

Cos4Cloud

Co-designing Citizen Observatories Services
for the European Open Science Cloud

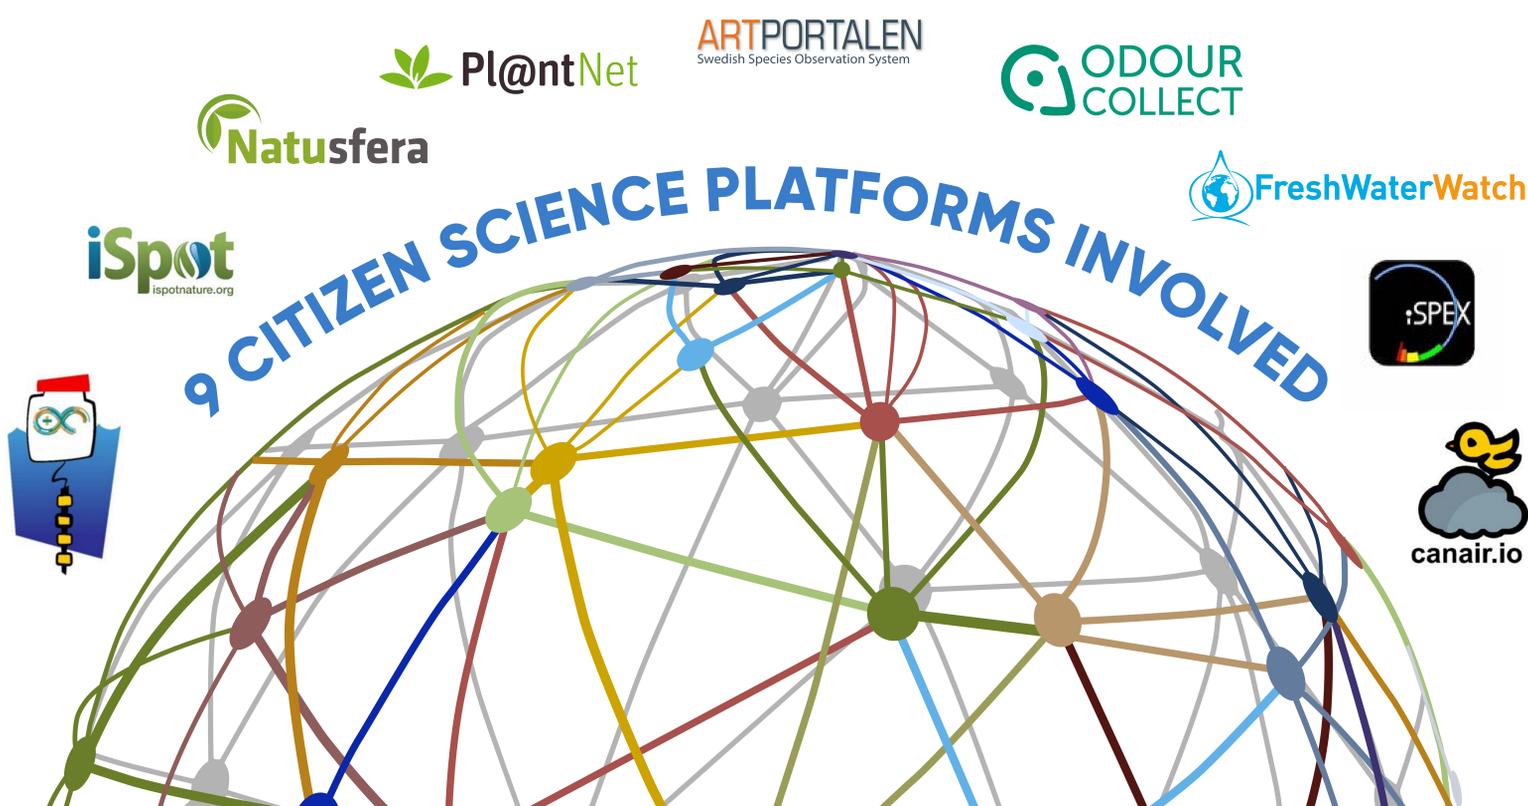

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 863463

Cos4Cloud is a project to boost citizen science technologies

Cos4Cloud aims to **co-design and develop thirteen technological services** to ensure the long-term viability of citizen science platforms -also known as citizen observatories- and help them reach a global scope. The services will be available on the new **European Open Science Cloud (EOSC)**, a virtual space aimed at the European scientific community.
