

Switch children

Version 1.0.0, by Giorgio Bianchini

Description: Switches the order of the children of the node.

Module type: FurtherTransformation

Module ID: c4c71099-c7dc-44b3-93be-25a79afb1102

This module switches the children of a node, and, optionall, all their descendants.

Parameters

Node

Control type: Node

This parameter determines the node whose children are switched. If only a single node is selected, that node's children are switched. If more than one node is selected, the node whose children are switched corresponds to the last common ancestor (LCA) of all of them. Nodes are selected based on their `Name` .

Recursive

Control type: Check box

Default value: Unchecked

If this check box is checked, the action is also applied recursively to all descendas of the selected node. Otherwise, only the direct children of the selected node are switched.
