Motivation

Software publication

State of the art Software publication

```
model = getattr(spectra, spectrum_dict["type"])

if norm.unit in (u.Unit("erg"), u.Unit("erg cm-3")) and norm_type != "integral":
    raise NameError(
        "Normalisation different than 'integral' available only for 'spectrum_norm' in cm-3"
    )

# check the units of the normalisation
# cm-3 is the only one allowing more than one normalisation type
if norm.unit == u.Unit("cm-3"):
    if norm_type == "differential":
        final_model = model(norm, **spectrum_dict["parameters"])
    elif norm_type == "gamma=1":
        final_model = model.from_norm_at_gamma_1(
            norm, **spectrum_dict["parameters"])
    else:
        raise NameError("Invalid normalisation type")

agnpy

Nigro, Cosimo; Starek, Julian; Glinwy, Pawel; Sanchez, David; Craig, Matthew; Vuillaume, Thomas

agnpy is a python package focusing on the computation of the radiative processes of relativistic particles accelerated in the jets of Active Galactic Nuclei (AGN). It includes classes describing the galaxy components responsible for line and thermal emission and calculates the absorption due to gamma-gamma pair production on soft (R-UV) photon fields.

HERMES project

Scope

- 07/2021-06/2023
- Support RSEs in automatedly publishing software with rich metadata

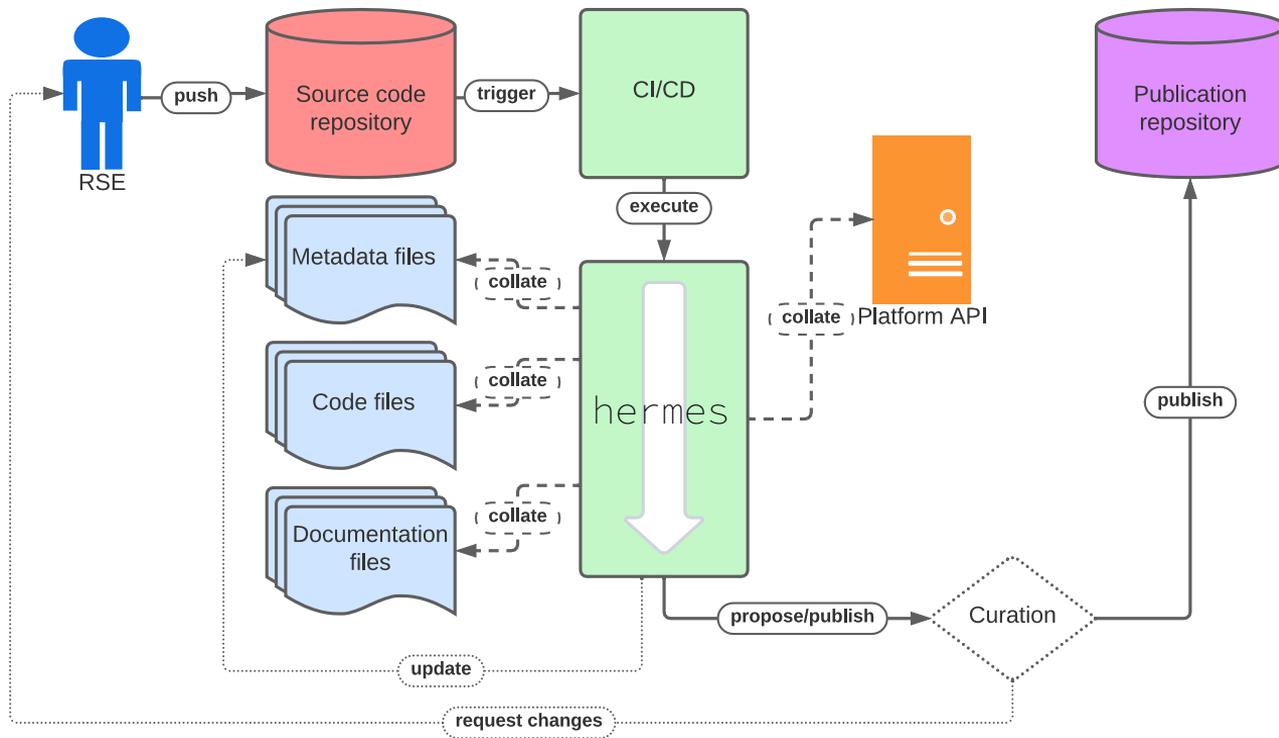

The user receives assistance in depositing software in an automated fashion. This may be used to create publications purely with rich metadata (to be at least FAIR [5], even for closed source software) or with attached artifacts like source code, executables, etc. (to be more easily reusable). To achieve this, HERMES provides

- an extensible, configurable and automatable toolchain with capability to be executed for¹⁵
 - N software publications in
 - M target publication repositories
 - from the same origin
 - as configured by the user,
- initially harvesting and collating **statically available metadata** from formerly described **metadata sources** and
- initially targeting
 - **InvenioRDM** and
 - **Dataverse project**
- for deposits of metadata and artifacts according to curator-defined requirements
- and output of the respective metadata in a structured format (e.g., **CodeMeta files**) for further reuse.

HERMES

Concept

HERMES

Metadata

- **Metadata**
 - Differences in generation, scope, mode, aspects
 - Generic software metadata vs. software-specific metadata
- **Metadata formats**
 - Metadata files, snippets, third-party systems, API responses
 - Structured vs. unstructured
- **Sources**
 - Collectable structured metadata
 - (Metadata from minable structured data)
 - (Metadata from minable unstructured data)

HERMES

Components

- **Software**
 - Software for software publication workflow automation (workflow runner + modular pipelines)
- **CI templates**
 - GitLab CI, GitHub Actions
- **Improved research software-readiness in publication repositories**
 - Position paper “research software-ready libraries”
 - Respective contributions to Dataverse + InvenioRDM (data models, UI)
- **Training materials**
 - Adaption of open Helmholtz training materials (HIFIS) to include workflow usage
- **Project website**
 - One-stop shop for information and documentation

HERMES

Where are we?

- Proof of concept prototype `hermes`
 - ✓ **Harvesting**
Citation File Format, CodeMeta, Git metadata
 - **Processing**
Add deduplication, validation.
 - **Curation/Deposition**
Metadata mapping and deposit for Invenio done. Enable more targets and user feedback.
 - ✗ **Post-processing**
Update `CITATION.cff/codemeta.json`.

HERMES

Next steps & future research

- Finalize beta demonstrator (06/2023 )
 - More metadata sources
 - Fully support Dataverse + InvenioRDM targets
- Improve usability ...
 - ... for RSEs: e.g., better user docs/configuration, CI templates
 - ... for infrastructure providers: e.g., better developer docs, plugin templates
- Improve quality
 - Improve current development practice, e.g., formalized code reviews
 - Implement standardized provenance tracking for metadata and processing
- Foster future development
 - E.g., clarify incentives (software citation), mentoring

Thank you!
