

urbEN

print and play instructions

How to build your own urbEN set box?

All required visual and written documents can be downloaded from the Lotus website.

They come in 2 files:

- The game board;
- Other elements comprising:
 - o Rules of the game;
 - o Players' tokens (7 pieces per player);
 - o Actions' tokens (1 piece per action);
 - o Chance cards;
 - o Action's implementation form (40 copies for a game session);
 - o Players' guidelines,

The spreadsheet application must also be downloaded (make sure you get the latest version).

the game board

The 65x65 cm game board is available in 2 versions:

- One piece board fitting into A0 format;
- Four A3 sheets to be assembled.

Print the board on strong paper (180 g/m² at least) and in real size.

Check that boxes are 32x32 mm.

Foldable supports are available from specialized shops (for instance info@toutpourlejeu.com in France). We recommend to use the 4 parts cut out from the A3 sheets, much easier to glue than the 65x65 cm whole sheet. Use permanent spray glue.

Actions' and Players' tokens

Tokens may simply be printed on cardboard in "real size". But for a better look and durability we recommend to first print them (again in "real size" 32x32 mm) on strong paper and then paste the cut out tags on 2 or 3 mm thick plywood or MDF slabs.

Chance cards

Print the chance cards pdf sheets on strong paper or index card and cut them out.

Please note: there are no banknotes in the urbEN game as money transfers are made through the computer application.
