

In this data repository, the global potential invasion maps for traded birds, at spatial resolution of 1 degree, are provided. The name of the files explains what the maps are. Here is a brief description about the names and their meanings:

inv_risk_current.tif # potential invasion risk for the current time

inv_risk_SSPXXX.tif # potential invasion risk for the future time (for corresponding SSP scenario and Year)

inv_risk_DELTA_XXXX.tif # Change in the invasion risk between future (given the specified SSP and Year) and current

richness_XXX.tif # richness of traded birds for the current and future times

species_distribution_XXX.zip (contains 609 GeoTiff map corresponding to individual species distribution for the current and future times)
