

eWaterCycle

Making it easy to use hydrological models

netherlands
eScience center

Peter Kalverla
November 17th, 2022

Hydrological models

Ingredients of a model

Forcing data

(rain & sunshine)

- Voluminous
- Various sources
- Time dependent
- Different formats
- ...

Ingredients of a model

Forcing data
(rain & sunshine)

- Voluminous
- Various sources
- Time dependent
- Different formats
- ...

Parameter sets
(soil type, land use, ...)

- Multiple sources
- Different formats
- Variable names
- Inconsistencies
- ...

Ingredients of a model

Forcing data
(rain & sunshine)

- Voluminous
- Various sources
- Time dependent
- Different formats
- ...

Parameter sets
(soil type, land use, ...)

- Multiple sources
- Different formats
- Variable names
- Inconsistencies
- ...

Model implementation
(computer code)

- Various programming languages
- Representation of processes
- Different variable names
- Numerics/discretization
- ...

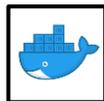

With eWaterCycle

Common model interface

No need to “learn” a
new model/language

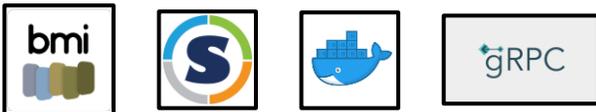

With eWaterCycle

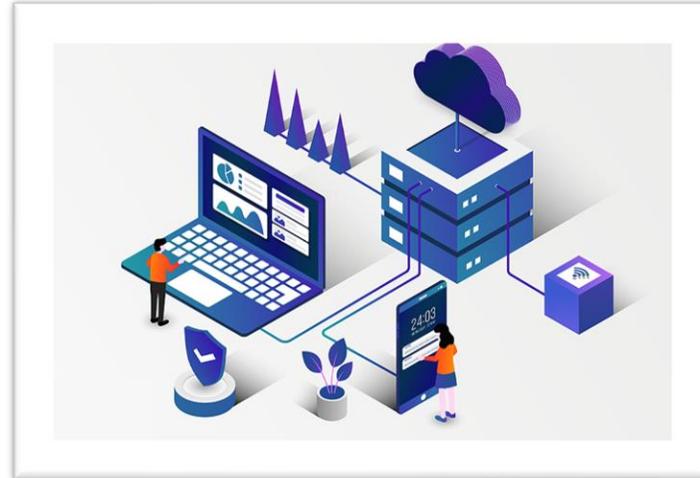

Common model interface

No need to “learn” a new model/language

Online modelling environment

No need to install or download anything

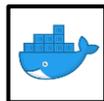

With eWaterCycle

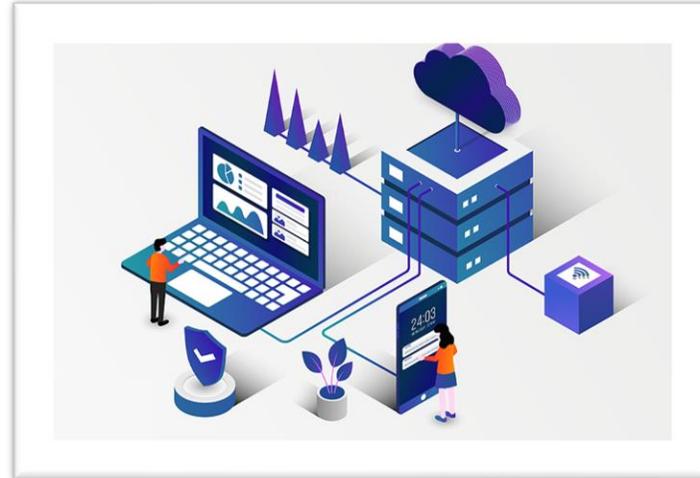

Common model interface

No need to “learn” a new model/language

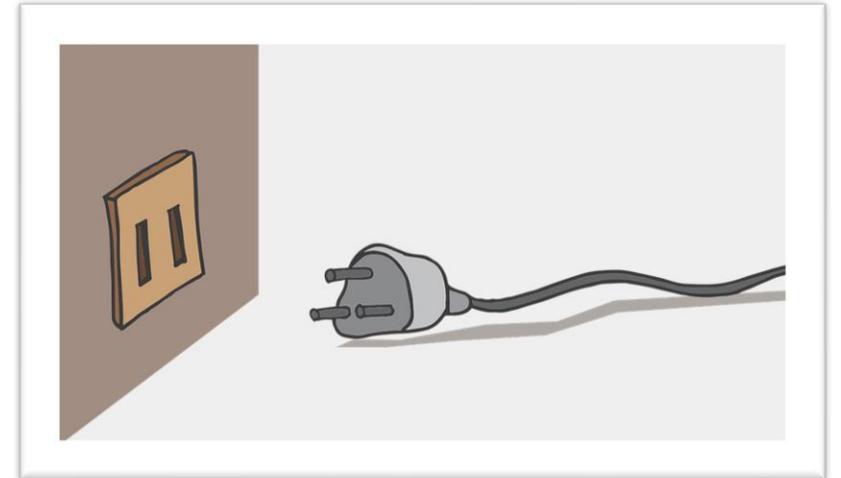

Online modelling environment

No need to install or download anything

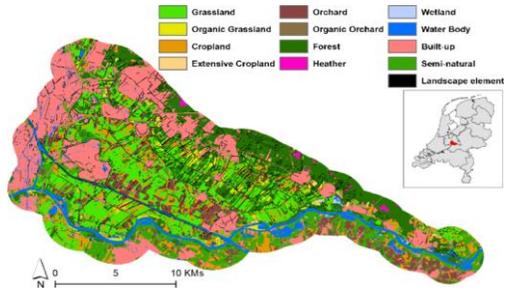

Build in preprocessing pipelines

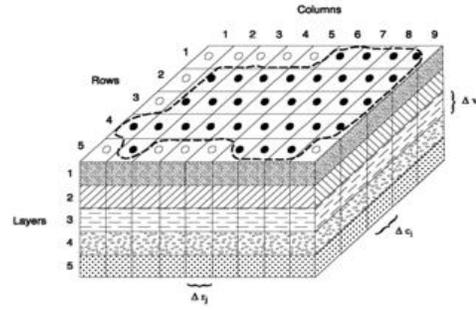

No need to worry about converting data to the right format

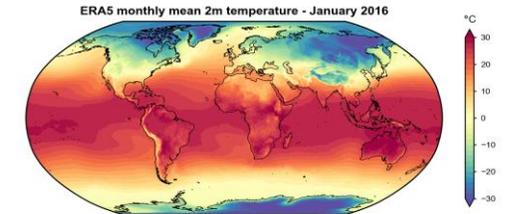

ewatercycle.parameter_sets

ewatercycle.models

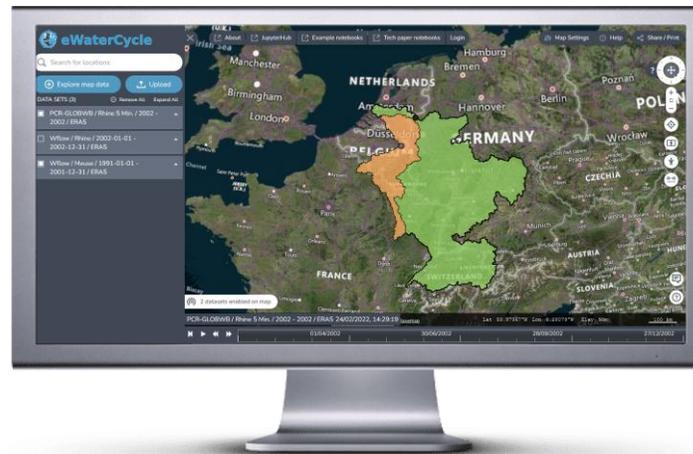

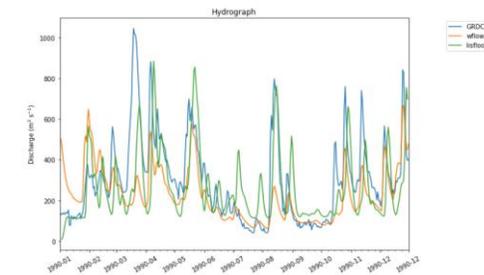

ewatercycle.forcing

ewatercycle.observations

ewatercycle.analysis

Conclusion

By removing barriers in
models and datasets

...eWaterCycle brings back
the joy in using hydrological
models

... for the benefit of science
and society

“Empowering
researchers across
all disciplines
through innovative
research software”
