Abstract

This work analyzes CO2 emissions per capita (CpC) in the period 1990-2020. The dataset includes 212 countries, 99.8% of the global CO2 emissions.

The world average CpC was 4.3366 tCO2/y,cap in 2020, 4.1% above the 1990 level.

CO2 emissions above the world average CpC in the period 1990-2020 by 81 countries were 39% of the global CO2 emissions in this period, which increased Global Warming by 0.249°C. The average CpC in 2020 of the 81 countries above the world average CpC was 8.62 tCO2/y,cap in 2020, 5.6 times more than the countries below the world average.

100 countries reduced CO2 emissions per capita between 1990 and 2020 by 21% on average, compared to the world average increase of 53%. The reduction of the CpC by the 100 countries decreased Global Warming by 0.21°C.

OECD (1990) countries and Annex I (Kyoto) countries, 41 countries having 22% of the world population, caused 49% of the Global Warming +0.316°C between 1990 and 2020. This group of countries reduced CO2 emissions by 21% between 1990 and 2020, however, the group's average CpC was still 206% of the world average in 2020, with 8.94 tCO2/y,cap, compared to 3.38 tCO2/y,cap of the rest of the world.

10 countries above the world average of CO2 emissions per capita (2020) with the highest change in cumulative CO2 emissions between 1990 and 2020, caused 63%

of the Global Warming, +0.407°C, in the period. The average CpC of these 10 countries was 195% of the world average, 8.71 tCO2/y,cap in 2020, compared to 2.36 tCO2/y,cap of the rest of the world. The CO2 emission of 5 countries from this group is above the group's average CpC of 8.71 tCO2/y,cap, 7% of the global emissions of the world.

Keywords: Climate Change, Global Warming, CO2 emissions, CO2 per capita

Glossary

ΔCO_2	CO2 emissions of the country above the world emissions per capita in the period 1991-2020, tCO2
Ave	average
BL	baseline
CCO_2	global cumulative CO2 emissions according to publication [1] [2], CO2 emissions produced from fossil fuels and cement production only – land use change is not included, tCO2
CO2	emissions of Carbon Dioxide, CO2
$\text{CO}_2 \rightarrow \text{GW}$	correlation between cumulative CO2 emissions and Global Warming = $0.000745^\circ\text{C}/\text{GtCO}_2$ [3]
CpC	CO2 emissions per capita, tCO2/y,cap (ton CO2 per year, per population of the country)
CpCW	world average CO2 emissions per capita, tCO2/y,cap (ton CO2 per year, per population of the world)
Global Warming	global surface temperature change over land+ocean above 1850-1900 baseline ($^\circ\text{C}$)
Group+10P	10 countries above the world average of CO2 emissions per capita (2020) with the highest change in cumulative CO2 emissions between 1990 and 2020

Group1990	OECD members in 1990 or Annex I countries which signed or ratified Kyoto Protocol
Group2022	OECD members in 2022 or Annex I countries which signed or ratified Paris Agreement.
GtCO2	Giga-ton of CO2, 10^9 ton, 10^9 ton, 1,000,000,000 ton of CO2
ktCO2	kilo-ton CO2 = 10^3 ton, 10^3 ton, 1,000 ton CO2
MtCO2	Mega-ton CO2 = 10^6 ton, 10^6 ton, 1,000,000 ton CO2
OWID	Our World in Data – Internet site [1] [2]
Pn	Population of the country in year n
Ref	reference
tCO2	ton CO2
tCO2/y,cap	ton CO2 per year, per capita

Formula for Average Annual Change

Formula 1 - Average annual change of parameter X in the period 1990-2020
[%/year]

$$rX = (X2/X1)^{(1/(y2-y1))} - 1$$

rX	average annual change of parameter X in the period from y1 to y2, %/year
X1	value of parameter X at the beginning of the period
X2	value of parameter X at the end of the period
y1	beginning of the period = 1990
y2	end of the period = 2020

Correlation between Cumulative CO2 Emissions and Global Warming

The correlation between cumulative CO2 emissions and Global Warming was analyzed in the publication “Global Warming and Cumulative CO2” [3].

The correlation is:

Formula 2 - Correlation between Cumulative CO2 Emissions and Global Warming
[3] [°C/GtCO2]

$$\text{CO2} \rightarrow \text{GW} = 0.000745^{\circ}\text{C}/\text{GtCO2}$$

Dataset

Table 1 - CO2 emissions and population dataset [1] [2]

	CO2 emissions			Population
	World	International Transport	Countries

Cumulative CO2 emissions baseline	1749	1949	1989	

The datasets are from publication [1] [2], CO2 emissions produced from fossil fuels and cement production only – land use change is not included.

Table 2 - Completeness of data for 1990

	CO2 MtCO2/y	Population
World	22,750	5,327,529,078
International transport	558	
World without international transport	22,192	
Dataset 212 countries	22,192	5,318,336,356
Dataset to World	100.0%	99.8%

Table 3 - Completeness of data for 2020

	CO2 MtCO2/y	Population
World	34,807	7,794,798,725
International transport	1,004	
World without international transport	33,803	
Dataset 212 countries	33,790	7,782,877,679
Dataset to world	100.0%	99.8%

Cumulative Global CO2 Emissions

Total global CO2 emissions per year are from 1750 [1] [2]. This is also the first year of calculations of the cumulative CO2 emissions of the world, which means that for this parameter the baseline is 1749.

However, international transport CO2 emissions are from 1950 and the first year of the cumulative CO2 emissions is 1950 [1] [2], which means that for this parameter the baseline is 1949.

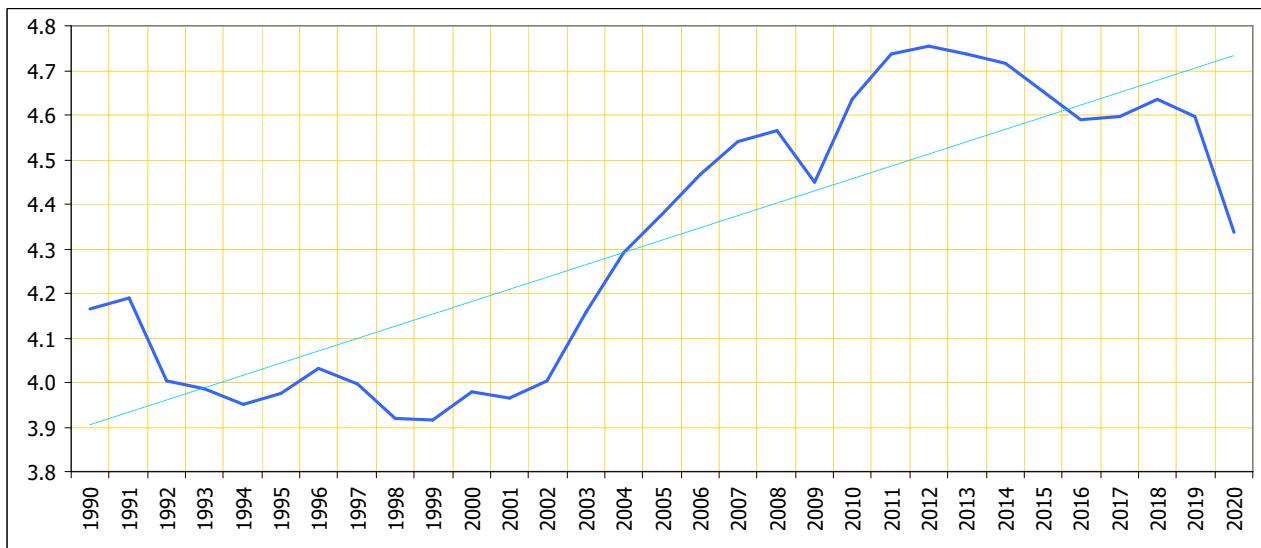

The dataset was converted to the 1875 baseline in the publications [6] [7].

Table 4 - Global cumulative CO2 emissions and international transport [6]
[7] [tCO2 above 1875 baseline]

	1990	2020
Global cumulative CO2 emissions including international transport	tCO2	792,689,057,443
International transport cumulative CO2 emissions	tCO2	16,042,804,984
Global cumulative CO2 emissions without international transport	tCO2	776,646,252,459

International transport cumulative CO2 emissions are not related to the specific country, therefore, the comparison between the countries' CO2 emissions and the world is to the global cumulative CO2 emissions without international transport.

Change in CO2 Average Annual Emissions per Capita from 1990 to 2020

The average annual change in the world CO2 emissions per capita in the period 1990-2020 was calculated using Formula 1.

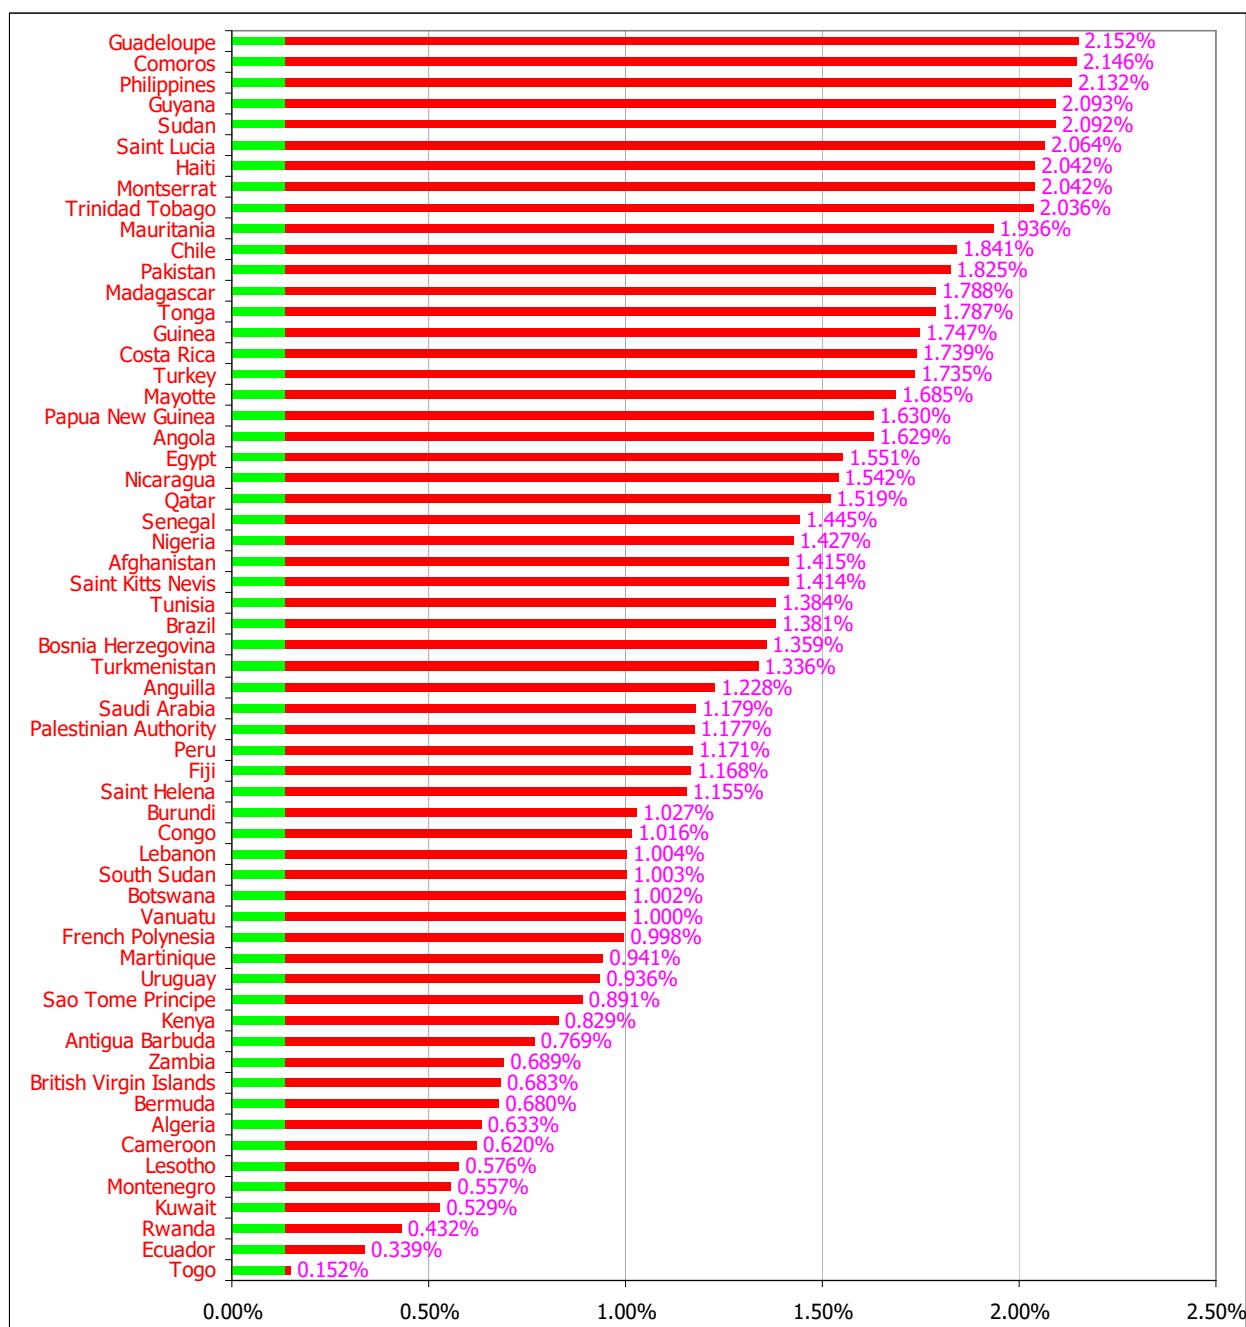

The average change is 0.134% per year.

Chart 6 - CO2 emissions per capita in the period 1990-2020 [#1/4]: 60 countries with the biggest average annual change [%/year]

The green range is the world average change in 1990-2020 = 0.134%/y

Chart 7 - Average annual change in CO2 emissions per capita in the period 1990-2020 [#2/4] [%/year]

The green range is the world average change in 1990-2020 = 0.134%/y

Chart 8 - Average annual change in CO2 emissions per capita in the period 1990-2020 [#3/4] [%/year]

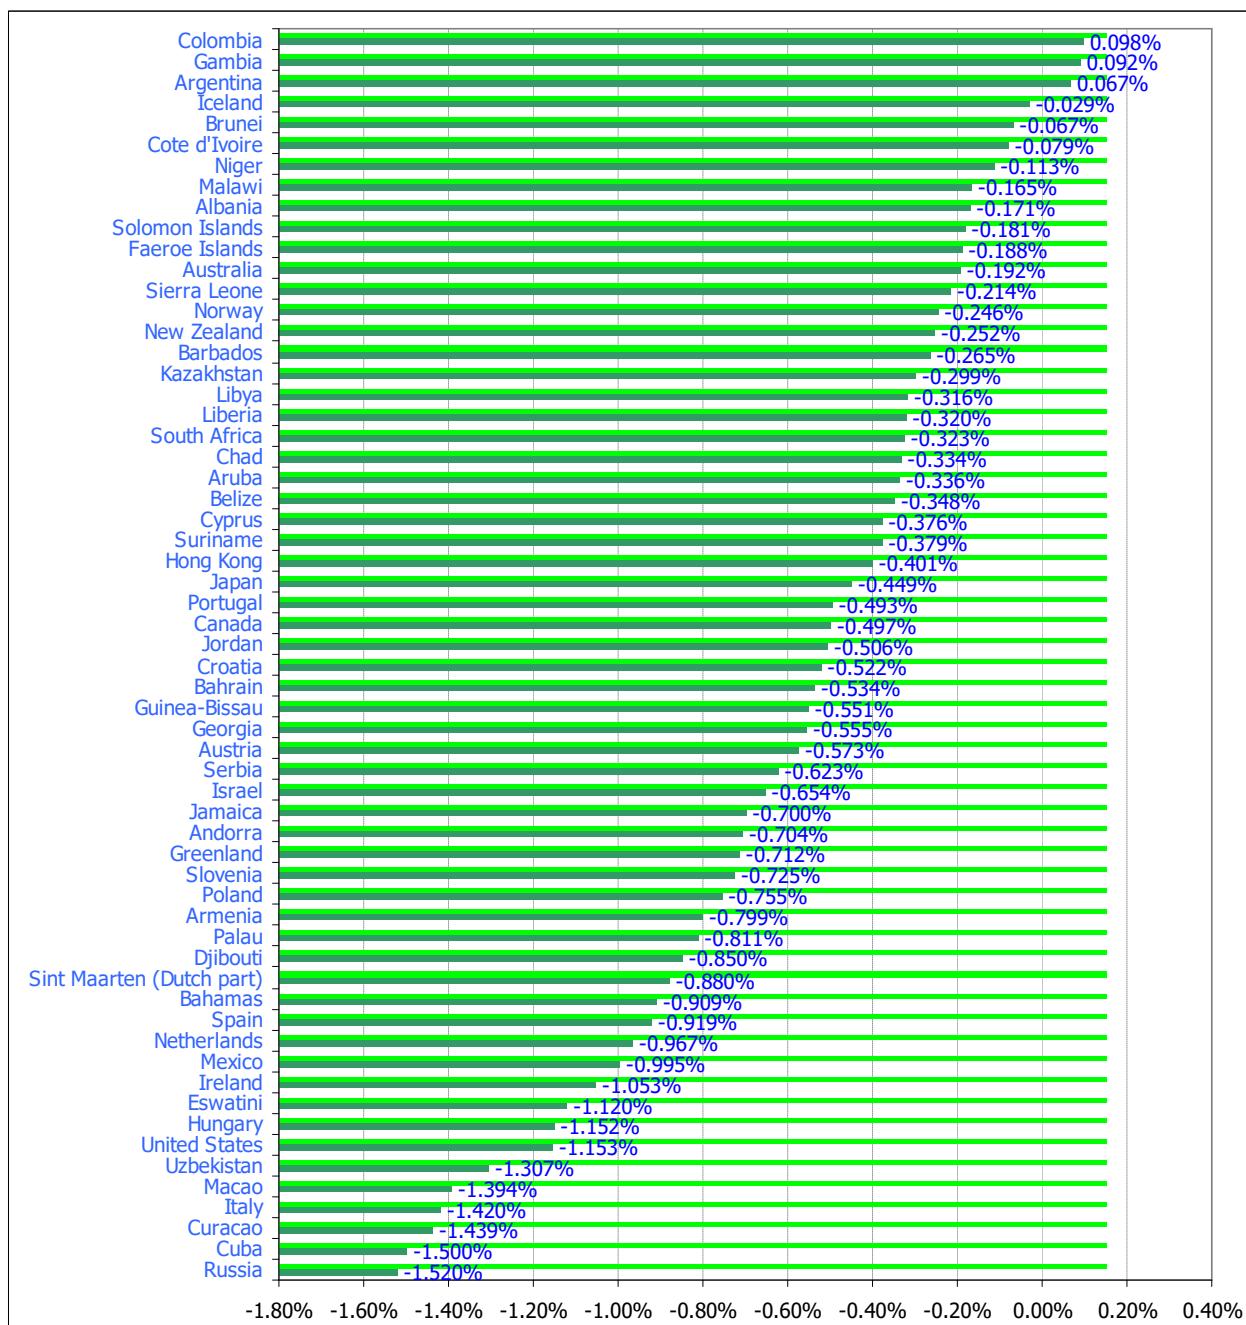

Chart 9 - Average annual change in CO2 emissions per capita in the period 1990-2020 [#4/4] [%/year]

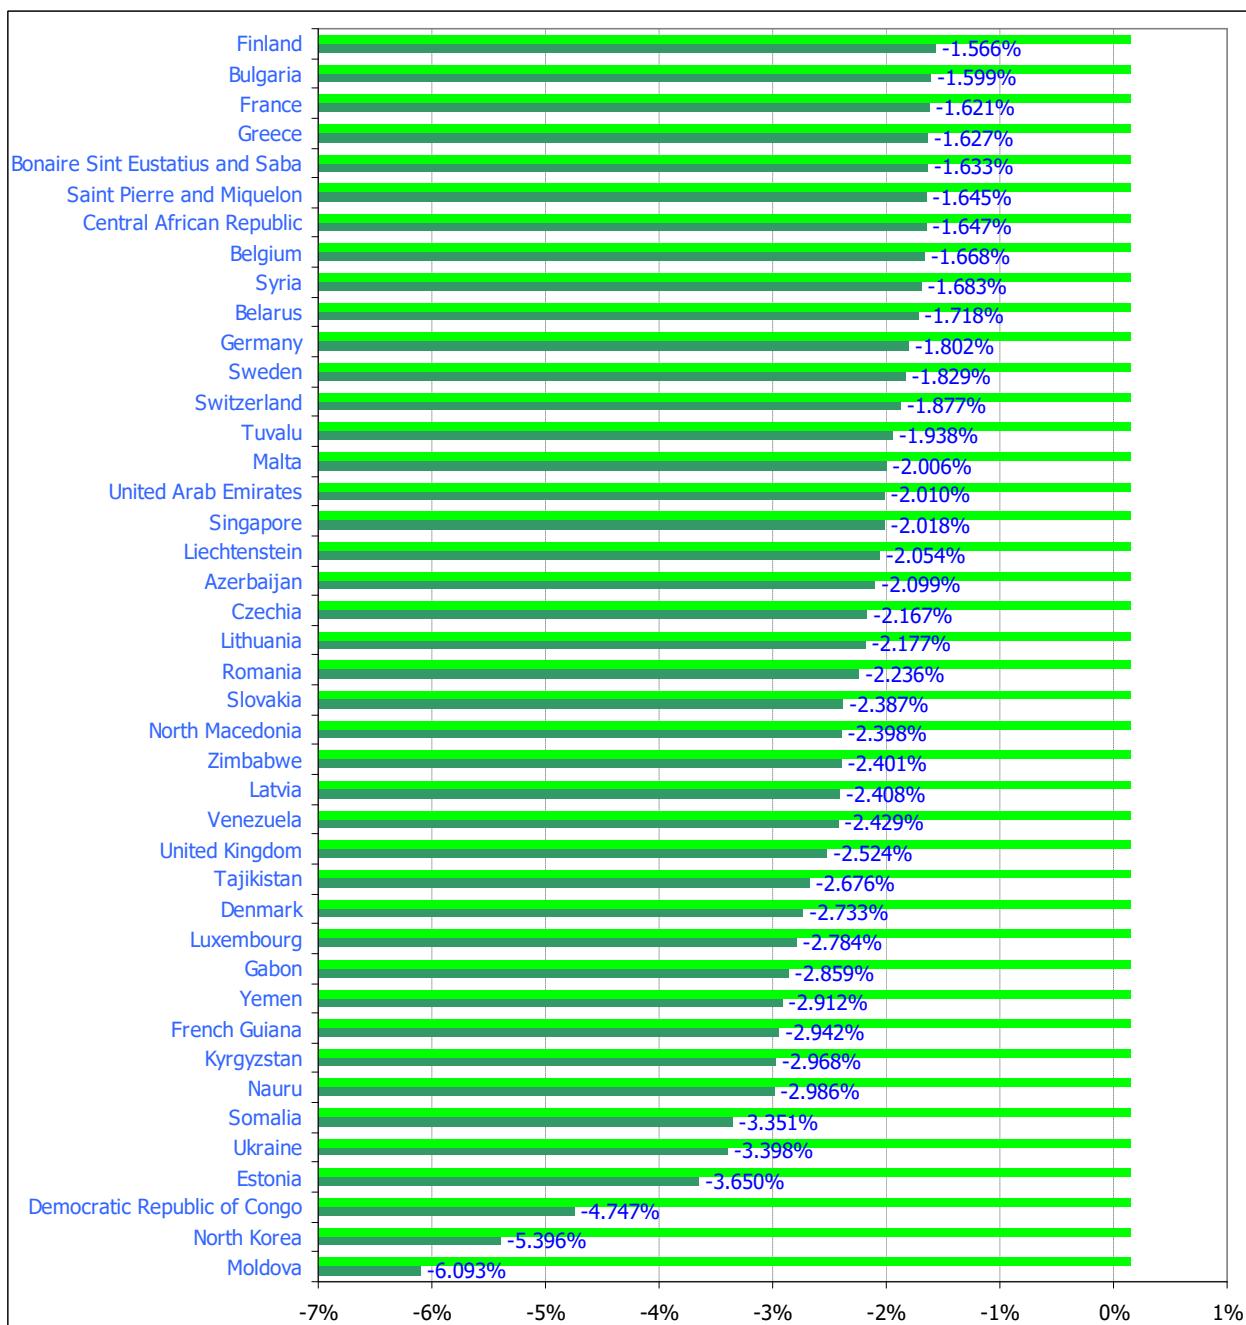

Table 7 - Countries above and below the world average annual change in CpC

	Countries	Population	CO2/y	CpC
			2020	2020
		MtCO2/y	tCO2/y/cap	
Countries > World	110	5,739,286,709	20,000	3.48
Countries < World	102	2,043,590,970	13,790	6.75

Global Warming from CO2 Emissions above World CpC in the Period 1990-2020

Formula 3 - CO2 emissions above the world emissions per capita in the period 1991-2020 [tCO2]

$$\Delta CO2 = \sum_{n=1991}^{2020} (CO2_n - CpCW_n \times P_n)$$

$\Delta CO2$	CO2 emissions of the country above the world emissions per capita, in the period 1991-2020, tCO2
$CO2_n$	Actual CO2 emissions of the country in year n, tCO2/y
$CpCW_n$	World average of the CO2 emissions per capita in year n, tCO2/y, cap

P_n Population of the country in year n

Table 8 - Global Warming from CO2 emissions above the world CpC in the period 1990-2020

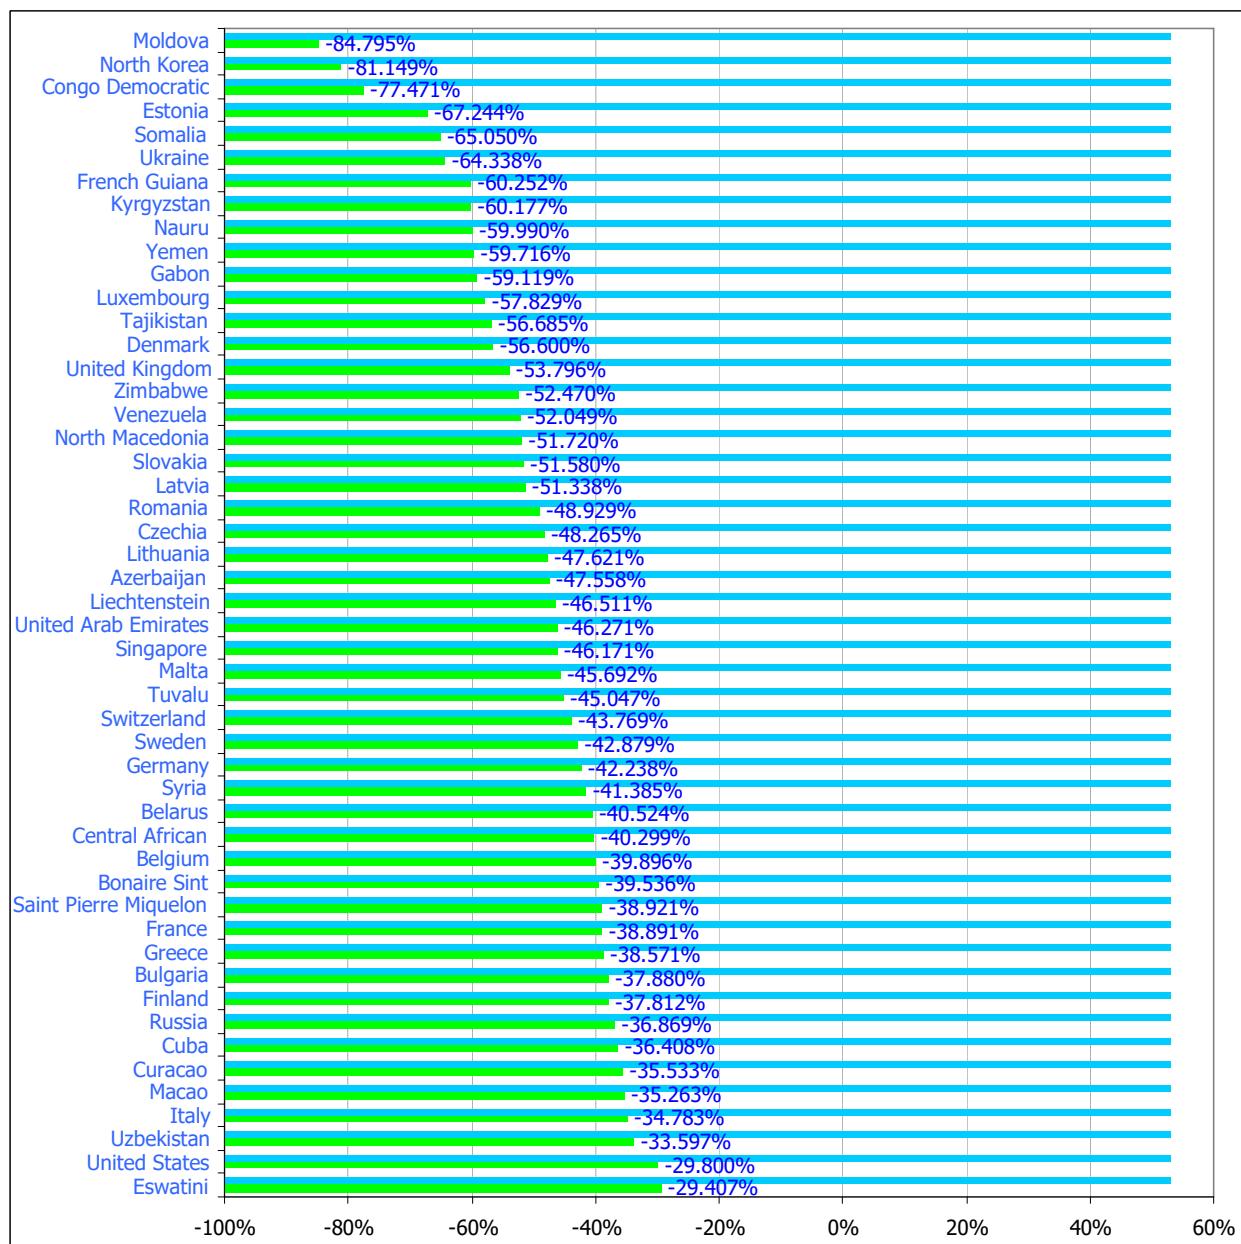

Global cumulative CO2 emissions in the period	861	GtCO2/30y
Countries	87	
CO2 emissions above the world CpC	335	GtCO2/30y
% of global emissions in the period	39%	%/30y
CO2→GW [3]	0.0007454	°C/GtCO2
Global Warming caused by CO2 emissions above the world CpC	0.25	°C

CO2 emissions above the world average in the period 1990-2020 were 335 GtCO2 by 87 countries, 39% of the global CO2 emissions in the same period.

These CO2 emissions above the world average increased Global Warming by 0.25°C, according to the correlation rate 0.000745°C/GtCO2 [3].

Group1990 Years to Zero Emissions per Year

Group1990 decreased the CO2 emissions per year by 3,116 Mt CO2/y from 1990 to 2020, 104 Mt CO2/y² on average. If this 104 Mt CO2/y² annual CO2 mitigation will continue also in the future, Group1990 countries will reach the Zero Emissions target in 2135.
