Annotation. Deep and thorough work on the moral education of preschool children is the basis of the formation of love for the motherland. In research conducted by scientists, patriotic education was seen as one of the aspects of moral education in the process of forming social ideas in children. The article covers this conclusion in detail.

Keywords: morality, upbringing, dignity, belonging.

It is known that the personality of a person is formed and develops under the influence of a large number of factors, objective and subjective, natural and social, internal and external, independent and independent, or depending on the Will and consciousness of people acting according to certain goals. At the same time, a person himself is not a passive being, he acts as a subject of his formation and development.

Before moving on to the problem of moral and patriotic education of preschool children, it is necessary to dwell in more detail on the concept of "education" as a central category of understanding the educational process, professional pedagogical activity in raising children and the entire subject. pedagogy in general. The true meaning of the concept of "upbringing" "is associated with the acuity of the word:" upbringing " is the feeding, feeding of a child who is not adapted to life, who has become completely helpless at birth.

Education is a purposeful activity carried out in the educational system, aimed at creating conditions for the development of the spirituality of students on the basis of universal values; helping them in self-determination of life, moral, civil and professional self-determination; creating conditions for the self-realization of an individual. Education is the targeted management of the process of Personality Development. Education in the educational sense is a purposeful activity specially organized to form and develop the consciousness and self - knowledge of the child, to form a moral position and strengthen in his behavior.

Education is always an organized activity of the child, involving him in an active relationship with the culture of his time, thereby filling the child's life with cultural meaning. Education is a system of professional activity of a teacher (teachers), which contributes to the maximum development of the personality of the child, the entry of the child into the context of modern culture, his formation as a subject and strategist of his own life worthy of a person.

Regardless of how the concept is expressed, many authors agree that education is characterized by the following important characteristics:

- purposefulness, that is, the general model, the presence of a socio-cultural badge;
- compliance of the process with socio-cultural values as achievements of the historical development of mankind;
- the presence of a certain system of organized influences;
- creating conditions for the child to master certain relationship norms;
- mastering a certain set of social roles by a person.

Patriotism can be described as love for the Motherland, its nature, people, culture, home. The purpose of raising preschool children in the spirit of patriotism is to sow and raise in the heart of the child the seeds of love for Nature, home and family, the history and culture of the country, which are created by the work of relatives and friends. Childhood is the daily discovery of the world, and therefore it is necessary to make sure that it first becomes knowledge of Man and the motherland, their beauty and greatness. Patriotism towards older preschool children is defined by researchers as the need to participate in all activities for the benefit of the surrounding people, wildlife, the presence of such qualities as compassion, empathy, self-esteem and awareness in children. as part of the world around themselves.

Moral and patriotic education of children, in a broad sense, with the help of various pedagogical tools, aims to instill in children an interest in the world around them, love for the Motherland, its heroic past. The formation of the foundations of patriotic education is one of the most important tasks of moral education.

The problem of patriotic education is one of the most difficult in pedagogy. Its complexity is primarily due to the very concept of patriotic education, the content of which is introduced at a certain time interval and determines the methods, tools and forms of working with children. It should be noted that patriotic education is always in demand. The complexity of solving this problem is primarily due to the age of children. It should be understood that in preschool age, no moral quality is fully formed - everything is now born. However, almost all moral qualities appear in preschool age.

Deep and thorough work on the moral education of preschool children is the basis of the formation of love for the motherland. In research conducted by scientists, patriotic education was seen as one of the aspects of moral education in the process of forming social ideas in children. In their works, great attention is paid to the formation of a positive attitude of children to various phenomena of our social reality, and the relationship between moral

and intellectual components is emphasized in this very area of moral education. personality stands out the most.

Such an interaction of feelings and consciousness is fully reflected in the concept of patriotic education of scientists. It is based on the integration of a patriotic feeling, which combines all aspects of the development of the individual: moral, labor, mental, aesthetic and physical into one whole. This allows us to talk about patriotism as a complex moral quality that involves a combination of feelings and consciousness in all forms of its manifestation. Scientists have shown that the basis of patriotic education is the mechanism of moral education. Hence, it can be assumed that the formation of patriotism is possible not only through knowledge, but also through emotions, especially in the early stages of the child's development. Many researchers have pointed out the need for a relationship between moral and patriotic education.

Moral and patriotic education can be considered one of the most difficult areas for a number of reasons:

- features of the preschool age period;
- versatility of the concept of "patriotism" in the modern world;
- lack of concept, theoretical and methodological developments.

The appeal to the heritage of fathers, the study of ancestral culture, folk history, its culture, in their opinion, brings up respect and love for their native land in preschool children, as well as pride in the ground on which they live. The spiritual and moral, patriotic education of the younger generation is undoubtedly one of the most urgent tasks of the current era. Moral and patriotic education is one of the most important elements of social consciousness, and it is precisely this that is the basis of the perfection of any society and state, the continuity of generations.
