

NFDI ToolTalk:

re3data - The place to be for research data repositories in NFDI

April 17, 2023, 4 p.m.

Nina Weisweiler

Helmholtz Association, Helmholtz Open Science Office / Helmholtz Metadata Collaboration / re3data COREF

https://doi.org/10.5281/zenodo.7837286

Global Registry of research data repositories...

...across all research disciplines

... presents **repositories** for the **permanent storage** and **access** of research data sets to researchers, funding bodies, publishers, scholarly institutions, and other service providers.

...promotes a culture of sharing, increased access and better visibility of research data.

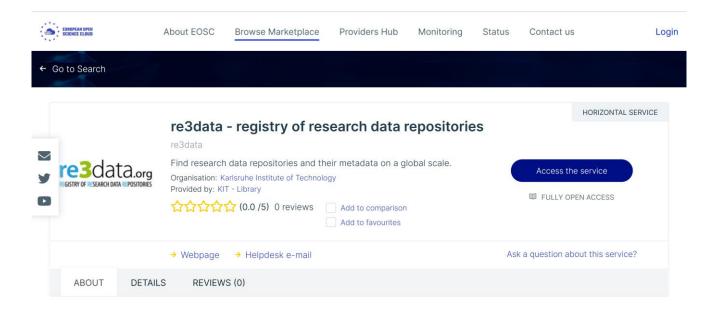

Networks and integrations

re3data is a **central reference point and metadata source** for other service providers on a global scale:

- OpenAIRE's Open Science Observatory
- European Open Science Monitor
- F-UJI Automated FAIR Data Assessment Tool
- DARIAH-EU Data Deposit Recommendation Service
- DataCite Commons
- . . .

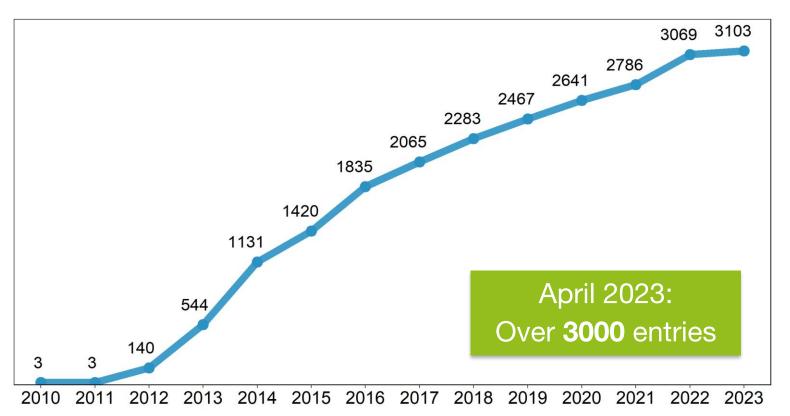

Connected via the EOSC Marketplace

re3data is a global registry of research data repositories that covers research data repositories from different academic disciplines. It includes repositories that enable permanent storage of and access to data sets to researchers, funding bodies, publishers, and scholarly institutions. re3data promotes a culture of sharing, increased access and better visibility of research data.

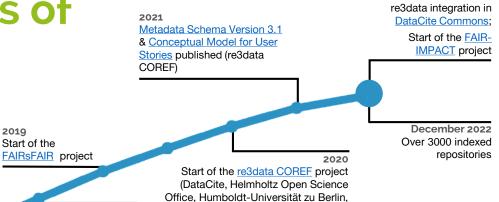

Number of repositories indexed in re3data per year:

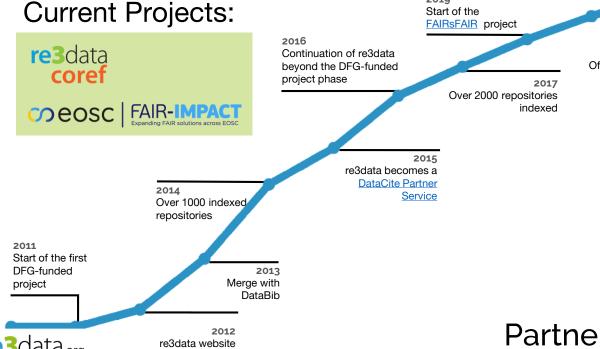

Celebrating 10 Years of re3data

Karlsruhe Institute of Technology)

goes live

2022

Partners:

Further develop & enhance re3data: re3data coref

Conceptual Service Model

 Embed the registry within the research community and infrastructure landscape to meet the emerging needs for a trusted repository reference.

Metadata Schema

 Revision and enhance the re3data metadata schema for the description of research data repositories.

Technical Infrastructure

- Implement new features and the updated metadata schema.
- Provide the necessary technical infrastructure and services.

Quality & Transparency

- Conduct a comprehensive study on quality assurances at research data repositories to improve re3data metadata information.
- Improve re3data metadata quality, trust and transparency.

Community Building

Extensive outreach activities, networking and policy development.

EU Projects with re3data participation

2019-2022:

Tools for finding and selecting FAIR enabling repositories to researchers and other stakeholders

Integration of repository information into DataCite Commons

- re3data as a metadata source
- Linking repositories with other entities of the PID graph

Launched in Summer 2022:

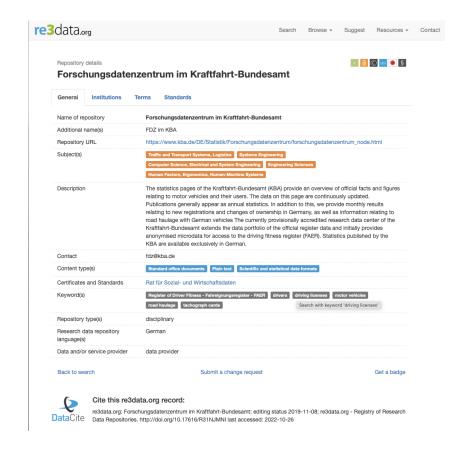

Practical implementation of the FAIR principles across all domains through FAIR-enabling practices, tools and services.

What is a "repository" in re3data?

- We refer to all re3data entries as "repositories":
 - Repositories in re3data are defined as "[...] a subtype of a sustainable information infrastructure providing long-term storage of and access to research data."(Metadata Schema for the Description of Research Data Repositories, Version 3.1)
- The re3data registration policy is intentionally inclusive to cover a broad range of infrastructures for research data.

re3data.org Registration Policy

To be registered in re3data.org a research data repository must

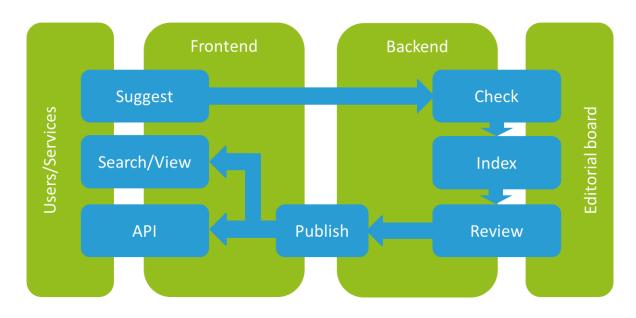

- be run by a legal entity, such as a sustainable institution (e.g. library, university)
- clarify access conditions to the data and repository as well as the terms of use
- have focus on research data

A research data repository is a subtype of a sustainable information infrastructure which provides long-term storage and access to research data that is the basis for a scholarly publication. Research data means information objects generated by scholarly projects for example through experiments, measurements, surveys or interviews.

Subject(s)		Humanities and Social Sciences			
Description		Swedish National Data Service (SND) is a research data infrastructure designed to assist researchers in preserving, maintaining, and disseminating research data in a secure and sustainable manner. The SND Search function makes it easy to find, use, and cite research data from a variety of scientific disciplines. Together with an extensive network of almost 40 Swedish higher education institutions and other research organisations, SND works for increased access to research data, nationally as well as internationally.

Input: Required information

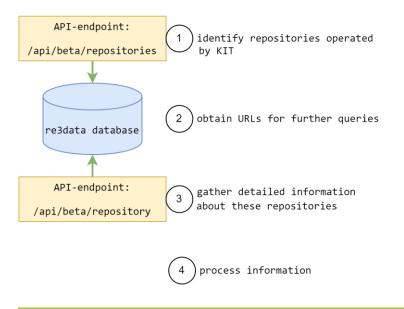

Output: Querying the re3data API

- re3data metadata is available under a CC0 via an open API and a GUI: https://www.re3data.org/search
- In our GitHub repository, we show examples for using the re3data API that can be adapted to fit other use cases:

https://github.com/re3data/using_theere3data_API

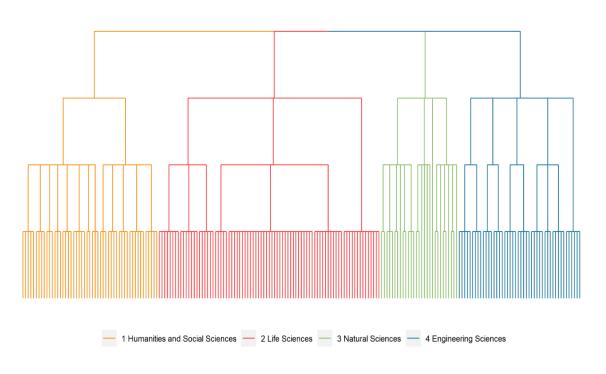

Schematic overview of a possible query process:

Subject classification: Gaining an overview

re3data applies the <u>DFG</u>
<u>Subject Areas</u> to...

- describe repositories in adequate depth, enabling users to find an RDR that suits their specific needs.
- create separation between repositories, enabling users to distinguish RDR based on their disciplinary focus.

Visit our <u>blog</u> for more information!

Icons: Facilitating the selection process of suitable research data repositories

Research data repositories: Essential infrastructures for FAIR data management

RDR generate, consolidate and maintain metadata, ensuring that valuable research data can be systematically reused over the long term.

Challenges:

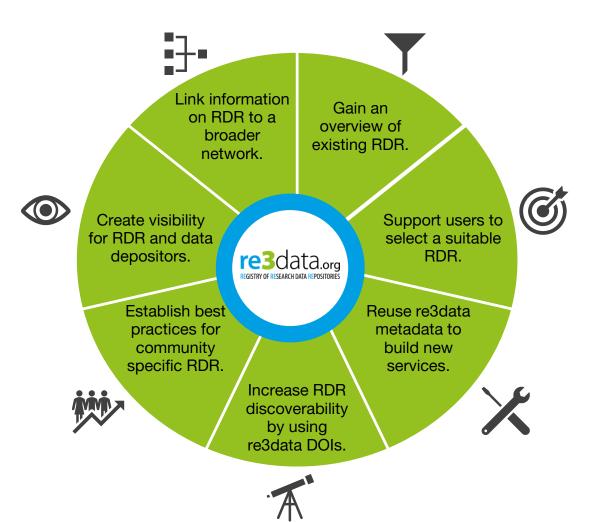

- Practices and customs in RDM vary widely across research disciplines.
- A multitude of tools and services makes it harder for users to find and choose what they need.
- Users are confronted with scattered and unstructured information.

re3data can help the NFDI solve these challenges:
