When Institutions Fail, Communities Get Busy: Putting Open Scholarly Data in the Hands of People Who Care.

Force 11 2023.

Tonight's Talk

- DIY Looping and #wearenotwaiting
- The Curtin Open Knowledge Initiative (COKI)

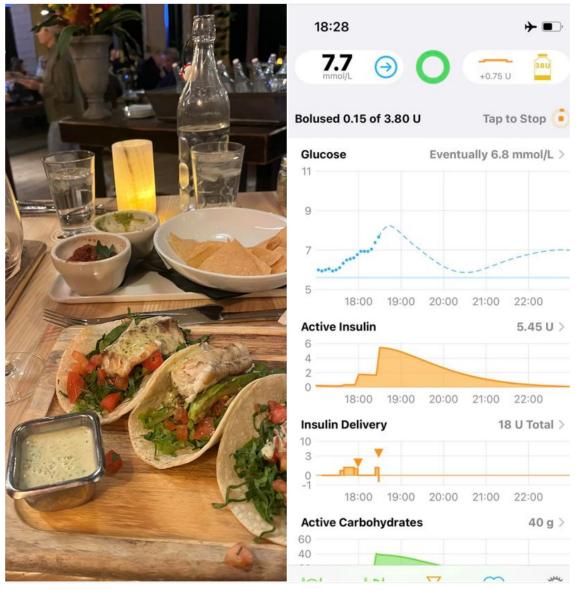

Yesterday Katie DiSimone passed away from glioblastoma. Looped and the wider diabetes world lost a leading light, mentor and friend. Katie's work on Loopdocs, Looptips, and her blog, plus her personal support in the Looped group helped me on my DIY looping journey and inspired me to be active in the community (#wearenotwaiting).

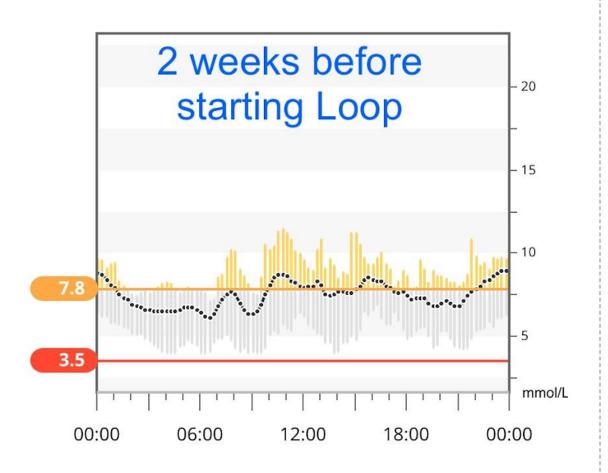

Before I started looping, I was on the fence about having a second child. After having James in 2015, I developed postpartum thyroiditis. For the ne... See more

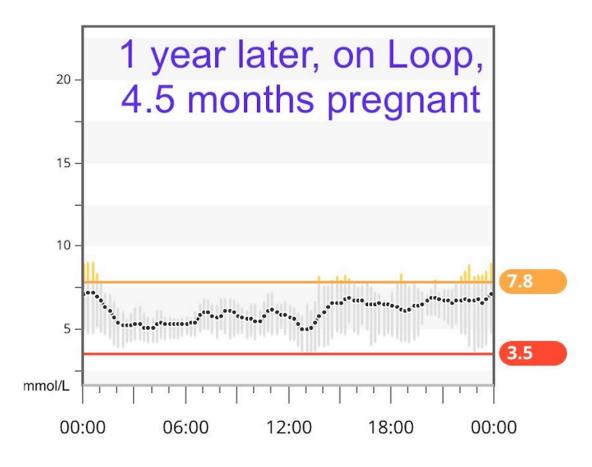

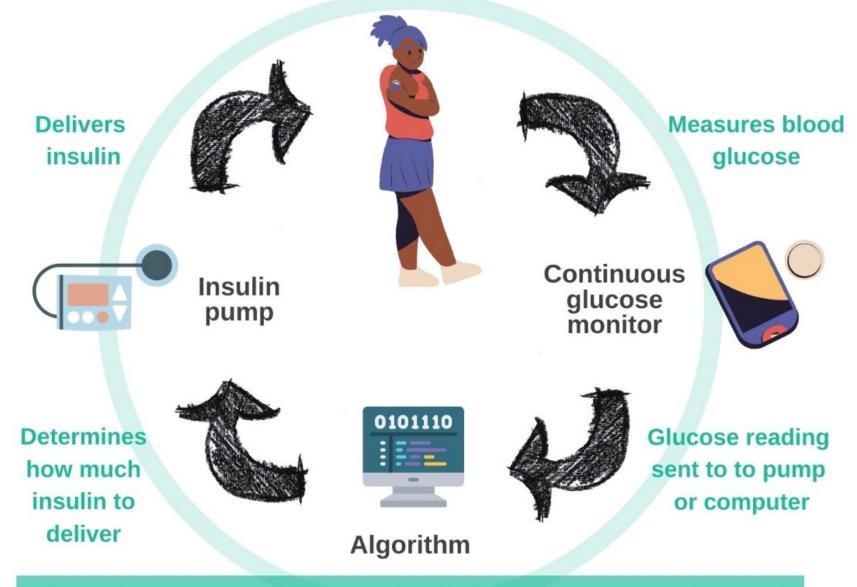

Catching up on #WDD2022 posts because last night got away from me! Before my delicious fish taco dinner arrived on the table, I had a little rise from snacking on really great fresh tortilla chips, salsa and guacamole. The tacos had fresh corn tortillas (rather than flour) so I wasn't quite sure how they might hit me. I gave a slightly conservative bolus.

How does a closed-loop artificial pancreas system work?

After our story ran, Bloomberg went back to the parents, coders and hobbyists who worked to hack together an artificial pancreas, and learn more about how they did it. It's the first episode in our first season of Prognosis, a podcast about people living on the edge of medical innovation. You can listen here.

Arnold Kadish's first closed-loop insulin pump device

Clinical Pharmacy Therapeu, Volume: 35, Issue: 2, Pages: 127-138, First published: 05 March 2010, DOI: (10.1111/j.1365-2710.2009.01048.x)

The Long, Long Wait for a Diabetes Cure

A documentary captures the desperation and frustration of Type 1 diabetes patients in a clinical trial.

⊕ English Edition ∨

By Aaron Saenz > July 7, 2010

The Artificial Pancreas is actually a combination of internal alucose monitor An 'artificial pancreas' developed with funding from the

Juvenile Diabetes Research Foundation (JDRF) could allow diabetics to control their blood sugar automatically. Consisting of an insulin pump, continuous glucose monitor, and advanced control software, the artificial pancreas is part implant and part worn device. It will monitor blood sugar and vary insulin levels without a patient's need for constant calculation and adjustments. According to recent presentations at the American Diabetes Association Scientific Sessions in Florida, the artificial pancreas has shown great aptitude for treating diabetes overnight and

after large meals - difficult times for many diabetics. The device may prove to be the best

Artificial Pancreas Will Become Reality Within 2 Years

Veronica Hackethal, MD July 07, 2016

Not Waiting for ...?

The folks involved summarize the movement with this powerful list:

#WeAreNotWaiting to bridge disconnected data islands.

#WeAreNotWaiting while our endocrinologist tries to assemble the disjointed pieces of the data puzzle.

#WeAreNotWaiting for competitors to cooperate.

#WeAreNotWaiting for regulators to regulate.

#WeAreNotWaiting for device manufacturers to innovate.

#WeAreNotWaiting for payers to pay.

#WeAreNotWaiting for peace of mind that our children with type 1 diabetes are safe.

#WeAreNotWaiting to get some decent sleep for the first time in years.

#WeAreNotWaiting for our child to be able to safely have a sleepover at friend's house.

#WeAreNotWaiting to give our child a better chance to succeed at school.

#WeAreNotWaiting for others to decide if, when, and how we access and use data from our own bodies.

#WeAreNotWaiting to build applications that focus on design and usability.

 $\textit{\#WeAreNotWaiting} \ \text{to compel device makers to publish their data protocols}.$

#WeAreNotWaiting to insist that patients have access to their own diabetes data.

#WeAreNotWaiting to allow PWDs to have a choice in how they see their own diabetes data, and not be forced to use substandard software that comes with their device.

#WeAreNotWaiting to make it easier to get data off of devices.

#WeAreNotWaiting to bring together the best and brightest minds from around the world to help make things better for PWDs.

#WeAreNotWaiting for the cure.

Hybrid closed loop (or artificial pancreas) systems monitor and an insulin pump with a control algo amount of insulin, automa

NICE recommends hybrid closed loop tech for diabetics

The National Institute for Health and Care Excellence (NICE) is recommending the use of official hybrid closed loop systems to help patients with type 1 diabetes manage their blood glucose levels.

NICE has published new draft guidance for patients in England and Wales. It says that around 105,000 people in England are set to be offered the 'artificial pancreas' technology, which will allow them to go about their lives without having to continually monitor their blood glucose levels.

Murdoch University has plunged down the global university rankings, falling behind Edith Cowan University for the first time in its history.

Murdoch dropped to 501-600th position in the Times Higher Education's annual rankings after holding strong to 401-500th position for five years.

Open Knowledge Institutions

Reinventing Universities

By Lucy Montgomery, John Hartley, Cameron Neylon, Malcolm Gillies, Eve Gray, Carsten Herrmann-Pillath, Chun-Kai (Karl) Huang, Joan Leach, Jason Potts, Xiang Ren, Katherine Skinner, Cassidy R. Sugimoto and Katie Wilson

The future of the university as an open knowledge institution that institutionalizes diversity and contributes to a common resource of knowledge: a manifesto.

Endorsements

"Can the contemporary university be reinvented with openness at its core, developing and sharing knowledge in service to the global public interest? The authors of *Open Knowledge Institutions* argue compellingly that such reinvention is not just possible but necessary, and they provide a crucial map of the work required to make it so."

Kathleen Fitzpatrick, Director of Digital Humanities and Professor of English, Michigan State University; author of Generous Thinking: A Radical Approach to Saving the University

"This book provides nuanced discussion around the moral, logistical, and practical challenges associated with embedding open science principles in public research organizations. With every syllable, I was nodding in agreement."

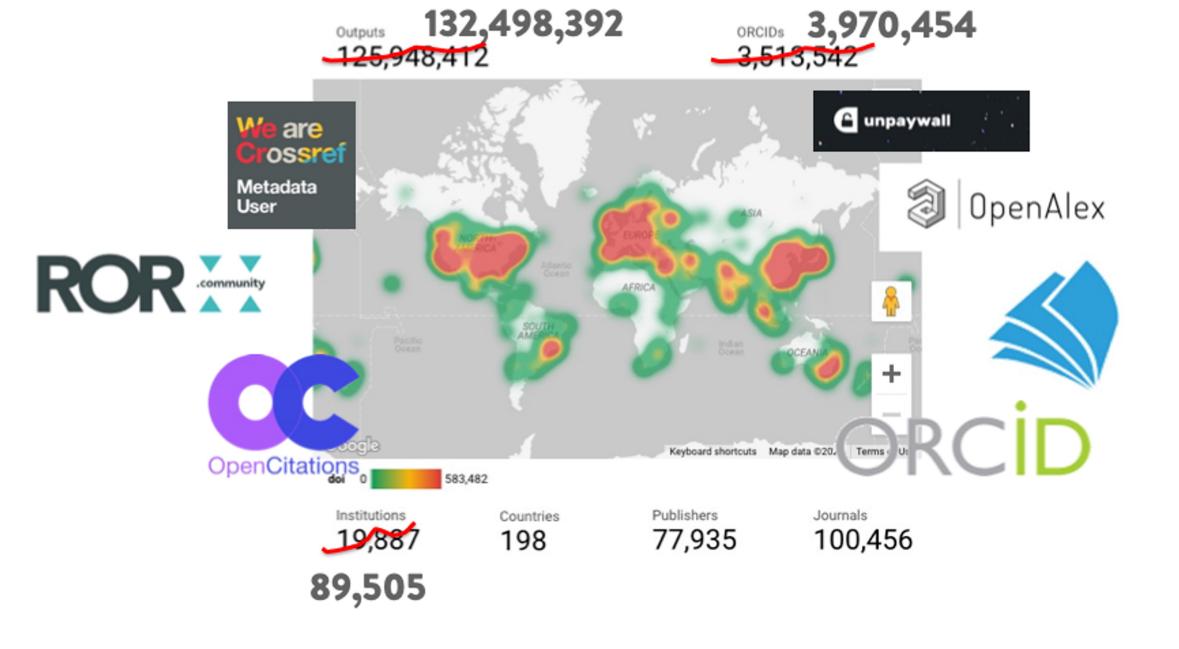

Gemma Derrick, Senior Lecturer in Higher Education, Lancaster University

"Laced with incisive case studies, this welcomed manifesto amounts to a fearless application of practical wisdom to revitalize the university by having it serve as a knowledge commons."

John Willinsky, Khosla Family Professor of Education, Stanford University

The Principles of Open Scholarly Infrastructure

Governance

- Coverage across the research enterprise it is increasingly clear that research transcends disciplines, geography, institutions and stakeholders. The infrastructure that supports it needs to do the same.
- Stakeholder Governed a board-governed organisation drawn from the stakeholder community builds more confidence that the organisation will take decisions driven by community consensus and consideration of different interests.
- **Non-discriminatory membership** we see the best option as an "opt-in"
