

1. Check ssh program is running

```
$ eval "$(ssh-agent -s)"  
Agent pid 59566
```

2. Give SSH your key to record

```
$ ssh-add ~/.ssh/id_ed25519  
Identity added: /home/ubuntu/.ssh/id_ed25519 (megan_michel@eva.mpg.de)
```

# SSH key Setup

## On Github:

1. Settings > SSH & GPG Keys > New SSH Key
2. Give a name of key (title: “spaam-summer-school”)
3. Paste PUBLIC key

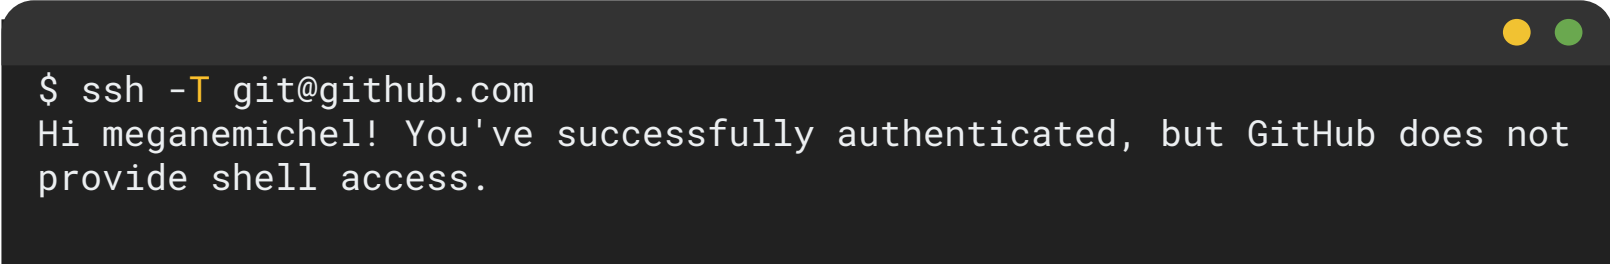

```
$ cat ~/.ssh/id_ed25519.pub # manually copy paste
```

4. Press Add SSH key

# SSH key Setup

Check that it worked!

```
$ ssh -T git@github.com
Hi meganemichel! You've successfully authenticated, but GitHub does not
provide shell access.
```

 If you see an error message like this, say yes

```
The authenticity of host 'github.com (140.82.121.3)' can't be established.
ECDSA key fingerprint is SHA256:p2QAMXNIC1TJYWeI0ttrVc98/R1BUFWu3/LiyKgUfQM.
Are you sure you want to continue connecting (yes/no/[fingerprint])?
```

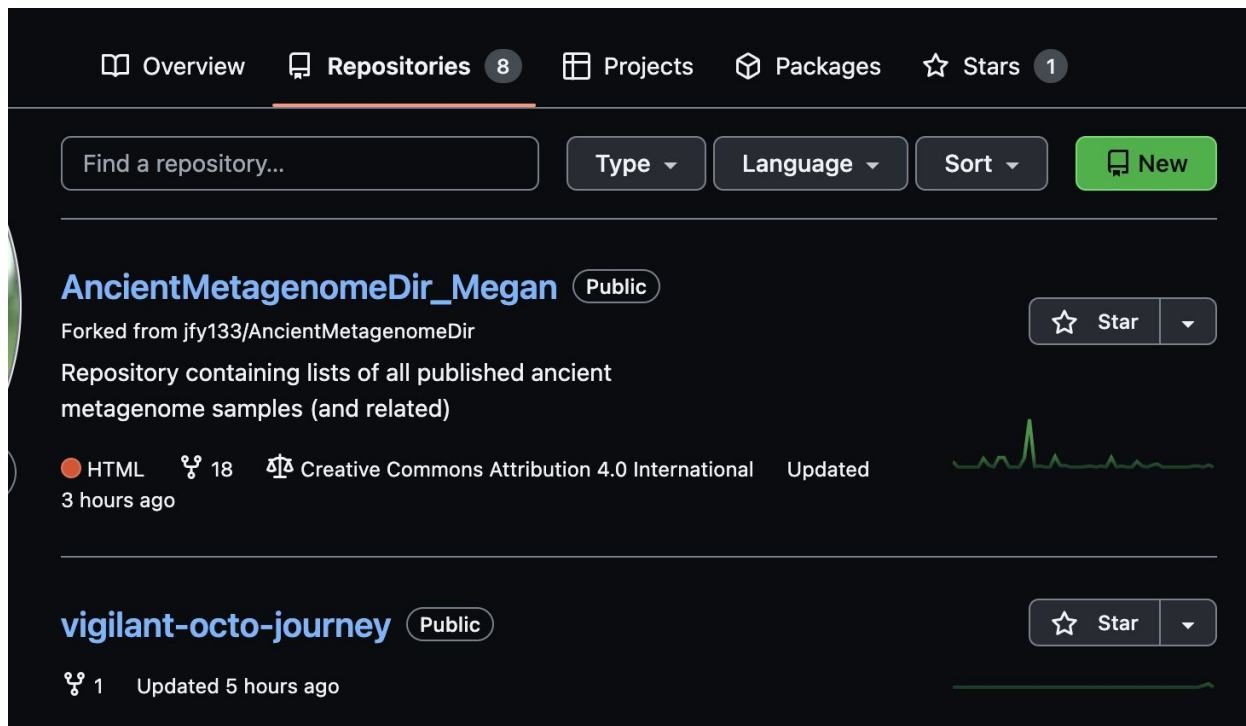

# The only 6 commands

you really need to know

# Make your own repository

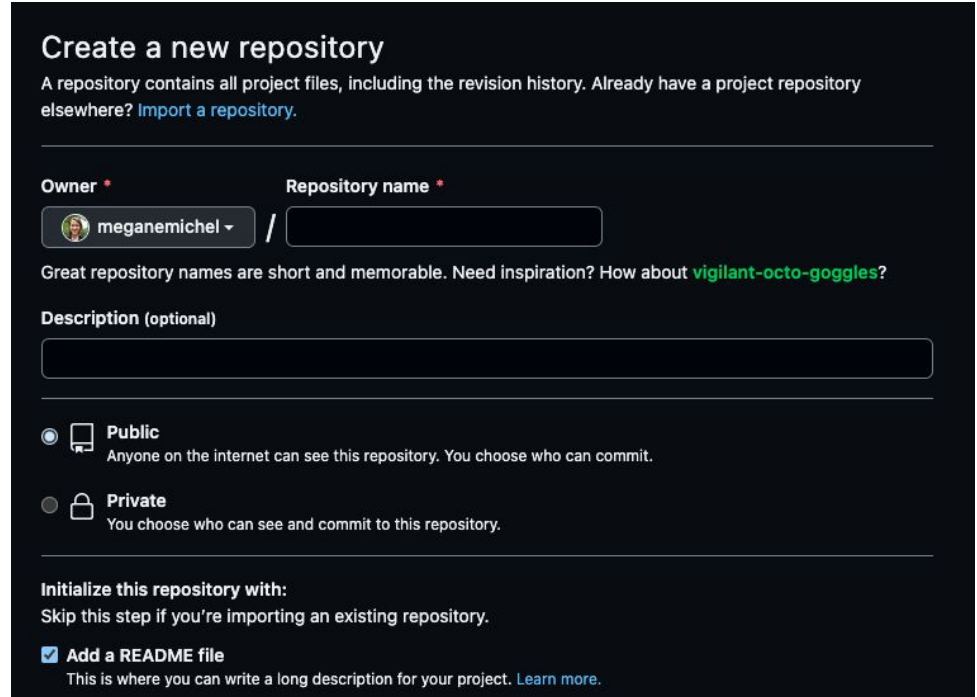

The screenshot shows the GitHub 'Repositories' page. At the top, there are navigation tabs for 'Overview', 'Repositories' (with a count of 8), 'Projects', 'Packages', and 'Stars' (with a count of 1). Below the navigation is a search bar labeled 'Find a repository...' and three filter buttons: 'Type', 'Language', and 'Sort'. A green 'New' button is on the right. The main content area displays a list of repositories. The first repository is 'AncientMetagenomeDir\_Megan', which is public and forked from 'jfy133/AncientMetagenomeDir'. Its description is 'Repository containing lists of all published ancient metagenome samples (and related)'. It has 18 forks and is licensed under 'Creative Commons Attribution 4.0 International'. It was updated 3 hours ago. The second repository is 'vigilant-octo-journey', also public, with 1 fork and updated 5 hours ago. A green line graph is visible on the right side of the repository list.

# Make your own repository

1. Name your repository
2. Select **Add a README file**
3. Choose **Create Repository**

 For the remainder of this section, replace ‘vigilant-octo-journey’ with the name of your new repo

**Create a new repository**

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

---

**Owner \*** **Repository name \***

 meganemichel /

Great repository names are short and memorable. Need inspiration? How about [vigilant-octo-goggles?](#)

**Description (optional)**

---

 **Public**  
Anyone on the internet can see this repository. You choose who can commit.

 **Private**  
You choose who can see and commit to this repository.

---

**Initialize this repository with:**  
Skip this step if you're importing an existing repository.

**Add a README file**  
This is where you can write a long description for your project. [Learn more.](#)

# Change directories

We will save our data in the following directory:

```
$ cd /vol/volume/2b-introduction-to-github/
```

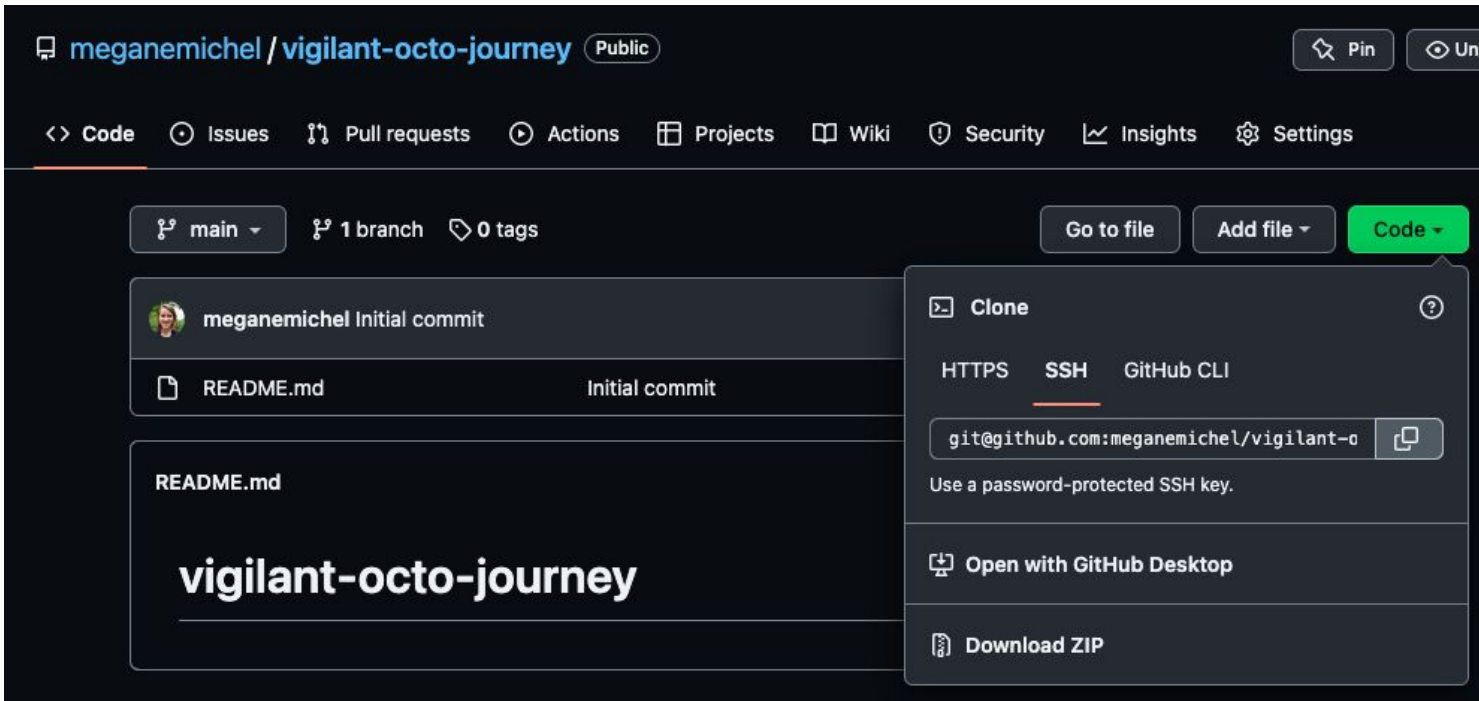

# git clone

# git clone

Clone a `remote` (online) repository to your `local` machine

The screenshot shows the GitHub interface for the repository `meganemichel/vigilant-octo-journey`. The repository is public and has a `main` branch with 1 branch and 0 tags. The `Code` button is highlighted in green, and its dropdown menu is open, showing options to clone the repository using `HTTPS`, `SSH`, or `GitHub CLI`. The `SSH` option is selected, and the URL `git@github.com:meganemichel/vigilant-o` is displayed in a text box. Below the text box, there is a note: "Use a password-protected SSH key." Other options in the dropdown menu include "Open with GitHub Desktop" and "Download ZIP".

# git clone

Clone a `remote` (online) repository to your `local` machine

```
$ git clone git@github.com:meganemichel/vigilant-octo-journey.git
Cloning into 'vigilant-octo-journey'...
remote: Enumerating objects: 3, done.
remote: Counting objects: 100% (3/3), done.
remote: Total 3 (delta 0), reused 0 (delta 0), pack-reused 0
Receiving objects: 100% (3/3), done.
```

# git add

# git add <file>

Add a new or modified file into a 'staging' area (ready to send to the repository) on your `local` machine

```
$ cd vigilant-octo-journey
$ echo "test_file" > file_A.txt
$ echo "Just an example repo" >> README.md
$ git add file_A.txt
```

# git status

# git status

Check what files are locally changed, staged, etc.

```
$ git status
On branch main
Your branch is up-to-date with 'origin/main'.

Changes to be committed:
  (use "git restore --staged <file>..." to unstage)
    new file:   file_A.txt

Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
    modified:   README.md
```

 Try to add the README.md as well and check the status again

# git commit

# git commit -m "<change\_description>"

Package or 'save' the changes into a single 'commit' with a message of the changes.

- Each commit has a unique 'hash' ID
- Will not change: stored 'forever' in git history

```
$ git commit -m "Add example file"
[main c58ac5f] Add example file
 2 files changed, 2 insertions(+)
 create mode 100644 file_A.txt
```

 You may see a warning that your name and email were configured automatically. You can safely ignore that for now.

# git push

# git push

Push (upload) your `local` commit to the `remote` (online) repository

```
$ git push
Enumerating objects: 4, done.
Counting objects: 100% (4/4), done.
Delta compression using up to 14 threads
Compressing objects: 100% (2/2), done.

# git switch

# git switch

## Making a new branch on GitHub

# git switch

To make a new branch on command line

```
$ git switch -c new-feature  
Switched to a new branch 'new-feature'
```

*(Old command: git checkout -b)*

# git switch

Go back to the `main` branch

```
$ git switch main  
Switched to branch 'main'  
Your branch is up to date with 'origin/main'.
```

# git switch

 Commit changes to save to branch!

```
$ git switch new-feature
$ echo "What is a vigilant-octo-journey anyway?" >> README.md
$ git status
On branch new-feature
Changes not staged for commit:
  (use "git add <file>..." to update what will be committed)
  (use "git restore <file>..." to discard changes in working directory)
    modified:   README.md

no changes added to commit (use "git add" and/or "git commit -a")
$ git switch main
M   README.md
Switched to branch 'main'
Your branch is up to date with 'origin/main'.
```

# git add/commit/push

```
$ git switch new_feature  
$ git add README.md  
$ git commit -m "Update README"  
$ git push
```

 If branch created on CLI

```
$ git push --set-upstream origin new-feature
```

To also push the new-feature branch on GitHub (first time only)

# Code peer review

# Pull Request

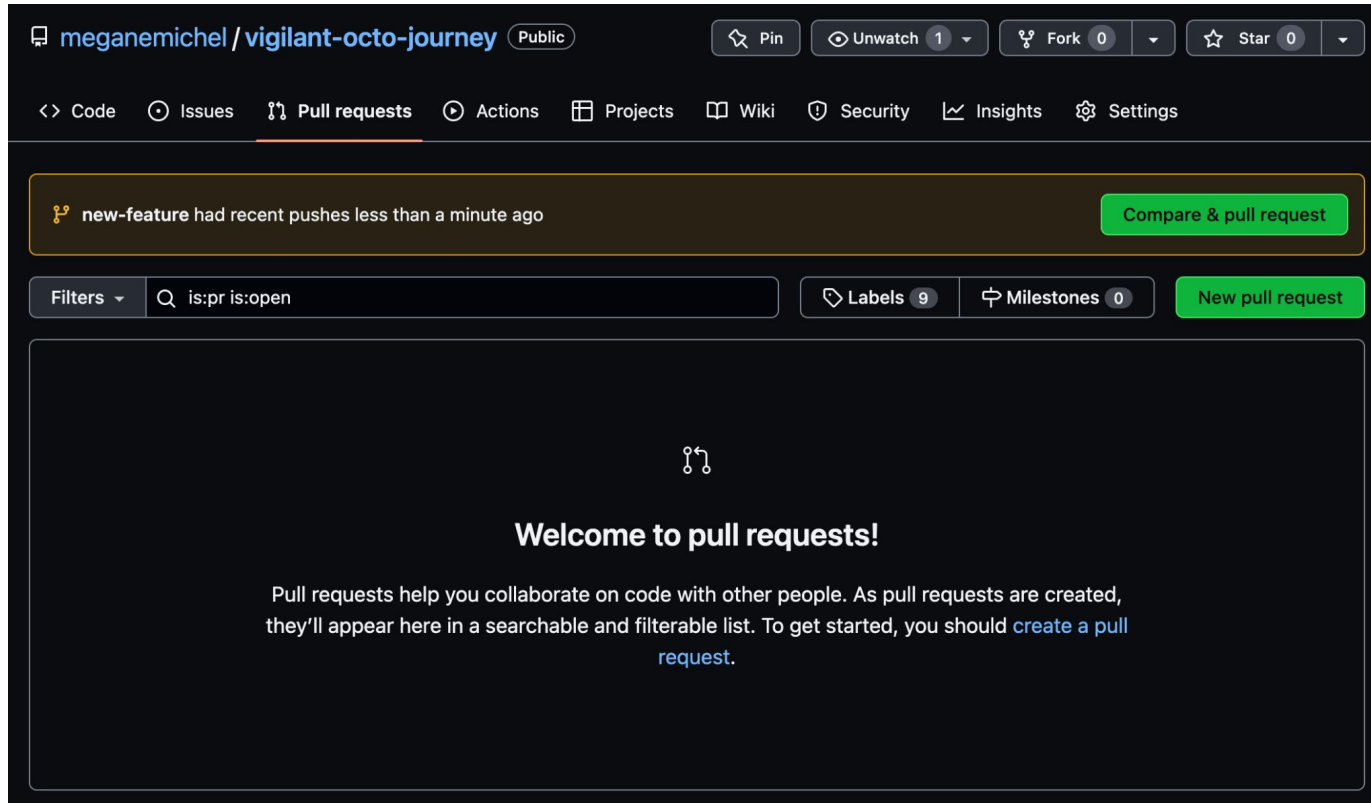

# Pull Request

Pull request: propose changes to a branch from another branch

- a.k.a PRs
- e.g., **request** to pull your changes from dev into main branch
- Allows others to comment and make suggestions before merging into main branch

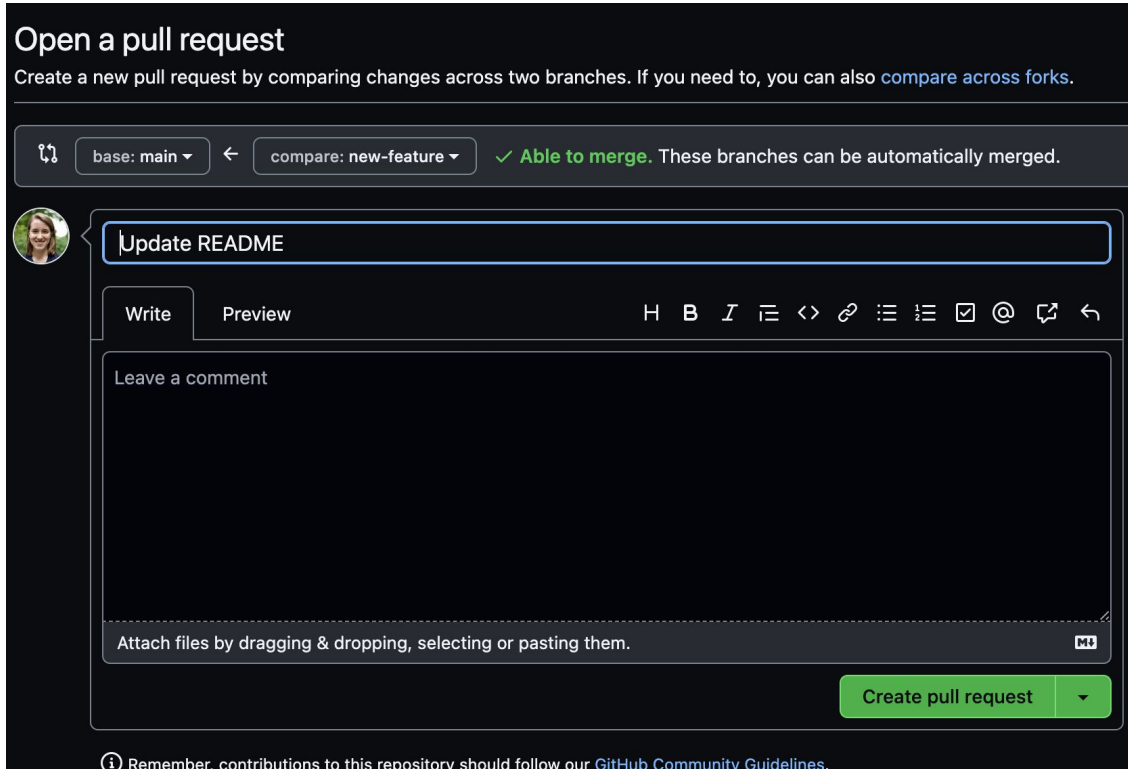

# Pull Request

The screenshot shows the GitHub interface for the repository 'meganemichel / vigilant-octo-journey'. At the top, there are navigation buttons for 'Code', 'Issues', 'Pull requests' (which is highlighted), 'Actions', 'Projects', 'Wiki', 'Security', 'Insights', and 'Settings'. Below the navigation bar, there is a notification bar with a yellow icon and the text 'new-feature had recent pushes less than a minute ago', followed by a green button labeled 'Compare & pull request'. Below the notification bar, there is a search bar with the text 'is:pr is:open', a 'Filters' dropdown, and buttons for 'Labels 9' and 'Milestones 0'. To the right of these buttons is a green button labeled 'New pull request'. The main content area is mostly empty, with a large white icon of a pull request and the text 'Welcome to pull requests!' centered. Below this, there is a paragraph of text: 'Pull requests help you collaborate on code with other people. As pull requests are created, they'll appear here in a searchable and filterable list. To get started, you should [create a pull request](#).'

# Pull Request

**Open a pull request**  
Create a new pull request by comparing changes across two branches. If you need to, you can also [compare across forks](#).

 base: main  compare: new-feature  **Able to merge.** These branches can be automatically merged.

# Pull Request

The screenshot shows a GitHub Pull Request titled "Update README #1". At the top, it indicates that "meganemichel wants to merge 1 commit into main from new-feature". Below this, there are statistics for the pull request: 0 conversations, 1 commit, 0 checks, and 1 file changed. A comment from "meganemichel" states, "This is an important update." Below the comment, the commit details are shown: "Update README" with commit hash "93d59a6".

On the right side, there are sections for "Reviewers" (No reviews), "Assignees" (No one—assign yourself), "Labels" (None yet), "Projects" (None yet), "Milestone" (No milestone), and "Development".

At the bottom, there are two status messages: "Continuous integration has not been set up" (with a warning icon) and "This branch has no conflicts with the base branch" (with a checkmark icon). A green "Merge pull request" button is visible, along with a note that says "You can also open this in GitHub Desktop or view command line instructions." The bottom of the interface shows a "Write" and "Preview" section with a rich text editor toolbar.

# Changes After Review

How to implement requested changes?

- Push the changes to your branch!
- The PR automatically tracks changes to your branch
- Request re-review!

# What if I disagree

with the requested changes?

(or working with *big* teams)

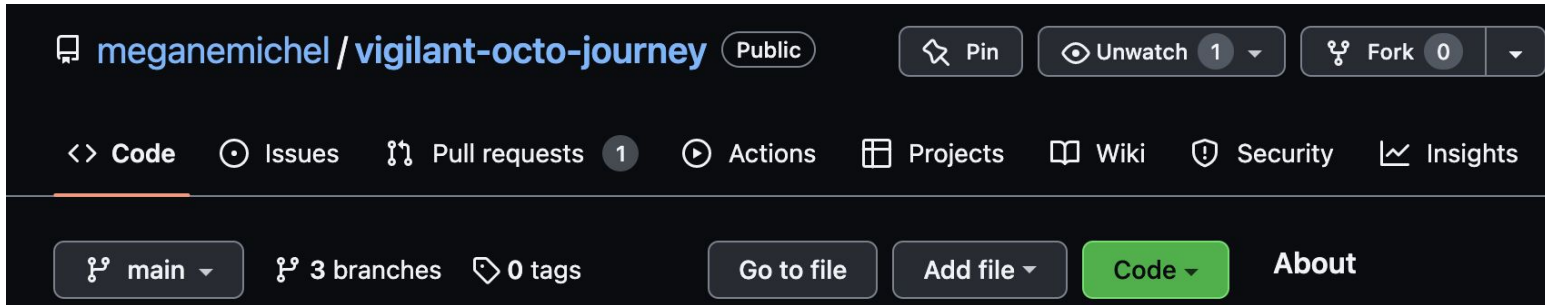

# Fork

# Fork

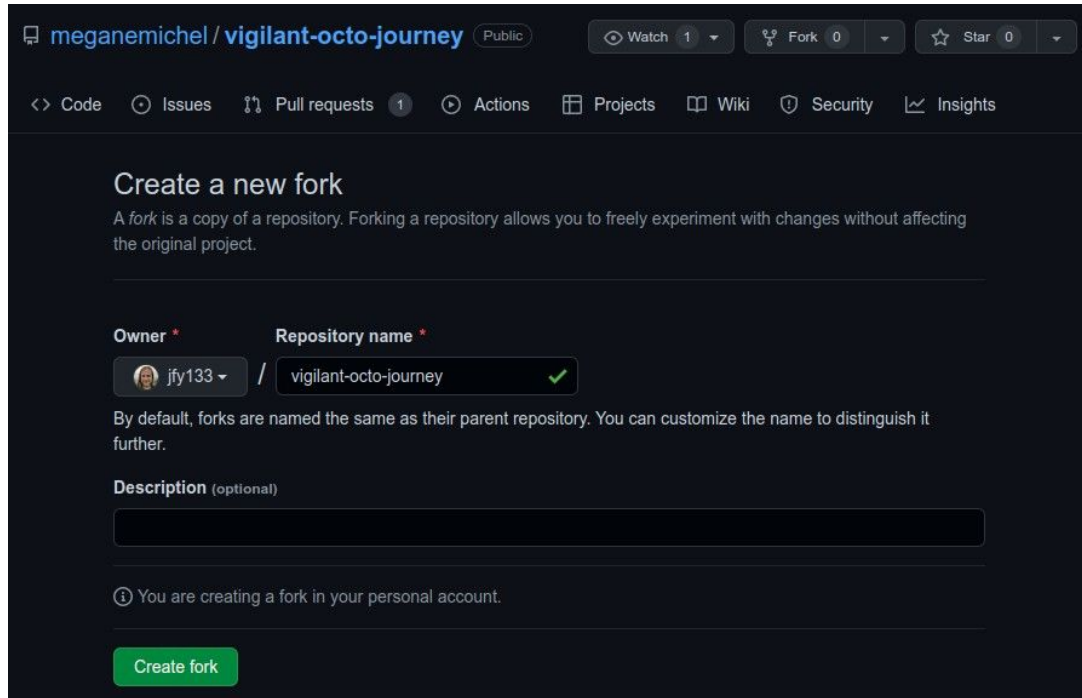

Independent copy of main repository, outside the repository

- Where you can edit without breaking files
- For 'going your own way'
- Provides extra protection - recommended for large-team projects

# Making a fork

<https://github.com/meganemichel/vigilant-octo-journey>

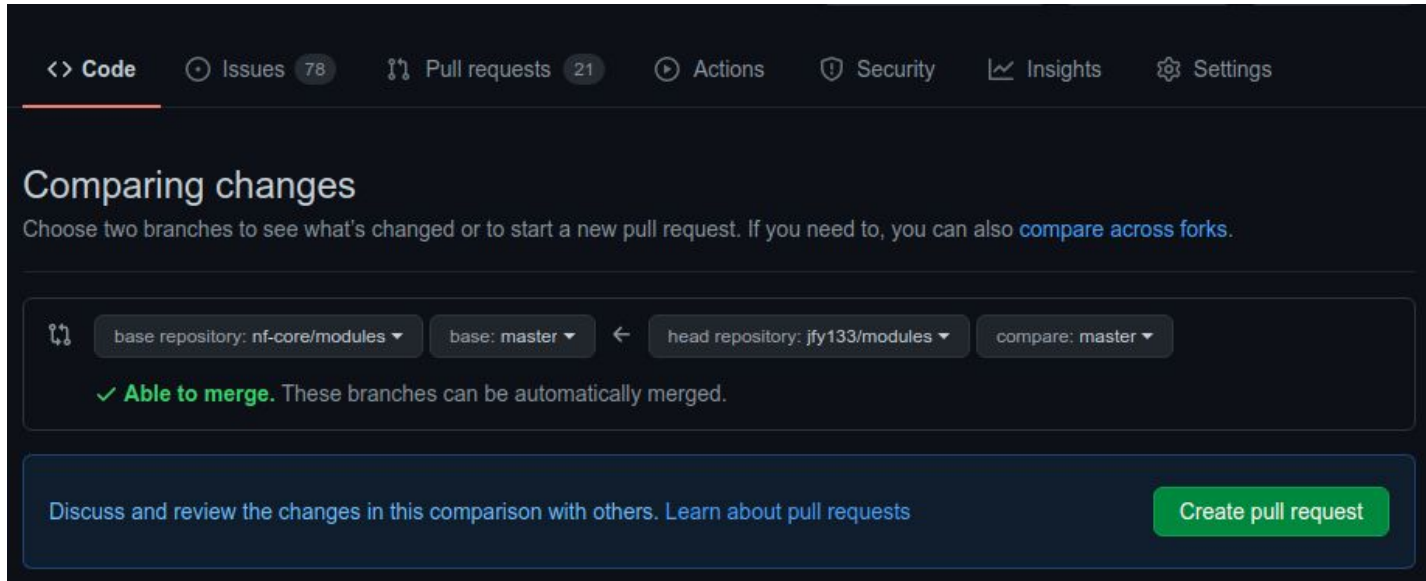

The screenshot shows the GitHub interface for creating a new fork. At the top, the repository path is 'meganemichel / vigilant-octo-journey' with a 'Public' label. To the right are buttons for 'Watch 1', 'Fork 0', and 'Star 0'. Below this is a navigation bar with links for 'Code', 'Issues', 'Pull requests 1', 'Actions', 'Projects', 'Wiki', 'Security', and 'Insights'. The main heading is 'Create a new fork', followed by a brief explanation: 'A fork is a copy of a repository. Forking a repository allows you to freely experiment with changes without affecting the original project.' The form fields are: 'Owner' (jfy133), 'Repository name' (vigilant-octo-journey with a green checkmark), and 'Description (optional)' (empty text box). A note at the bottom states: 'You are creating a fork in your personal account.' A green 'Create fork' button is at the bottom.

# Pull request

Also pull request to and from forks!

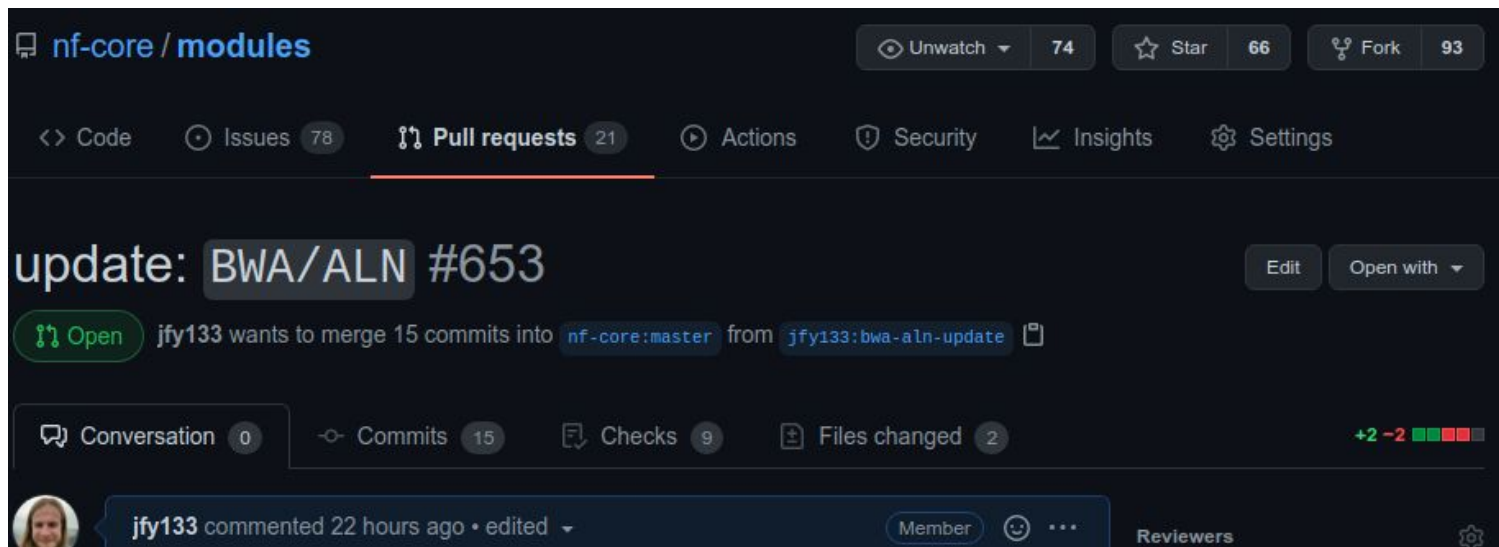

The screenshot shows the GitHub interface for comparing changes. At the top, there are navigation tabs: Code, Issues (78), Pull requests (21), Actions, Security, Insights, and Settings. The main heading is "Comparing changes" with a subtext: "Choose two branches to see what's changed or to start a new pull request. If you need to, you can also [compare across forks](#)." Below this, there are four dropdown menus: "base repository: nf-core/modules", "base: master", "head repository: jfy133/modules", and "compare: master". A green checkmark icon is followed by the text "Able to merge. These branches can be automatically merged." At the bottom, there is a link "Discuss and review the changes in this comparison with others. [Learn about pull requests](#)" and a prominent green button labeled "Create pull request".

# Pull request

Also pull request into forks!

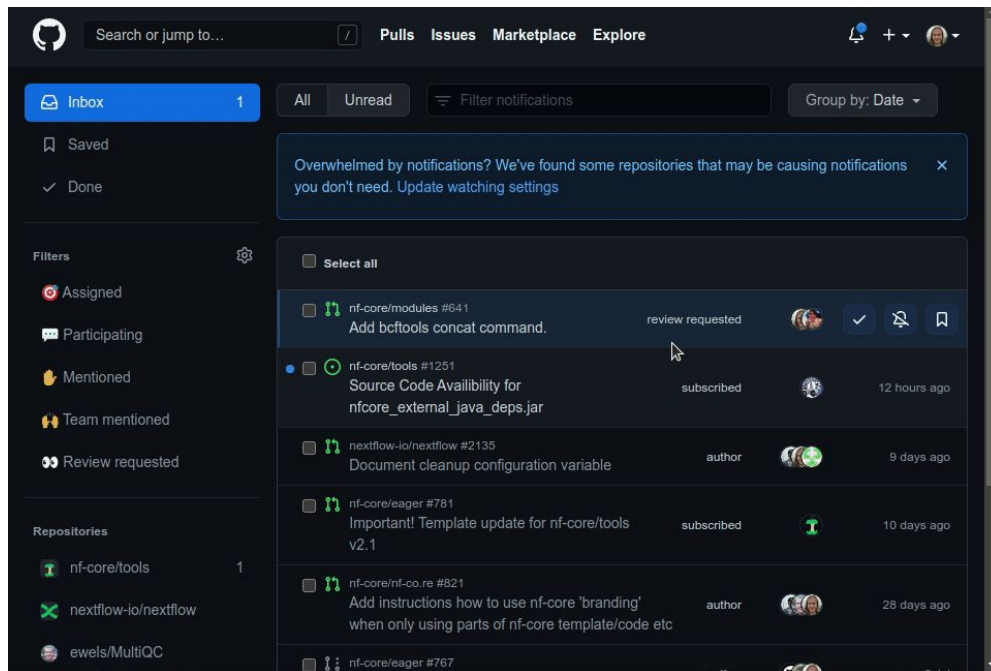

The screenshot shows a GitHub pull request interface for the repository 'nf-core/modules'. The pull request title is 'update: BWA/ALN #653'. It is currently 'Open' and was created by user 'jfy133'. The pull request description states 'jfy133 wants to merge 15 commits into nf-core:master from jfy133:bwa-aln-update'. The interface includes navigation tabs for Code, Issues (78), Pull requests (21), Actions, Security, Insights, and Settings. At the top right, there are buttons for Unwatch (74), Star (66), and Fork (93). Below the title, there are buttons for 'Edit' and 'Open with'. A summary bar shows 'Conversation 0', 'Commits 15', 'Checks 9', and 'Files changed 2' with a net change of '+2 -2'. A comment from 'jfy133' is visible at the bottom, stating 'commented 22 hours ago • edited'. The user 'jfy133' is identified as a 'Member' and is listed as a 'Reviewer'.

# Reviewing PRs

Pull request tab  Blue Button  Review Changes

The screenshot shows the GitHub notifications interface. The 'Inbox' tab is selected, showing a list of notifications. A notification for 'nf-core/modules #641' is highlighted, showing a 'review requested' status. The notification list includes:

- Select all**
-  nf-core/modules #641: Add bcftools concat command. review requested
-  nf-core/tools #1251: Source Code Availability for nfcore\_external\_java\_deps.jar. subscribed
-  nextflow-io/nextflow #2135: Document cleanup configuration variable. author
-  nf-core/eager #781: Important! Template update for nf-core/tools v2.1. subscribed
-  nf-core/nf-co.re #821: Add instructions how to use nf-core 'branding' when only using parts of nf-core template/code etc. author
-  nf-core/eager #767

# Merge

# Approve and Merge

Once collaborator approves changes, you can merge your branch into the main

# Summary and Practical Task: Branch and Fork

1. Fork `github.com/meganemichel/vigilant-octo-journey`
2. `git clone`
3. Make new branch with `git checkout -c`
4. Update README
5. Push changes to your fork
6. Make a PR back into `meganemichel/vigilant-octo-journey`

# Merge Conflicts

And how to resolve them

# Conflict!

But what if same file or lines of file been modified in both `main` and your branch!?

# Merge Conflict

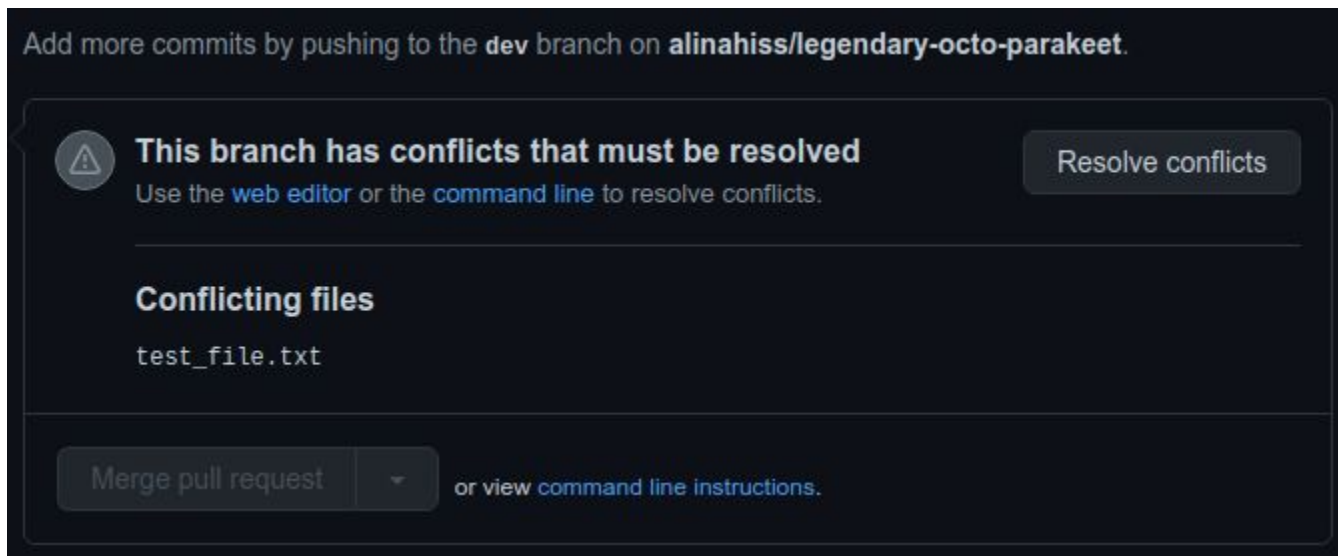

When `git` doesn't know which is the 'correct' line or file

- two people have changed the same lines in a file
- one developer deleted a file while another developer was modifying it

# How to know when you have a conflict

On GitHub:

Add more commits by pushing to the `dev` branch on `alinahiss/legendary-octo-parakeet`.

 **This branch has conflicts that must be resolved** Resolve conflicts

Use the [web editor](#) or the [command line](#) to resolve conflicts.

---

**Conflicting files**

`test_file.txt`

---

Merge pull request  or view [command line instructions](#).

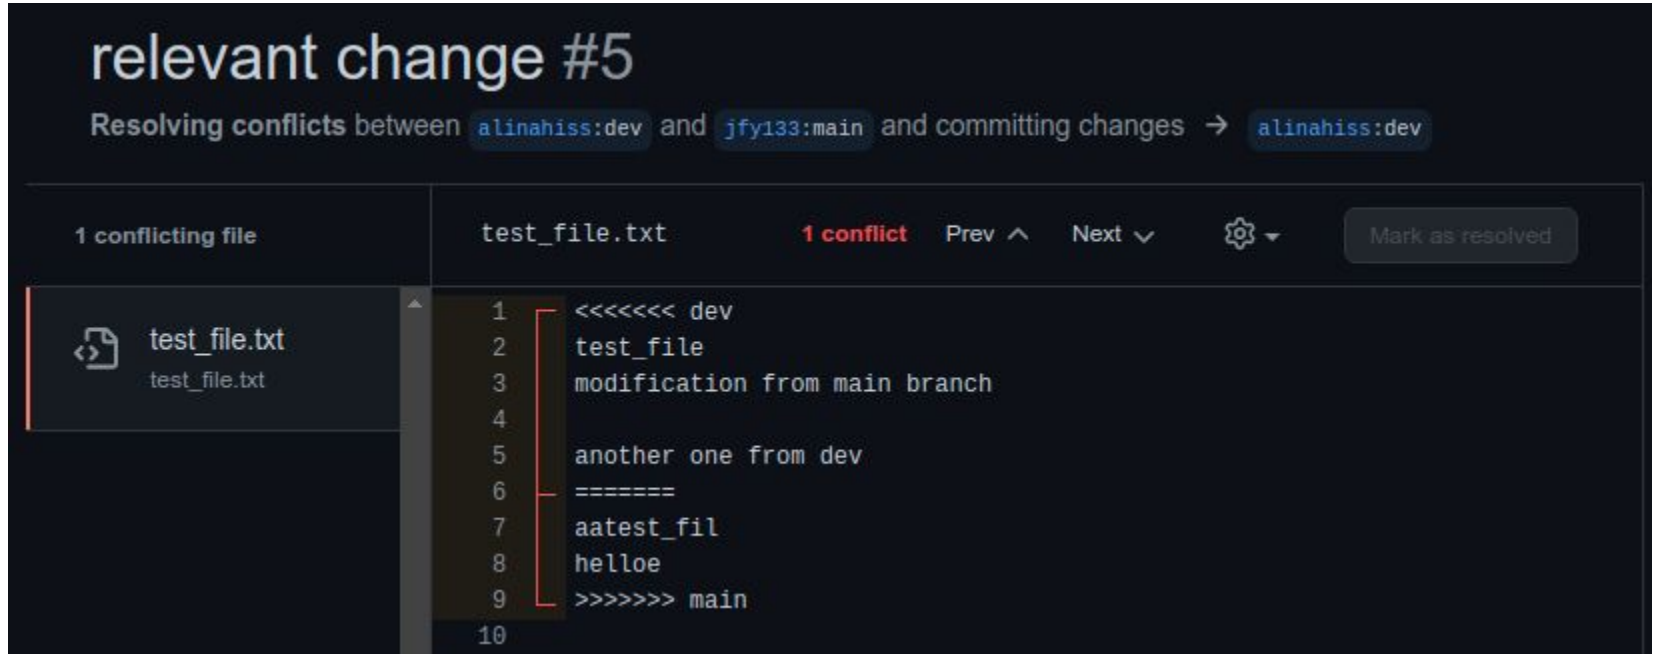

# How to know when you have a conflict

On the command line

```
$ git pull
error: Entry '<fileName>' would be overwritten by merge. Cannot merge. (Changes in staging area)
```

# Resolving a simple conflict (on github)

The screenshot shows a GitHub conflict resolution interface for the file `test_file.txt`. The title is "relevant change #5" and the subtitle is "Resolving conflicts between `alinahiss:dev` and `jfy133:main` and committing changes → `alinahiss:dev`".

The interface shows a sidebar on the left with "1 conflicting file" and a file icon for `test_file.txt`. The main area displays the conflict for `test_file.txt` with a "1 conflict" indicator. The conflict is shown as follows:

```
1 <<<<<<< dev
2 test_file
3 modification from main branch
4
5 another one from dev
6 =====
7 aatest_fil
8 hello
9 >>>>>> main
10
```

e.g. we both modified line 1. Is `aatest_fil` or `test_file` correct?

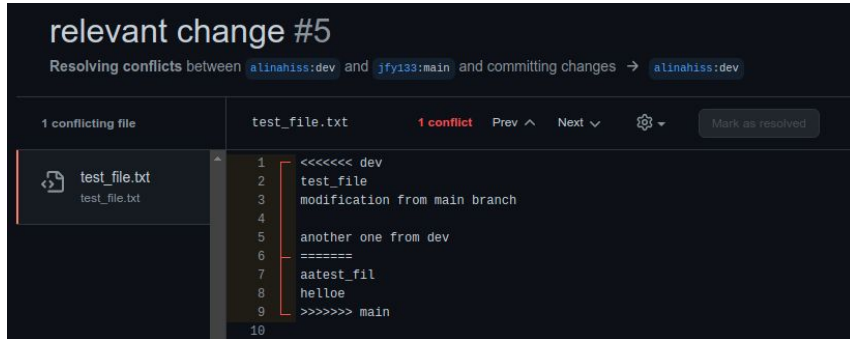

# What a merge conflict looks like

- Incoming change (the later change - e.g. from your remote)
  - <<<<<<< dev
- Separator
  - =====
- Current change (what you currently have on your local)
  - >>>>>>> main

# Resolving a simple conflict

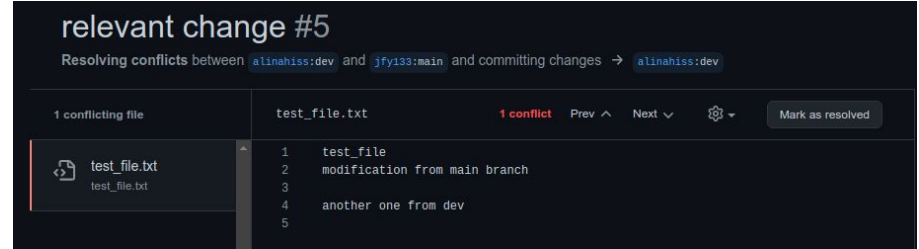

Delete which you think is 'right'!

```
relevant change #5
Resolving conflicts between alinahiss:dev and jfy133:main and committing changes -> alinahiss:dev

1 conflicting file
test_file.txt 1 conflict Prev ^ Next v [gear] Mark as resolved

test_file.txt

10
```

# Where to 'resolve a conflict'

- Simple: on GitHub (e.g. couple lines)
- Complex: locally on your machine with your IDE

## Checkout via command line

If you cannot merge a pull request automatically here, you have the option of checking it out via command line to resolve conflicts and perform a manual merge. However, the following steps are not applicable if the base branch is protected.

HTTPS Git Patch `git://github.com/alinahiss/legendary-octo-parakeet.git`

Step 1: From your project repository, check out a new branch and test the changes.

```
git checkout -b alinahiss-dev main
git pull git://github.com/alinahiss/legendary-octo-parakeet.git dev
```

Step 2: Merge the changes and update on GitHub.

```
git checkout main
git merge --no-ff alinahiss-dev
git push origin main
```

# Summary: Merge conflicts

- Merge conflict: same line modified on two branches/forks
- Indicated with
  - >>> <BRANCH>
  - ===
  - <<< <BRANCH>
- When conflict is:
  - Simple: on GitHub
  - Complex: locally (follow instructions)

# Merging

If changed files on `main` not changed on your branch, simply

```
$ git fetch upstream  
$ # or git pull
```
