

Opening up the access to research

<https://doi.org/10.5281/zenodo.7135808>

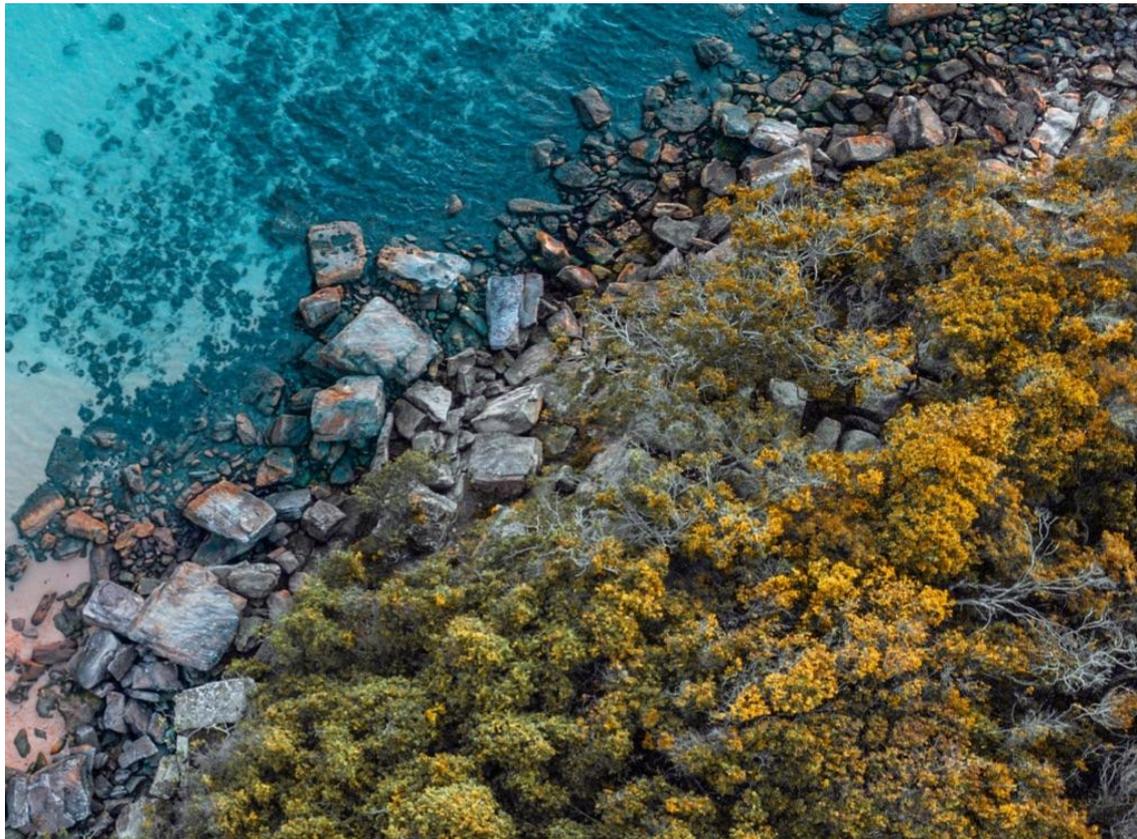

26 October 2022

PRESENTED BY

Matthias Liffers, Research Data Specialist (Informatics)

ACKNOWLEDGEMENT OF COUNTRY

We acknowledge and celebrate the First Australians on whose traditional lands we meet, and we pay our respect to their elders past, present and emerging.

Australian Research Data Commons

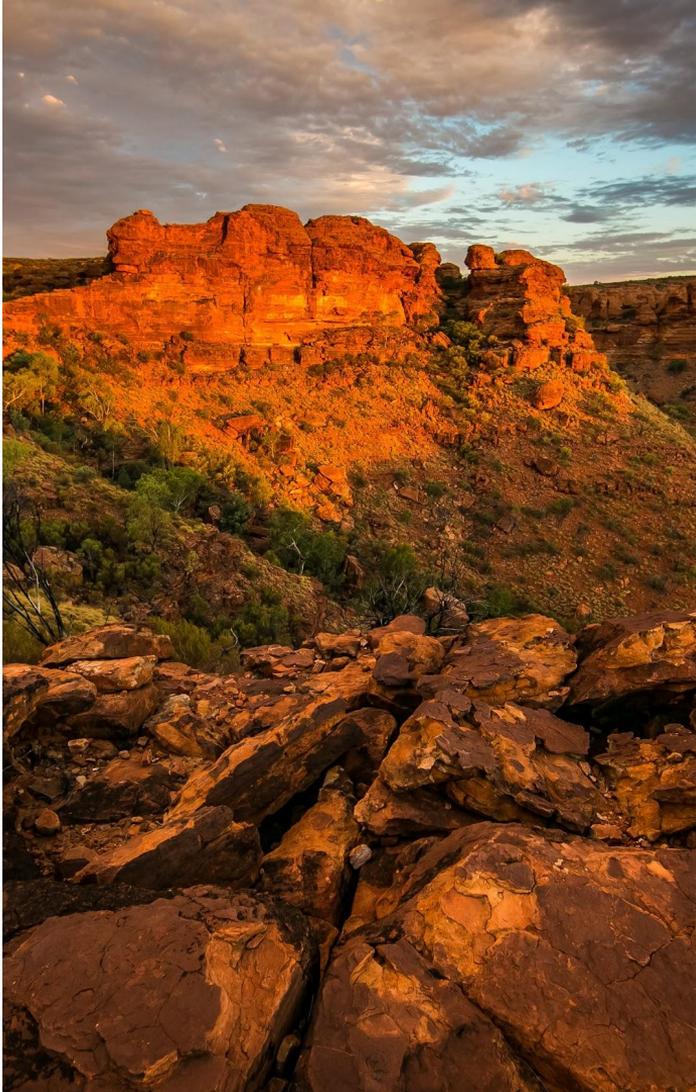

Purpose

To provide Australian researchers with competitive advantage through data.

Mission

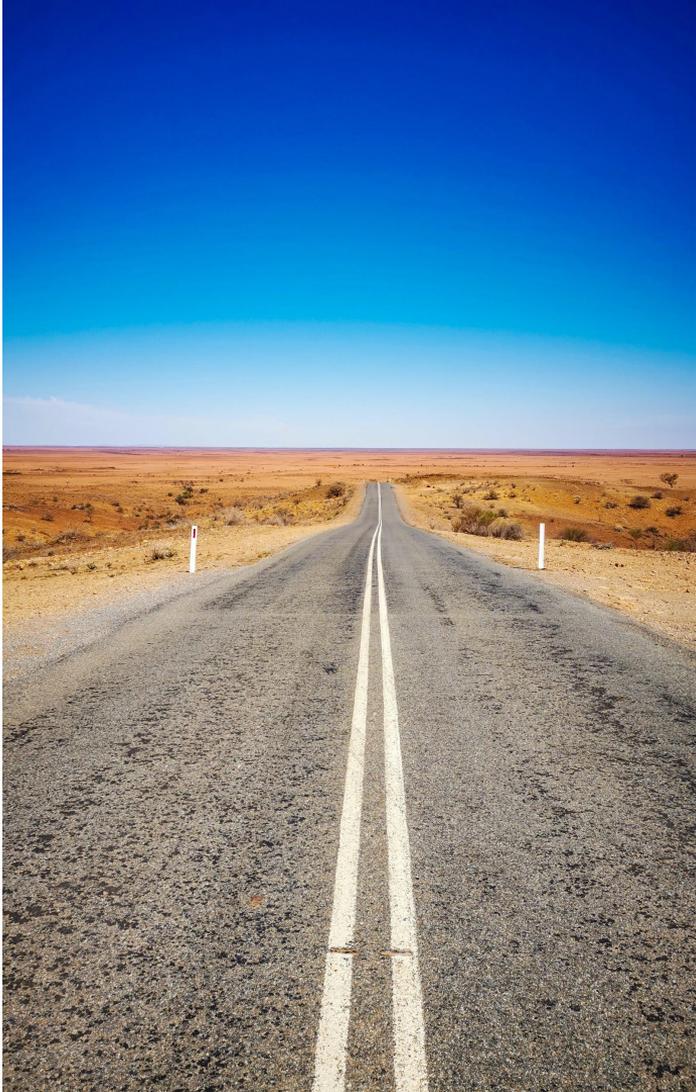

To accelerate research and innovation by driving excellence in the creation, analysis and retention of high-quality data assets.

Opening access to research...

- ... software
- ... computing infrastructure
- ... data from clinical trials
- ... activities metadata

Everything we do is underpinned
by the FAIR principles

FAIR Policy for ARDC and ARDC Co-Investment Project Materials

The ARDC recognises that open and accessible outputs of research drive research innovation, impact, and quality. Researchers and the broader community benefit from the knowledge produced by publicly-funded activities.

The ARDC is committed to maximising the impact of outputs of the ARDC and ARDC co-investment project activities by ensuring they are disseminated as widely as possible and in a manner which enables maximum reuse by humans and machines.

The ARDC has developed a FAIR policy for outputs both from ARDC projects and from co-investment projects we are a partner in.

The ARDC requires the FAIR principles to be applied to its own materials and to outputs from co-investment projects unless there is a valid case why the principles cannot be applied, and this is accepted by the ARDC.

Download the FAIR Policy below.

Application of the Policy

What is the Virtual Desktop Service?

The *Virtual Desktop Service* is a service of the [Australian Research Data Commons \(ARDC\)](#) and utilises the ARDC Nectar Research Cloud. This service allows researchers to easily and quickly create a Virtual Desktop - A Personal Computer in the cloud.

Enhance your research with quick and easy access to extra computational capabilities.

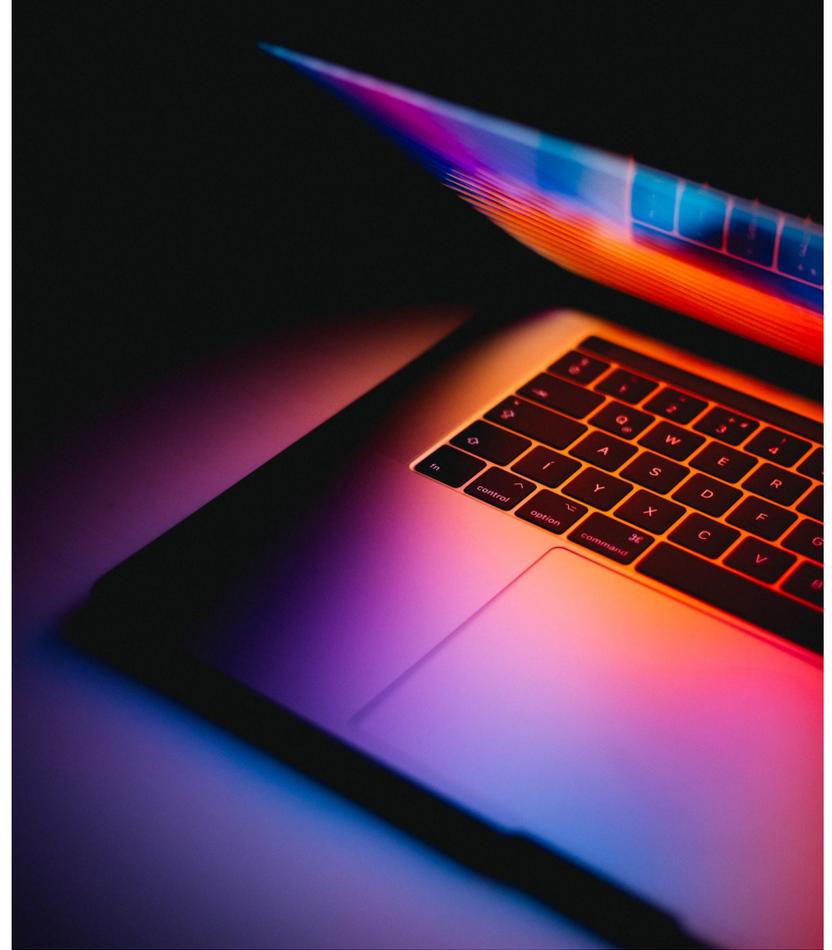

Need another computer to carry out compute processes for your research? You may find the Virtual Desktop Service useful to free up your laptop/workstation or to have a computer that you can leave running for uninterrupted processing for up to 14 days (with the ability to extend). The Virtual Desktop runs on the ARDC Nectar Research Cloud and offers a number of different desktop environments.

Democratising access to the cloud
