Key Features of Environmental Research Infrastructures

Interdisciplinarity highly relevant

Societal challenges need multidisciplinary methods

High importance to society, economy and resilience

High level of specialization requires RI to concentrate on their main tasks and user communities

Life

Specialized observation and analysis platforms

Air

Answering societal needs is only possible via collaboration

Observations often unique - huge datasets

Wide range of disciplines

and

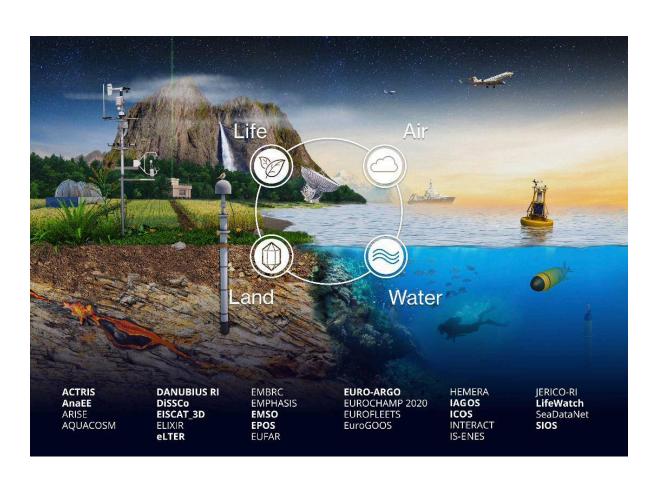

Water

Multiple infrastructures

Who We Are

ESFRI Cluster of Environmental Research Infrastructures

Environmental Research Infrastructures

- provide data and research products from all four sub-domains of the Earth system
- data are crucial European contributions to global-scale monitoring of the state of the Earth
- data are vital for assessing past and defining future policies, and for the development of environment-friendly innovations
- provide research data and services at EOSC through the ENVRI-Hub

The ENVRI Landscape in approximate numbers

7 operational RIs12 data portals300 asset suppliers10,000 researchers

20,000 researchers

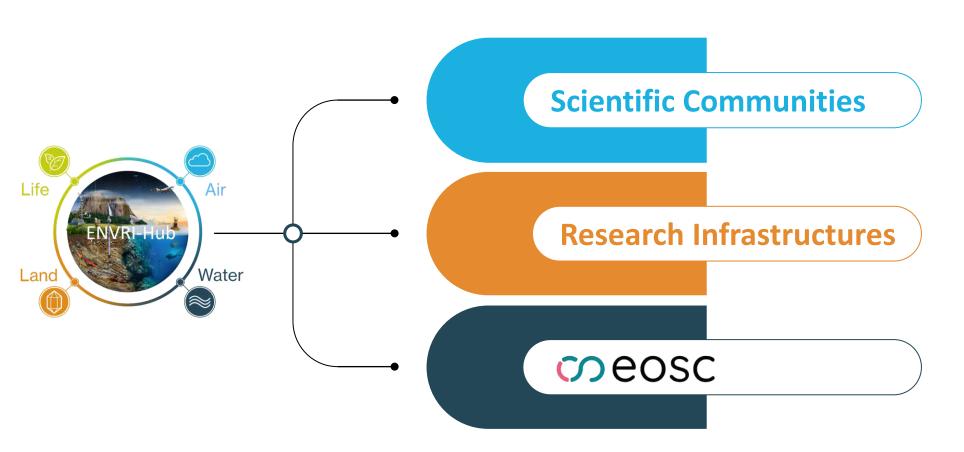

Developing the ENVRI Community

Target Groups for ENVRI Products and Services

Domain-scientists access ENVRI services directly via RI portals or APIs

Cross RI / subdomain access via ENVRI-Hub

RIs share knowledge and training resources across scientific domains and foster evolution of RIs

service ecosystem through the platform ENVRI-Hub guided by rich metadata

Thanks
