International funders workshop on the Future of Research Software.

November 8, 2022, Amsterdam.

What does Research Software look like?

<https://doi.org/10.5281/zenodo.7347659>

# What is Research Software?

Source code files, algorithms, scripts, computational workflows and executables that were created during the research process or for a research purpose.

Source: Barker, Chue Hong & Katz et al. Introducing the FAIR Principles for research software, Nature Scientific Data, 2022. <https://doi.org/10.1038/s41597-022-01710-x>

# Research Software comes in many smells and flavours

Sometimes ...

software is a component in our scientific instruments

software is the instrument

software analyses research data

software presents research results

software is superglue, duct tape and lubricant

Software is a  
crucial part of  
our instruments

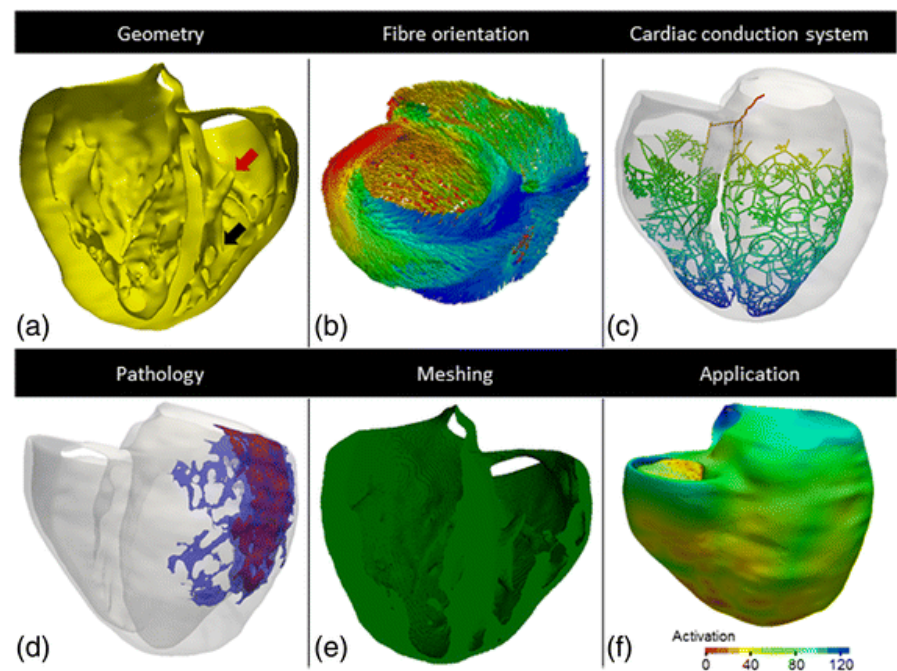

# Software is the instrument

[www.mappingtheviaappia.nl](http://www.mappingtheviaappia.nl)

# Software is superglue, duct tape, lubricant

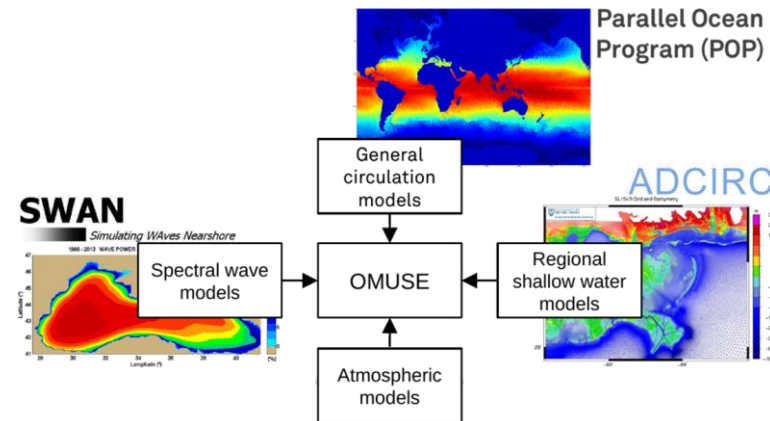

## Automation

Workflows, deployment

## Integration

coupling models,  
combining models and observations,  
linking data sets

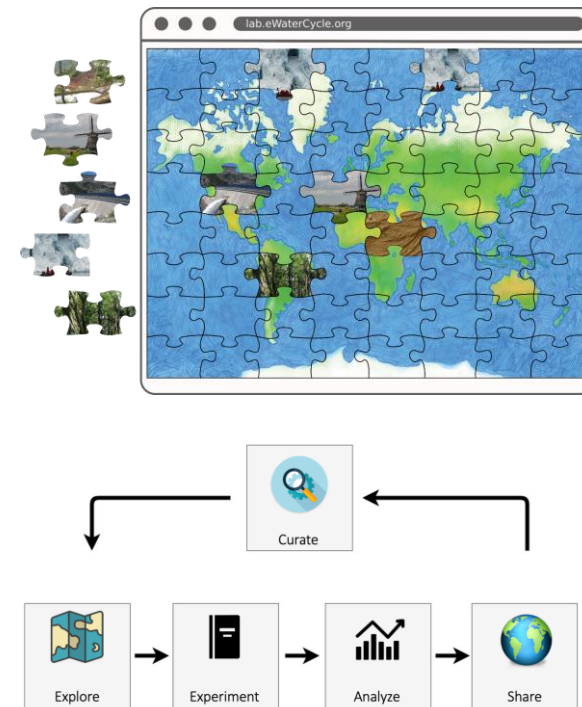

Courtesy Henk Dijkstra, et al.

## Research sharing

share, reproduce and reuse

Courtesy Nick vd Giesen, et al.

# Without software...

We cannot build and operate our scientific instruments

We cannot model climate change, our ecosystems, our bodies,  
virus outbreaks, our social interactions, inequality, ...

We cannot process our research data

We cannot automate, share, reproduce and reuse our methods

Software is ...

sometimes very prominent

sometimes a cog in a machine

sometimes invisible

But always important.

Rob van Nieuwpoort, 2022
