

# Circular tree style

---

*Version 1.0.3, by Giorgio Bianchini*

**Description:** Sets the plot actions to display the tree as a circular tree.

**Module type:** Action

**Module ID:** 1f3e0b88-c42d-417c-ba14-ba228be086a7

This module is used to apply to the currently opened tree the styles necessary to draw it in a "Circular" style.

The module will enable *Circular* Coordinates module, the *Branches* module (setting it up to draw the branches in a circular style) and the *Labels* module (setting it up to show the tip labels in a circular style). The current Coordinates module will be replaced, and all Plot actions will be removed.

## Further information

---

Here is an example of a tree drawn with the style that results from applying this Action module:
